Contents

1 Options - Optionals **1**

1.1 Optional Subjects CTS: Communication Technology and Communication Systems . . . 1

Proseminar Electrical Engineering and Information Technology . . . 1

Proseminar Electrical Engineering and Information Technology . . . 3

Proseminar Electrical Engineering and Information Technology . . . 4

Proseminar Electrical Engineering and Information Technology . . . 5

Communication Technology II . . . 6

Digital Signal Processing . . . 8

Information Theory II . . . 9

Mobile Communications . . . 10

Speech and Audio Signal Processing . . . 12

Digital Signal Processing Lab . . . 14

Multimedia Communications Lab II . . . 15

Multimedia Communications Project Seminar II . . . 17

Project Seminar Wireless Communications . . . 19

Multimedia Communications Seminar II . . . 20

Adaptive Filters . . . 22

Advanced Topics in Statistical Signal Processing . . . 24

Antennas and Adaptive Beamforming . . . 26

Fundamentals of Signal Processing . . . 28

Microwave Engineering I . . . 30

Information Theory I . . . 32

Convex Optimization in Signal Processing and Communications . . . 33

Microwave Engineering II . . . 35

MIMO - Communication and Space-Time-Coding . . . 37

Laboratory Communication and Sensor Systems . . . 39

Multimedia Communications Project II . . . 41

Project Seminar Communication and Sensor Systems . . . 43

Project Seminar Communication and Sensor Systems . . . 44

Project Seminar Communication and Sensor Systems . . . 45

Project Seminar Communication and Sensor Systems . . . 46

Project Seminar Emerging Topics in Sensor Array and Multichannel Processing . . . 47

Advanced Seminar on Networking, Security, Mobility, and Wireless Communications . . . 48

Wireless Network for Emergency Response: Fundamentals, Design, and Build-up from Scratch . . . 50

Internet - Practical Course Telecooperation . . . 52

Communication Networks I . . . 54

Mobile Networking . . . 56

Multimedia Communications Lab I . . . 58

Practical Project Telecooperation . . . 60

Multimedia Communications Project I . . . 62

Network, Traffic and Quality Management for Internet Services . . . 64

Multimedia Communications Seminar I . . . 66

Seminar Smart City . . . 68

Software Defined Networking . . . 69

Seminar Telecooperation . . . 71

TK1: Distributed Systems and Algorithms . . . 72

Ubiquitous computing in business processes . . . 74
Radar Techniques . . . 76
Computer Networks and Distributed Systems . . . 77
TK2: Human Computer Interaction . . . 79
Microwave Measurement Technologies . . . 81
Sensor Array Processing and Adaptive Beamforming . . . 83
Machine Learning in Information and Communication Technology (ICT) . . . 85
Robust Data Science With Biomedical Applications . . . 87
Robust and Biomedical Signal Processing . . . 89
TK3: Ubiquitous / Mobile Computing . . . 91
Optical Communications - Components . . . 93
International Summer School 'Microwaves and Lightwaves' . . . 95
IoT and wireless protocols in embedded systems . . . 96
Data Science I . . . 97
Project Seminar Communication and Sensor Systems . . . 99
Graph signal processing, learning and optimization . . . 100
Control of Distributed Cyber-Physical Systems . . . 102
Optimization in Multi-Agent Systems . . . 104
Transport Protocols and their Design . . . 106
One World Signal Processing Seminar Series . . . 107
Application-Layer Protocols on the Internet . . . 109
1.2 Optional Subjects SES: System on Chip and Embedded Systems . . . 110
Proseminar Electrical Engineering and Information Technology . . . 110
Proseminar Electrical Engineering and Information Technology . . . 111
High-Level Synthesis . . . 112
Low-Level Synthesis . . . 114
Microprocessor Systems . . . 116
Advanced Integrated Circuit Design Lab . . . 118
HDL Lab . . . 119
Projektseminar Rekonfigurable Systems . . . 120
Seminar Integrated Electronic Systems Design A . . . 121
Computer Aided Design for SoCs . . . 122
Analog Integrated Circuit Design . . . 124
Digital Design Lab . . . 125
Industrial Colloquium . . . 126
Labs on Computer Engineering . . . 128
Printed Electronics . . . 129
Project Seminar Integrated Electronic Systems . . . 130
Project Seminar Computer Systems . . . 131
Embedded Systems Hands-On 1: Design and Implementation of Hardware-Software Systems . . . 132
Embedded Systems Hands-On 2: Designing Hardware Accelerators for Systems-on-Chip . . . 134
Sensor Technique . . . 135
Advanced Topics in Embedded Systems and Applications . . . 136
Mastering Modern Embedded System Processors . . . 138
Practical Programming of FPGAs using High-Level Languages . . . 140
Seminar: Integrated Electronic Systems Design B . . . 142
Modelling and simulation of circuits . . . 143
Industrial Electronics . . . 145
1.3 Optional Subjects SWE: Software-Engineering . . . 147
Proseminar Electrical Engineering and Information Technology . . . 147
Advanced Compiler Construction . . . 148
Optimizing Compiler Project . . . 150
Seminar Software System Technology . . . 151
C/C++ Programming Lab . . . 152

Real-Time Systems . . . 154
Formal Principles of Computer Science III . . . 156
Concepts of Programming Languages . . . 157
Compiler Construction Lab . . . 159
Autonomous Driving Lab I . . . 161
Autonomous Driving Lab II . . . 163
Projektseminar Software Systems . . . 165
Modeling, Specification and Semantics . . . 167
Introduction to Compiler Construction . . . 169
Static and Dynamic Program Analysis . . . 171
Software Engineering for Artificial Intelligence . . . 173
Multithreading in C++ . . . 175
Advanced Multithreading in C++ . . . 176
Data Management - Extended Lab . . . 177
Data Management - Lab . . . 179
Scalable Data Management Systems . . . 181
Advanced Data Management Systems . . . 183

2 Applications 184
2.1 Optional Subjects AIS-AS: Automotive Systems . . . 184
Ride and Handling . . . 184
Automotive Mechatronics and Assistance Systems . . . 186
System Dynamics and Automatic Control Systems I . . . 188
Technical Thermodynamics I . . . 190
Trends in Automotive Engineering . . . 192
ADP (4 CP) Internal Combustion Engines and Powertrain Systems . . . 193
ADP (6 CP) Automotive Engineering . . . 194
Tutorial Automotive Engineering . . . 195
Optical Technologies in Car Lighting . . . 196
Avionics System Safety . . . 197
Combustion Engines I . . . 198
Technical Mechanics for Electrical Engineering . . . 200
Motor Vehicles . . . 202
Laboratory Control Engineering I . . . 204
Laboratory Matlab/Simulink I . . . 205
Project seminar Applications of Lighting Engineering . . . 206
Project seminar Advanced Applications of Lighting Engineering . . . 207
Project seminar Special Applications of Lighting Engineering . . . 208
Fundamentals of Navigation I . . . 210
Space Debris - Risks, Surveillance and Mitigation . . . 211
Tutorial Advanced Cax Methods . . . 213
Combustion Engines II . . . 214
Automated Driving . . . 216
2.2 Optional Subjects AIS-IA: Intelligent Systems and Algorithms . . . 218
Natural Language Processing and the Web . . . 218
Web-Mining . . . 220
Practical Lab Algorithms . . . 223
Practical Course in Artificial Intelligence . . . 224
Data Mining and Machine Learning . . . 226
Seminar Data Mining and Machine Learning . . . 228
Statistical Machine Learning . . . 230
Deep Learning for Natural Language Processing . . . 232
Project Lab Deep Learning in Computer Vision . . . 233
Learning and Educational Technologies . . . 234

Algorithmic Modelling . . . 236
Efficient Graph Algorithms . . . 238
Practical Lab Advanced Algorithms . . . 240
Fuzzy Logic, Neural Networks and Evolutionary Algorithms . . . 241
Concepts and Technologies for Distributed Systems and Big Data Processing . . . 243
Foundations of Language Technology . . . 245
Bioinformatics . . . 247
Optimization Algorithms . . . 248
Information Management . . . 249
Ambient Intelligence . . . 252
Automata, Formal Languages and Decidability . . . 254
Propositional Logic and Predicate Logic . . . 256
Extended Seminar - Systems and Machine Learning . . . 258
Deep Learning: Architectures & Methods . . . 260
Reinforcement Learning: From Foundations to Deep Approaches . . . 262
Text Analytics . . . 264
Matrix Analysis and Computations . . . 265
Algorithmic modeling for creating schedules . . . 267
Machine Learning and Deep Learning for Automation Systems . . . 269
Deep Generative Models . . . 271
Introduction to Scientific Computing with Python . . . 272
Fundamentals of Reinforcement Learning . . . 274
Introduction to Artificial Intelligence . . . 276
Introduction to Quantum Computing . . . 278
2.3 Optional Subjects AIS-IE: Information Processing in Electrical Power Engineering . . . 280
Advanced Power Electronics . . . 280
Real Time Applications and Communication with Microcontrollers and programmable Logic Devices . . . 282
Power Systems II . . . 284
Energy Converters - CAD and System Dynamics . . . 286
Power Laboratory I . . . 288
Power Laboratory II . . . 290
Application, Simulation and Control of Power Electronic Systems . . . 291
Energy Management and Optimization . . . 293
Electromagnetic Compatibility . . . 295
Electrical Power Engineering . . . 297
Large Generators and High Power Drives . . . 299
High Voltage Measuring Techniques . . . 300
Overvoltage Protection and Insulation Coordination in Power System . . . 303
Power Systems I . . . 305
Electrical Machines and Drives . . . 306
Power Electronics . . . 308
High Voltage Switchgear and Substations . . . 310
High Voltage Technology I . . . 311
High Voltage Technology II . . . 313
New Technologies of Electrical Energy Converters and Actuators . . . 315
Design of Electrical Machines and Actuators with Numerical Field Calculation . . . 317
Physics and Technology of Accelerators . . . 318
Machine Learning & Energy . . . 319
Electric Railways . . . 321
Virtual Prototyping of Electric Drives . . . 322
2.4 Optional Subjects AIS-MT: Medical Technics . . . 324
Fuzzy Logic, Neural Networks and Evolutionary Algorithms . . . 324
Visualization in Medicine . . . 326
Current Trends in Medical Computing . . . 328

Computer-aided planning and navigation in medicine . . . 330
Microsystem Technology . . . 332
Sensor Technique . . . 333
Evolutionary Systems - From Biology to Technology . . . 334
Computational Modeling for the IGEM Competition . . . 335
Medical Image Processing . . . 337
Signal Detection and Parameter Estimation . . . 339
Sensor Signal Processing . . . 341
Measuring Technique . . . 342
Bioinformatics . . . 344
Analysis and Synthesis of Human Movements I . . . 345
Deep Learning for Medical Imaging . . . 346
Computational Methods for Systems and Synthetic Biology . . . 347
Deep Generative Models . . . 349
Basics of Biophotonics . . . 350
Artificial Intelligence in Medicine . . . 352
Bioinformatics I . . . 354
2.5 Optional Subjects AIS-CSR: Control Systems and Robotics . . . 356
Optimal and Predictive Control . . . 356
Foundations of Robotics . . . 358
Modeling and Simulation . . . 360
System Dynamics and Automatic Control Systems II . . . 361
System Dynamics and Automatic Control Systems III . . . 363
Integrated Robotics Project 1 . . . 365
Integrated Robotics Project 2 . . . 367
Robot Learning: Integrated Project - Part 1 . . . 369
Robot Learning: Integrated Project - Part 2 . . . 370
Laboratory Control Engineering II . . . 371
Laboratory Matlab/Simulink II . . . 372
Project Course Control Engineering . . . 373
Project Seminar Robotics and Computational Intelligence . . . 374
Robust Control . . . 376
Computational Engineering and Robotics . . . 377
Practical Training with Drives . . . 379
Acceleration of Charged Particles in Electromagnetic Fields (only for information) . . . 380
Control of Drives . . . 381
Digital Control Systems II . . . 383
Technical Mechanics for Electrical Engineering . . . 384
System Dynamics and Automatic Control Systems I . . . 386
Measuring Technique . . . 388
Electromechanical Systems I . . . 390
Introduction to Electrodynamics . . . 391
Railway Vehicle Engineering . . . 392
Identification of Dynamic Systems . . . 393
Robot Learning . . . 395
Controller Design for Multivariable Systems in State Space . . . 397
New Technologies of Electrical Energy Converters and Actuators . . . 398
Design of Electrical Machines and Actuators with Numerical Field Calculation . . . 400
Physics and Technology of Accelerators . . . 401
Actuators for Mechatronic Systems Laboratory . . . 402
Electromechanical Systems Lab . . . 403
Laboratory Matlab/Simulink I . . . 404
Laboratory Control Engineering I . . . 405
Planning and Application of Electrical Drives (Drives for Electric Vehicles) . . . 406

Project Seminar Automatic Control Systems . . . 407
Project Course Practical Application of Mechatronics . . . 408
Computational Electromagnetics and Applications III . . . 409
Optimization of static and dynamic systems . . . 410
Computer Aided Design (CAD) . . . 412
Fundamentals of Navigation I . . . 414
Machine Learning and Deep Learning for Automation Systems . . . 415
Tutorial Advanced Cax Methods . . . 417
Hands-On HCI . . . 418
Model Predictive Control and Machine Learning . . . 420
2.6 Optional Subjects AIS-SS: Secure Systems . . . 422
Embedded System Security . . . 422
IT Security . . . 424
Physical Layer Security in Wireless Systems . . . 426
Secure Mobile Systems . . . 428
Lab Exercise on Secure Mobile Networking . . . 430
Project on Secure Mobile Networking . . . 432
Introduction to Cryptography . . . 434
Computer Security . . . 436
Formal Methods for Information Security . . . 438
Network Security . . . 440
Public Key Infrastructures . . . 442
Security of Critical Infrastructures . . . 445
Seminar on Networking, Security, Mobility, and Wireless Communications . . . 447
Security in Multimedia Systems and Applications . . . 449
Safty of railway signaling systems . . . 451
Real World Cryptography . . . 452
Practical Lab on System and IoT Security . . . 453
Cybersecurity Lab . . . 454
Protection in Networked Systems - Trust, Resilience, and Privacy . . . 455
Protection in Infrastructures and Networks . . . 457
Cryptographic Protocols . . . 458
Mobile Security . . . 459
Lab Peace-, Security and Crisis Informatics . . . 461
Crisis, Security and Peace Technologies . . . 463
Lab Blockchain . . . 465
Safety-Critical Human-Computer-Interaction . . . 466
Information Technology for Peace and Security . . . 469
Information Security Management . . . 471
Side-channel resilient cryptography . . . 473
2.7 Optional Subjects AIS-VC: Visual Computing . . . 475
Capturing Reality . . . 475
Computer Vision I . . . 477
Computer Vision II . . . 479
Computer Graphics I . . . 481
Geometric Methods of CAE/CAD . . . 483
Programming Massively Parallel Processors . . . 485
Advanced Visual Computing Lab . . . 487
Virtual and Augmented Reality . . . 488
Hardware Design for Video Processing . . . 490
3D Animation & Visualization . . . 491
Ambient Intelligence . . . 493
Image Processing . . . 495
Computer Vision in Engineering . . . 497

Visual Computing . . . 499
Computer Graphics II . . . 501
Information Visualization and Visual Analytics . . . 503
Probabilistic Graphical Models . . . 505
Visual Computing Lab . . . 507
Scale Space and PDE methods in image analysis and processing . . . 508
Serious Games Project . . . 510
Serious Games Seminar . . . 512
Visual Analytics: Interactive Visualization of Very Large Data . . . 514
Visualization and Animation of Algorithms and Data Structures . . . 515
Serious Games . . . 517
Applied Topics in Computer Graphics . . . 519
User-Centered Design in Visual Computing . . . 521
Advanced User Interfaces . . . 523
Physically based Simulation and Animation . . . 524
Hands-On HCI . . . 525
2.8 Optional Subjects AIS-EC: Economics . . . 527
Introduction to Business Administration . . . 527
Introduction to Economics (V) . . . 529
Financial and Management Accounting . . . 530
Accounting and Finance . . . 532
Management and Marketing . . . 534
Operations Research / Production and Supply Chain Management . . . 536
Macroeconomics . . . 538
Economic and financial policy . . . 540
Economic Policy . . . 542
Management Accounting . . . 544
IT Project Management/ IT Project Management - practical course . . . 546
Technology and Innovation Management . . . 548
Introduction to Innovation Management . . . 550
2.9 Optional Subjects AIS-EI: Entrepreneurship and Management . . . 552
Introduction to Entrepreneurship . . . 552
Technology and Innovation Management . . . 554
Introduction to Innovation Management . . . 556
Introduction to Business Administration . . . 558
Introduction to Law . . . 560
Venture Valuation . . . 561
Digital Product and Service Marketing . . . 563
Leadership and Human Resource Management Systems . . . 565
German and International Corporate Law . . . 567
Master Seminar . . . 569
Project Management . . . 570
Financial Accounting and Reporting . . . 572
European(AI)Law . . . 574
Bachelor Seminar . . . 575
2.10 Optional Subjects AIS-TE: Technology . . . 576
Microelectronic Devices . . . 576
Product Development Methodology I . . . 578
Product Development Methodology II . . . 579
Product Development Methodology III . . . 580
Product Development Methodology IV . . . 581
Technology of Micro- and Precision Engineering . . . 582
Sensor Technique . . . 583
Introduction 3D-Printing and Additive Manufacturing . . . 584

Tutorial in 3D-Printing 585
Lighting Technology I 586
Advanced Lighting Technology 587
Project seminar Spintronic Devices 588

1 Options - Optionals

1.1 Optional Subjects CTS: Communication Technology and Communication Systems

Please note that the following modules are availably only in the Bachelor of Science: 18-jk-1000, 18-kl-1000, 18-pe-1000, 18-zo-1000

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-jk-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Rolf Jakoby		
1	**Teaching content** Read published books or papers on a given subject in Electrical Engineering and Information Technology. Write a summary and present it using multi media technology.				
2	**Learning objectives** The student will be able to understand and analyse scientific papers, to present technical facts properly and well structured. He knows how to summarize and present the given topic.				
3	**Recommended prerequisites for participation**				
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)				
5	**Prerequisite for the award of credit points** Passing the final module examination				
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)				
7	**Usability of the module** BSc ETiT, BSc MEC, BSc iST				
8	**Grade bonus compliant to §25 (2)**				
9	**References**				
Courses					

	Course Nr. 18-jk-1000-ps	**Course name** Proseminar Electrical Engineering and Information Technology		
	Instructor Prof. Dr.-Ing. Rolf Jakoby, Dr.-Ing. Martin Schüßler		**Type** Introductory seminar course	**SWS** 2

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-kl-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Anja Klein		

1	**Teaching content** Read published books or papers on a given subject in Electrical Engineering and Information Technology. Write a summary and present it using multi media technology.
2	**Learning objectives** The student will be able to understand and analyse scientific papers, to present technical facts properly and well structured. He knows how to summarize and present the given topic.
3	**Recommended prerequisites for participation** Basic knowledge from the first four semesters
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc MEC, BSc iST, BSc Wi-ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References**

Courses

Course Nr. 18-kl-1000-ps	**Course name** Proseminar Electrical Engineering and Information Technology		
Instructor Prof. Dr.-Ing. Anja Klein, M.Sc. Sumedh Dongare		**Type** Introductory seminar course	**SWS** 2

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-pe-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1	**Teaching content** Read published books or papers on a given subject in Electrical Engineering and Information Technology. Write a summary and present it using multi media technology.
2	**Learning objectives** The student will be able to understand and analyse scientific papers, to present technical facts properly and well structured. He knows how to summarize and present the given topic.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc MEC, BSc iST
8	**Grade bonus compliant to §25 (2)**

Courses

	Course Nr. 18-zo-1000-ps	**Course name** Proseminar Electrical Engineering and Information Technology		
	Instructor Prof. Dr.-Ing. Abdelhak Zoubir		**Type** Introductory seminar course	**SWS** 2

Module name Communication Technology II					
Module nr. 18-kl-2010	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Anja Klein		

1 Teaching content

linear and nonlinear digital modulation schemes, optimum receivers for AWGN channels, error probability, channel capacity, channel models, channel estimation and data detection for multipath channels, multicarrier schemes, OFDM

2 Learning objectives

After completion of the lecture, students possess:

- the ability of comparing, evaluating, classifying an analyzing linear and nonlinear modulation schemes by means of signal space representations;
- the ability to understand, describe and analyze the influence of AWGN on the signal;
- the ability to understand and derive optimum receivers in case of AWGN channels;
- the ability to understand, describe and analyze the influence of multipath propagation on the signal;
- the ability to describe the influence of a multipath channel mathematically (channel model) and estimate the multipath channel at the receiver;
- the knowledge of equalizing the received signal in order to undo the influence of multipath propagation, as well as the ability to derive and design several equalizer structures;
- the ability to analyze and evaluate the properties and application areas of multicarrier transmission systems, e.g. OFDM-systems;
- the ability to design and evaluate the system parameters of multicarrier schemes for the application in realistic mobile radio scenarios;

3 Recommended prerequisites for participation

Electrical Engineering I and II, Deterministische Signale und Systeme, Stochastische Signale und Systeme, Communication Technology I, Basics of Telecommunication, Mathematics I to IV

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

MSc ETIT, MSc Wi-ETiT, MSc CE, MSc iCE, MSc iST, MSc MEC

8 Grade bonus compliant to §25 (2)

9 References

will be announced in the lecture

Courses

	Course Nr. 18-kl-2010-vl	**Course name** Communication Technology II		
	Instructor Prof. Dr.-Ing. Anja Klein		**Type** Lecture	**SWS** 2
	Course Nr. 18-kl-2010-ue	**Course name** Communication Technology II		
	Instructor Prof. Dr.-Ing. Anja Klein		**Type** Practice	**SWS** 1

Module name Digital Signal Processing					
Module nr. 18-zo-2060	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1	**Teaching content** 1) Discrete-Time Signals and Linear Systems - Sampling and Reconstruction of Analog Signals 2) Digital Filter Design - Filter Design Principles; Linear Phase Filters; Finite Impulse Response Filters; Infinite Impulse Response Filters; Implementations 3) Digital Spectral Analysis - Random Signals; Nonparametric Methods for Spectrum Estimation; Parametric Spectrum Estimation; Applications; 4) Kalman Filter
2	**Learning objectives** Students will understand basic concepts of signal processing and analysis in time and frequency of deterministic and stochastic signals. They will have first experience with the standard software tool MATLAB.
3	**Recommended prerequisites for participation** Deterministic signals and systems theory
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 180 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, Wi-ETiT, MSc Medizintechnik
8	**Grade bonus compliant to §25 (2)**
9	**References** Course manuscript Additional References: • A. Oppenheim, W. Schafer: Discrete-time Signal Processing, 2nd ed. • J.F. Böhme: Stochastische Signale, Teubner Studienbücher, 1998

Courses

	Course Nr. 18-zo-2060-vl	**Course name** Digital Signal Processing		
	Instructor M.Sc. Martin Gölz, Prof. Dr.-Ing. Abdelhak Zoubir		**Type** Lecture	**SWS** 3

	Instructor M.Sc. Martin Gölz, Prof. Dr.-Ing. Abdelhak Zoubir		**Type** Practice	**SWS** 1

Module name Information Theory II					
Module nr. 18-pe-2010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1	**Teaching content** This lecture course is devoted to advances of network information theory. Outline: overview of Shannon capacity, outage and ergodic capacity, capacity of channels with state, capacity of Gaussian vector channels, capacity regions of multi-user channels, capacity regions of multiple-access and broadcast fading channels, interference channel, relay channel, multiuser bounds, multi-user diversity., wiretap channel, secrecy rate and physical layer security.
2	**Learning objectives** Students will understand advanced concepts and strategies in networkinformation theory.
3	**Recommended prerequisites for participation** Knowledge of basic communication theory
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, BSc iST, MSc Wi-ETiT, MSc iCE, BSc/MSc CE
8	**Grade bonus compliant to §25 (2)**
9	**References** 1. Abbas El Gamal and Young-Han Kim, Network Information Theory, Cambrige, 2011. 2.. T.M. Cover and J.A. Thomas, Elements of Information Theory, Wiley Sons, 1991. 3.. D. Tse and P. Vishwanath, Fundamentals of Wireless Communications, Cambridge University Press, 2005.

	Instructor Prof. Dr.-Ing. Marius Pesavento		**Type** Lecture	**SWS** 3
	Course Nr. 18-pe-2010-ue	**Course name** Information Theory II		
	Instructor Prof. Dr.-Ing. Marius Pesavento		**Type** Practice	**SWS** 1

Module name Mobile Communications					
Module nr. 18-kl-2020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Anja Klein		

1	**Teaching content** The lecture covers aspects of mobile communication systems with particular focus on the physical layer. Mobile radio systems, services, market, standardization duplex and multiple access techniques, cellular concept mobile radio channel, deterministic and stochastic description modulation schemes code division multiple access (CDMA) orthogonal frequency division multiplexing (OFDM) optimum and suboptimum receiver techniques cellular radio capacity and spectrum efficiency diversity methods multiple input multiple output (MIMO) systems power control and handover architecture of mobile radio systems
2	**Learning objectives** After completion of the lecture, students possess • a profound understanding of physical layer aspects ,e.g., transmission schemes, multiple access schemes of mobile communication systems, duplex schemes, multi carrier schemes, receiver techniques, multi antenna schemes • a profound understanding of signal propagation in mobile radio systems (mobile radio channel) • the ability to understand and solve problems of the field of the physical layer • the ability to compare, analyse and evaluate different system concepts • knowledge on modelling of the transmission properties of the mobile radio channel
3	**Recommended prerequisites for participation** Deterministic Signals and Systems, Communication Technology I, Mathematics I to IV
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc ETIT, MSc Wi-ETiT, MSc CE, MSc iCE, MSc iST, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** will be announced in the lecture

Module name Speech and Audio Signal Processing					
Module nr. 18-zo-2070	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1	**Teaching content** Algorithms of speech and audio signal processing: Introduction to the models of speech and audio signals and basic methods of audio signal processing. Procedures of codebook based processing and audio coding. Beamforming for spatial filtering and noise reduction for spectral filtering. Cepstral filtering and fundamental frequency estimation. Mel-filterind cepstral coefficients (MFCCs) as basis for speaker detection and speech recognition. Classification methods based on GMM (Gaussian mixture models) and speech recognition with HMM (Hidden markov models). Introduction to the methods of music signal processing, e.g. Shazam-App or beat detection.
2	**Learning objectives** Based on the module you acquire an advanced knowledge of digital audio signal processing mainly with the help of the analysis of speech signals. You learn about different basic and advanced methods of audio signal processing, to range from the theory to practical applications. You will acquire knowledge about algorithms such as they are applied in mobile telephones, hearing aids, hands-free telephones, and man-machine-interfaces (MMI). The exercise will be organized as a talk given by each student with one self-selected topic of speech and audio processing. This will allow you to acquire the know-how to read and understand scientific literature, familiarize with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.
3	**Recommended prerequisites for participation** Knowlegde about satistical signal processing (lecture „Digital Signal Processing“). Desired - but not mandatory - is knowledge about adaptive filters.
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS) Seminar presentation: Scientific talk about a topic in the field of “Speech and Audio Signal Processing”, single (duration 10-15 min) or in groups of two students (15-20 min) or in a group of 20 students and more a written exam (duration 90 min)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc iCE
8	**Grade bonus compliant to §25 (2)**
9	**References** Slides (for further details see homepage of the lecture)

Module name Digital Signal Processing Lab					
Module nr. 18-zo-2030	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1 Teaching content

1. Introduction to MATLAB
2. Discrete-Time Signals and Systems
3. Frequency-Domain Analysis using the DFT
4. Digital FIR Filter Design
5. IIR Filter Design using Analog Prototypes
6. Nonparametric Spectrum Estimation
7. Parametric Spectrum Estimation.

2 Learning objectives

The students are able to apply skills acquired in the course Digital Signal Processing. These include the design of digital FIR and IIR filters as well as non-parametric and parametric spectrum estimation. Students learn how MATLAB is used to apply theoretical concepts and to demonstrate signal processing techniques by using hands-on application examples.

3 Recommended prerequisites for participation

Fundamentals of Signal Processing

4 Form of examination

Module exam:

- Module exam (Study achievement, Written examination, Duration: 120 Min., Default RS)

Exam (Duration: 120 min) and a Report (Lab Reports), Details will be announced at the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Written examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc iCE

8 Grade bonus compliant to §25 (2)

Courses

Course Nr.	**Course name**		
18-zo-2030-pr	Digital Signal Processing Lab		
Instructor Prof. Dr.-Ing. Abdelhak Zoubir		**Type** Internship	**SWS** 3

Module name Multimedia Communications Lab II					
Module nr. 18-sm-2070	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

The course deals with cutting edge development topics in the area of multimedia communication systems. Besides a general overview it provides a deep insight into a special development topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and basic scientific competences in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia / e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Applications for distributed workflows

2 Learning objectives

The ability to solve and evaluate problems in the area of design and development of future multimedia communication networks and applications shall be acquired. Acquired competences are:

- Design of complex communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Acquisition of project management techniques for small development teams
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation

Keen interest to explore challenging topics which are cutting edge in technology and research. Further we expect:

- Solid experience in programming Java and/or C# (C/C++)
- Solid knowledge in object oriented analysis and design
- Solid knowledge in computer communication networks are recommended
- Lectures in Communication Networks I (II, III, or IV) are an additional plus

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc iCE, BSc/MSc iST, Wi-ETiT, BSc/MSc CS, Wi-CS,
8	**Grade bonus compliant to §25 (2)**
9	**References** Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books: • Andrew Tanenbaum: "Computer Networks". Courses

Course Nr. 18-kl-2040-pj	**Course name** Project Seminar Wireless Communications		
Instructor Prof. Dr.-Ing. Anja Klein, M.Sc. Sumedh Dongare		**Type** Project seminar	**SWS** 4

Module name Multimedia Communications Seminar II					
Module nr. 18-sm-2090	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

This seminar deals with current and upcoming trends relevant to the future development of multimedia communication systems. The educational objective of this seminar is to gain knowledge about future research trends in different areas. To this aim, an extensive literature research will be performed, as well as the writing-up of a report and the presentation of selected, high-quality research topics from current leading magazines, newspapers and conferences in the web technologies research area.

Some potential topics are:

- Knowledge & Educational Technologies
- Self organizing Systems & Overlay Communication
- Mobile Systems & Sensor Networking
- Service-oriented Computing
- Multimedia Technologies & Serious Games

2 Learning objectives

Students shall acquire profound knowledge from current scientific publications, standards and literature on multimedia communication systems and applications which will build the future Internet. In so doing, the students will develop the following competencies:

- Search for and review relevant scientific literature.
- Analyse and evaluate complex technical and scientific information.
- Write technical and scientific abstracts and summary reports.
- Present technical and scientific information.

3 Recommended prerequisites for participation

Solid knowledge in computer communication networks. Lectures in Communication Networks I and II are recommended.

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

Courses

	Course Nr.	Course name		
	18-sm-2090-se	Multimedia Communications Seminar II		
	Instructor		**Type**	**SWS**
	Prof. Dr. rer. nat. Björn Scheuermann, M.Sc. Tim Steuer, Prof. Dr.-Ing. Ralf Steinmetz, M.Sc. Julian Zobel		Seminar	2

Module name Adaptive Filters					
Module nr. 18-zo-2010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German/English			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1 Teaching content

Theory:

1) Derivation of optimal filters for stochastic processes, e.g. Wiener filter or linear prediction filter based on suitable cost functions.
2) Elaboration of adaptive procedures, which allow to iteratively approach the optimal solution for non-stationary signals in non-stationary environments. Here, the adaptive procedures such as NLMS adaptation, affine projection, and the RLS algorithm are derived and extensively analysed.
3) Analysis of the adaptation behaviour and control procedures of adaptive filters based on the NLMS procedure.
4) Derivation and analysis of the Kalman filter as optimal filter for non-stationary input signals.
5) Procedures for the decomposition of signals into sub-bands for the realization of optimal filters in the frequency domain, e.g. noise reduction procedures.

Applications:

Parallel to the theory, practical applications are explained. As an example for the Weiner filter, the acoustic noise reduction procedures are explained. Acoustic echo cancellation and feedback cancellation are given as examples for adaptive filters. Furthermore beamforming approaches are introduced.

It is planned to offer an excursion to Siemens Audiology Engineering Group in Erlangen.
In the 4 to 5 exercises, some content of the lecture will be implemented in MATLAB which allows the students to get familiar with practical realizations of the theoretical procedures.

2 Learning objectives

During the lecture, basics of adaptive filters are taught. The necessary algorithms are derived, interpreted and applied to examples of speech, audio and video processing.
Based on the content of the lecture you are able to apply adaptive filters to real practical applications.
For the admission to the exam you give a talk about a topic in the domain of adaptive filters chosen by you. This will allow you to acquire the know-how to read and understand scientific literature, familiarize yourself with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.

1 Teaching content

This course extends the signal processing fundamentals taught in DSP towards advanced topics that are the subject of current research. It is aimed at those with an interest in signal processing and a desire to extend their knowledge of signal processing theory in preparation for future project work (e.g. Diplomarbeit) and their working careers. This course consists of a series of five lectures followed by a supervised research seminar during two months approximately. The final evaluation includes students seminar presentations and a final exam.
The main topics of the Seminar are:

- Estimation Theory
- Detection Theory
- Robust Estimation Theory
- Seminar projects: e.g. Microphone array beamforming, Geolocation and Tracking, Radar Imaging, Ultrasound Imaging, Acoustic source localization, Number of sources detection.

2 Learning objectives

Students obtain advanced knowledge in signal processing based on the fundamentals taught in DSP and ETiT 4. They will study advanced topics in statistical signal processing that are subject to current research. The acquired skills will be useful for their future research projects and professional careers.

3 Recommended prerequisites for participation

DSP, general interest in signal processing is desirable.

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, BSc/MSc iST, MSc iCE, Wi-ETiT

8 Grade bonus compliant to §25 (2)

Courses

	Course Nr. 18-zo-2040-se	**Course name** Advanced Topics in Statistical Signal Processing		
	Instructor Prof. Dr.-Ing. Abdelhak Zoubir		**Type** Seminar	**SWS** 4

Module name Antennas and Adaptive Beamforming					
Module nr. 18-jk-2020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Rolf Jakoby		

1	**Teaching content** Overview of most important antenna parameters types as well as their applications. Fundamental theories: Fourier transform for far-field pattern calculations, antenna modeling techniques, antenna synthesis methods, image theory, determination of field regions of line sources, of the average radiated power density and power, directivity and gain. Antennas as key elements in power budgets of radio links, introducing the effective aperture of an antenna, deriving the relation between gain and effective aperture. Array antennas are a key hardware for beamforming and smart antenna systems: fundamentals of phased-scanning arrays, non-uniformly excited, equally spaced linear arrays, multi-dimensional planar arrays and mutual coupling effects. Wire antennas: still the most prevalent of all antenna forms, relatively simple in concept, easy to construct, very inexpensive. Antenna radiation fields and antenna parameters for different types of antennas are derived from Maxwell´s equations, applied for aperture antennas (horns, lenses or reflector antennas) and printed antennas (microstrip-patch and coplanar-slot antennas) Some basic numerical calculation methods: integral equation methods in the time and frequency domain, physical optics and uniform theory of diffraction are briefly summarized and compared for antennas and scattering problems. Smart antennas in communication and radar systems, with focus on beam steering and adaptive beamforming.
2	**Learning objectives** Students will know basic antenna parameters: pattern, gain, directivity, half-power beamwidth, side- lobe-level, efficiency and input impedance to compare, assess and evaluate different antennas for various applications and operating frequencies. The antenna field regions, reactive near-field, near-field and far-field, can be differentiated and the far-field pattern of an antenna can be determined from given current distributions along the antenna by using Fourier transformation or integral solutions with distributed ideal dipoles as basic elements (antenna analysis). To assess in general physical requirements, constrains and limitations of antennas, students can use fundamental antenna theory: impedance matching techniques, antenna modeling and far-field pattern analysis, antenna synthesis, image theory and fundamental limits of electrically small antennas. After being incorporated into the different adaptive beamforming techniques, the array theory enables the student to design antenna systems that are assembled of a certain number of separate elements, feeding network, beamforming network etc. for phased-scanning or smart antennas in communications and sensing. Moreover, students are able to determine, analyze and evaluate the most important classes of antennas in wireless technology for many applications, operating frequencies, desired requirements or practical constrains: (1.) wire- dipole antennas, (2.) planar antennas (microstrip, dipole and slot antennas), (3.) aperture antennas (horn antennas, parabolic reflector antennas, lens antennas, Cassegrain and Gregorian double-reflector configurations), (4.) broadband and frequency-independent antennas (V antennas, biconical antennas, helical antennas, spiral and log-periodic antennas).
3	**Recommended prerequisites for participation** Fundamentals of Communications, Microwave Engineering 1
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading**

	Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)			
7	**Usability of the module** BSc ETiT, MSc ETiT, MSc iCE, Wi-ETiT			
8	**Grade bonus compliant to §25 (2)**			
9	**References** Jakoby, Skriptum Antennas and Adaptive Beamforming, wird am Beginn der Vorlesung verkauft und kann danach im FG-Sekretariat erworben werden

Module nr. 18-zo-1030	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1	**Teaching content** The course covers the following topics: • The basic concepts of stochastic • The sampling theorem • Discrete-time noise processes and their properties • Description of noise processes in the frequency domain • Linear time-invariant systems: FIR and IIR filters • Filtering of noise processes: AR, MA, and ARMA models • The Matched filter • The Wiener filter • Properties of estimators • The method of least squares
2	**Learning objectives** The course covers basic concepts of signal processing, and illustrates them with practical examples. It serves as an introductory course for advanced lectures in digital signal processing, adaptive filtering, communications, and control theory.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS) In general, the examination takes place in form of a written exam (duration: 120 minutes). If up to 10 students register in semesters in which the lecture does not take place, there will will be an oral examination (duration: 30 min.). The type of examination will be announced within one working week after the end of the examination registration phase.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc MEC
8	**Grade bonus compliant to §25 (2)**

Module name
Convex Optimization in Signal Processing and Communications

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-pe-2020	6 CP	180 h	120 h	1 Term	Summer term

Language	Module owner
English	Prof. Dr.-Ing. Marius Pesavento

1 Teaching content

This graduate course introduces the basic theory of convex optimization and illustrates its use with many recent applications in communication systems and signal processing.
Outline: Introduction, convex sets and convex functions, convex problems and classes of convex problems (LP, QP, SOCP, SDP, GP), Lagrange duality and KKT conditions, basics of numerical algorithms and interior point methods, optimization tools, convex inner and outer approximations for non convex problems, sparse optimization, distributed optimization, mixted integer linear and non-linear programming, applications.

2 Learning objectives

Students will learn the basic theory of convex optimization and its applications.

3 Recommended prerequisites for participation

Knowledge in linear algebra and the basic concepts of signal processing and communications.

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 14 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT

8 Grade bonus compliant to §25 (2)

1 Teaching content

The course deals with cutting edge scientific and development topics in the area of multimedia communication systems. Besides a general overview it provides a deep insight into a special scientific topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and scientific competences in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia / e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Resource-based Learning

2 Learning objectives

The ability to solve and evaluate technical and scientific problems in the area of design and development of future multimedia communication networks and applications using state of the art scientific methods shall be acquired. Acquired competences are:

- Searching and reading of project relevant literature
- Design of complex communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Acquisition of project management techniques for small development teams
- Systematic evaluation and analyzing of technical and scientific experiments
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation

Keen interest to develop and explore challenging solutions and applications in cutting edge multimedia communications systems using scientific methods. Further we expect:

- Solid experience in programming Java and/or C# (C/C++).
- Solid knowledge in object oriented analysis and design.
- Basic knowledge of design patterns, refactoring and project management.
- Solid knowledge in computer communication networks is recommended.
- Lectures in “Communication Networks I” and “Communication Networks II” are recommended

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

	Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc Wi-ETiT, BSc/MSc CS, MSc Wi-CS, MSc ETiT, MSc iST
8	**Grade bonus compliant to §25 (2)**
9	**References** Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books: • Andrew Tanenbaum: "Computer Networks". Prentice Hall PTR (ISBN 0130384887) • Raj Jain: "The Art of Computer Systems Performance Analysis: Techniques for Experimental Design, Measurement, Simulation, and Modeling" (ISBN 0-471-50336-3) • Joshua Bloch: "Effective Java - Programming Language Guide" (ISBN-13: 978-0201310054) • Erich Gamma, Richard Helm, Ralph E. Johnson: "Design Patterns: Objects of Reusable Object Oriented Software" (ISBN 0-201-63361-2) • Martin Fowler: "Refactorings - Improving the Design of Existing Code" (ISBN-13: 978-0201485677) • Kent Beck: "Extreme Programming Explained - Embrace Changes" (ISBN-13: 978-0321278654)

Module name Advanced Seminar on Networking, Security, Mobility, and Wireless Communications					
Module nr. 20-00-0549	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. rer. nat. Karsten Weihe		

1 Teaching content

The Advanced Seminar on Networking, Security, Mobility, and Wireless Communications covers current research that is considered highly relevant for the future development of the given topic areas. Goal of the seminar is to explore the aforementioned research area by studying, critically analyzing and discussing, summarizing, and presenting selected first-rate research articles. Deliverables are a short presentation, a final presentation, and a seminar paper.

The prospective topics for the advanced seminar will be derived from the current research topics of the SEEMOO group.

Course contents:
- Indepentent exploration of a topic in the area of networking, security, mobility, and wireless communications (typically in english)
- Own, enhanced literature study
- Interpretation and classification of the literature study
- Preparation of an introductory talk as well as a final talk including presentation slides
- Presentation of both talks for a heterogenous audience (experts/non-experts)
- Technical discussion after the talks
- Feedback to the speakers and the talks (including presentation skills) and technical content
- Understanding the process of scientific work as well as of scientific publications

2 Learning objectives

After successfully attending the course, students are able to independently explore new topics in a scientific manner. They have aquired detailed knowledge on selected mechanisms, methodologies as well as applications for the investigated topic area. Techniques such as thoroughly surveying literature, critical discussion and analysis of scientific articles, and the presentation of the obtained results are demonstrated by the students. Students can defend their work against a critical technical audience.

3 Recommended prerequisites for participation

Successfull participation of an lecture of SEEMOO

4 Form of examination

Course related exam:
- [20-00-0549-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:
- [20-00-0549-se] (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

	B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**
9	**References** Will be announced in seminar.

Courses

Course Nr. 20-00-0549-se	**Course name** Advanced Seminar on Networking, Security, Mobility, and Wireless Communications		
Instructor Prof. Dr.-Ing. Matthias Hollick		**Type** Seminar	**SWS** 3

Module name Wireless Network for Emergency Response: Fundamentals, Design, and Build-up from Scratch					
Module nr. 20-00-0780	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** The communication capabilities among the population is of utmost importance to respond to crises. This course will discuss how to build wireless communication systems from scratch, i.e. under the assumption that no communication infrastructure is left intact as a result of the crisis. The course introduces the theoretical basis from the fields of amateur radio as well as communication systems. It deepens these fields with the knowledge to design and build communication networks for times of crisis. The discussed technologies will span from local to global wireless communications without need of further infrastructure. Theoretical exercises as well as experimentation, the design and building of electrical circuits and the analysis of wireless technology under laboratory conditions deepen the understanding of the subject. Course contents: - Signals, signal propagation, antennas, basics of electrical engineering - Modulation schemes in analog and digital systems (OFDM, ATV/SSTV, Packet Radio, SSB, ...) - System aspects for communication in times of crisis - Design and practical realization from scratch of wireless communication systems
2	**Learning objectives** After successfully attending the course, students have theoretical and practical knowledge in the area of wireless and infrastructureless communication for emergency response. They understand the most important physical and electrotechnical basics of wireless communications and know wireless transmission mechanisms in theory and practice. They are able to build a wireless communication system from scratch and operate it. The students acquire competences in the area of amateur radio and software defined radio technology.
3	**Recommended prerequisites for participation**
4	**Form of examination** Course related exam: • [20-00-0780-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0780-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

	In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.			
9	**References** Selected and given in lecture.			
Courses

Module name Internet - Practical Course Telecooperation					
Module nr. 20-00-0131	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** The Praktikum is divided into three parts. In each of the parts, there will be one lecture for reviewing the basic concepts in that part and for introducing new material. After the lecture, the students will have roughly 4 weeks to implement the assignment given in the lecture. Each of the assignments will be graded separately and all of the grades will be used to determine the total grade for the Praktikum. Relevant topics are: - Introduction to Java network programming and HTTP - Peer-to-peer technologies - Web caching - Internet standards
2	**Learning objectives** Students will have aquired knowledge on currently evolving technologies. Thus, students will have used these building blocks of future-generation Internet services practically and will have gathered experiences with using, developing and integrating those technologies.
3	**Recommended prerequisites for participation** Net Centric Systems
4	**Form of examination** Course related exam: • [20-00-0131-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Language English			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

In this class the technologies that make today's communication networks work are introduced and discussed. This lecture covers basic knowledge about communication networks and discusses in detail the physical layer, the data link layer, the network layer and parts of the transport layer.
The physical layer, which is responsible for an adequate transmission across a channel, is discussed briefly. Next, error control, flow control and medium access mechanisms of the data link layer are presented. Then the network layer is discussed. It comprises mainly routing and congestion control algorithms. After that basic functionalities of the transport layer are discussed. This includes UDP and TCP. The Internet is thoroughly studied throughout the class.
Detailed Topics are:

- ISO-OSI and TCP/IP layer models
- Tasks and properties of the physical layer
- Physical layer coding techniques
- Services and protocols of the data link layer
- Flow control (sliding window)
- Applications: LAN, MAN, High-Speed LAN, WAN
- Services of the network layer
- Routing algorithms
- Broadcast and Multicast routing
- Congestion Control
- Addressing
- Internet protocol (IP)
- Internetworking
- Mobile networking
- Services and protocols of the transport layer
- TCP, UDP

2 Learning objectives

This lecture teaches about basic functionalities, services, protocols, algorithms and standards of network communication systems. Competencies aquired are basic knowledge about the lower four ISO-OSI layers: physical layer, datalink layer, network layer and transport layer; Furthermore, basic knowledge about communication networks is taught. Attendants will learn about the functionality of today's network technologies and the Internet.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** Wi-CS, Wi-ETiT, BSc CS, BSc ETiT, BSc iST
8	**Grade bonus compliant to §25 (2)** A bonus of 0.3 or 0.7 can be obtained. For 0.3 bonus: 7 out of 9 exercises are to be solved to the best of your knowledge. That is, every question needs to be answered. However, not every question needs to be answered correctly. Additionally, at least one wiki article or applet concerning a topic of the lecture has to be provided (written). For the 0.7 bonus: Additionally, present one exercise and write at least three wiki articles, or write at least 5 wiki articles. An oral exam ("Fachgespräch") is mandatory in order to receive the bonus. The bonus can only be applied if the exam grade is 4.0 or better.

1 Teaching content

Mobile communications and wireless networking technology has seen a thriving development in recent years. The integrated course addresses the characteristics/principles of mobile networks in detail, and practical solutions are presented. Hereby our focus is on the network layer, which is often regarded as the glue of communication systems. In addition to describing the state of the art in technology we discuss actual research problems and learn about methodologies to approach such problems systematically. The contents of the course will be deepended by exercises.

Course contents:
- Introduction to mobile and wireless communications: Applications, history, market vision
- Overview of wireless transmission: frequencies & regulations, signals, antennas, signal propagation, multiplexing, modulation, spread spectrum, cellular systems
- Medium access control in the wireless domain: SDMA, FDMA, CDMA TDMA (fixed, Aloha, CSMA, DAMA, PRMA, MACA, collision avoidance, polling)
- Wireless local area networks: IEEE 802.11 standard including physical layer, MAC layer and access schemes, quality of service and power management
- Wireless metropolitan area networks: Wireless mesh networks, IEEE 802.16 standard including modes of operation, medium access control, quality of service and scheduling
- Mobility at network layer: Concepts to support mobility on various layers, Mobile IP
- Ad hoc networks: Terminology, basics and applications, characteristics of ad hoc communication, ad hoc routing paradigms and protocols
- Performance evaluation of mobile networks: Overview of performance evaluation, systematic approach / common mistakes and how to avoid them, experimental design and analysis
- Mobility at transport layer: Variants of TCP (indirect TCP, snoop TCP, mobile TCP, wireless TCP)
- Mobility at application layer. Outlook: Applications for mobile networks and wireless sensor networks

2 Learning objectives

After successfully attending the course, students have an in-deep knowledge on the working of mobile communication networks. They have gained insight into media access control mechanisms dedicated to wireless communication and have a thorough understanding of mechanisms based on the network and the transport layers, with a focus on ad hoc and mesh networks. Moreover, the students have acquired knowledge about the connections between the different protocol layers and are able to apply the acquired knowledge on methodological analysis of real communication systems. The students are therefore be conversant with the characteristics and basic principles of wireless and mobile communications in theory and practice. The exercise-parts of the integrated course deepen the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.

3 Recommended prerequisites for participation

Basic courses in Communication Networks are recommended.

4 Form of examination

Course related exam:
- [20-00-0748-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

Courses

Course Nr.	**Course name**		
20-00-0748-iv	Mobile Networking		
Instructor		**Type**	**SWS**
Prof. Dr.-Ing. Thorsten Strufe		Integrated course	4

Module name Multimedia Communications Lab I					
Module nr. 18-sm-1020	**Credit points** 3 CP	**Workload** 90 h	**Self study** 45 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

The course deals with cutting edge development topics in the area of multimedia communication systems. Beside a general overview it provides a deep insight into a special development topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and basic scientific competences in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia/e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Applications for distributed workflows
- Resource-based Learning

2 Learning objectives

The ability to solve simple problems in the area of multimedia communication shall be acquired. Acquired competences are:

- Design of simple communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation

Keen interest to explore basic topics of cutting edge communication and multimedia technologies. Further we expect:

- Basic experience in programming Java/C# (C/C++).
- Knowledge in computer communication networks. Lectures in Communication Networks I and/or Net Centric Systems are recommended.

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

	BSc ETiT, BSc/MSc iST, MSc MEC, Wi-CS, Wi-ETiT, BSc/MSc CS
8	**Grade bonus compliant to §25 (2)**
9	**References** Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books: • Andrew Tanenbaum: "Computer Networks". Prentice Hall PTR (ISBN 0130384887) • Christian Ullenboom: "Java ist auch eine Insel: Programmieren mit der Java Standard Edition Version 5 / 6" (ISBN-13: 978-3898428385) • Kent Beck: "Extreme Programming Explained - Embrace Changes" (ISBN-13: 978-0321278654)

Language German/English			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

The seminar investigates current and upcoming topics in multimedia communication systems, which are expected to be of utmost importance for the future evolution of the Internet and information technolgy in goal. The goal is to learn more about multimedia communication systems by studying, summarizing, and presenting top quality papers from recent high quality networking research journals, magazines, or conferences. The selection of topics corresponds to the research area of participating researchers.

Possible topics are:

- Knowledge & Educational Technologies
- Self organizing Systems & Overlay Communication
- Mobile Systems & Sensor Networking
- Service-oriented Computing
- Multimedia Technologies & Serious Games

2 Learning objectives

The students are actively studying cutting edge scientific articles, standards, and books about multimedia communication systems and applications, which are expected to be of utmost important for the future of the Internet.
Students acquire competences in the following areas:

- Searching and reviewing of relevant scientific literature
- Analysis and evaluation of complex technical and scientific information
- Writing of technical and scientific summaries and short papers
- Presentation of complex technical and scientific information

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Instructor Prof. Dr. Boris Koldehofe, Prof. Dr. rer. nat. Björn Scheuermann, M.Sc. Ralf Kundel, M.Ed. Benjamin Becker		**Type** Practice	**SWS** 2

Module name Seminar Telecooperation					
Module nr. 20-00-0130	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** The TK Seminar is cycle of seminar where students are given the chance to read and analyze current scientific publications.
2	**Learning objectives** After participation in the seminar Telekooperation, students - have been introduced to the research area of their seminar topic - are able to critically read and analyze scientific papers - can document and present the evaluation of such critical analysis in both written and spoken form
3	**Recommended prerequisites for participation** General knowledge within Computer Science based on Bachelor.
4	**Form of examination** Course related exam: • [20-00-0130-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0130-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

Module name TK1: Distributed Systems and Algorithms					
Module nr. 20-00-0065	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** Objectives: - Comprehensive overview about the fundamental problems and approaches in distributed computing - In-depth methodical knowledge about classical distributed algorithms and programming paradigms - Applied knowledge of current developments and standards Course Content: - Introduction - Recap of and addition to the first chapter of the Net Centric Computing lecture - Distributed algorithms - Distributed programming
2	**Learning objectives** After successfully attending the course, students are familiar with the concepts of distributed algorithms and programming. They understand the fundamental issues of distributed systems and the classical distributed algorithms and programming paradigms. They are able to apply these classical and current standards of distributed programming to given problems.
3	**Recommended prerequisites for participation** Computer Networks and Distributed Systems
4	**Form of examination** Course related exam: • [20-00-0065-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0065-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Module name Ubiquitous computing in business processes					
Module nr. 20-00-0121	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** - Learning how state-of-the-art ubiquitous computing technologies can be utilized in enterprise business processes and in the context of smart city services - Identifying technologies' economic potential for business processes and in the context of smart cities - Understanding underlying technologies, their benefits, challenges, and corresponding business cases - Technologies considered will be RFID technology and its integration with business processes, other smart items (e.g., smart shelfs), etc. - Demonstration of how integration works between the real world and the virtual world as it is represented in enterprise software systems today - Hands-on experience and live demonstrations
2	**Learning objectives** After participation in this course, students will have aquired knowledge about implications of ubiquitous computing on business to business processes and in the context of smart city services in conjunction with basic concepts.
3	**Recommended prerequisites for participation**
4	**Form of examination** Course related exam: • [20-00-0121-vl] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Radar Techniques					
Module nr. 18-jk-2040	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Rolf Jakoby		

1	**Teaching content** First, there will be an introduction of different radar techniques, describing their concepts and principles, their applications and the operating frequency ranges. In a historical survey, the radar ranges and propagation effects will be dealt with. In the second part, various primary and secondary radar techniques will be investigated in detail, including specific techniques of radar signal processing and -analysis.
2	**Learning objectives** Students will know about concepts and principles to detect objects as well as to determine the angular position and range of objects. They learn about the functional principles of various radar systems, including signal processing. They will understand the major physical propagation effects.
3	**Recommended prerequisites for participation** Fundamentals of Communications, Microwave Engineering I
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)

Module name Computer Networks and Distributed Systems					
Module nr. 20-00-0016	**Credit points** 5 CP	**Workload** 150 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. phil. nat. Marc Fischlin		

1	**Teaching content** Overview of Net-Centric Computing (NCC), a basic element of modern computer science. Fundamental network concepts of modeling, planning and evaluating net-centric systems - Foundations: Service, protococols, connection, layer model - protocol mechanisms for media access, routing, broad-/multicast - Multimedia Data Handling - Aspects of continuous data streams and their processing - Quality of service: definition and mechanisms - Multimedia - Synchronisation: Basics - Compression procedures;
2	**Learning objectives** - Overview knowledge of relevant areas and basic problems of net-centric computing (NCC) - Reproducible comprehension of selected, elementary algorithms, protocols and procedures used in the internet - Applicable methodological knowledge of widely applied elements of the modeling and engineering of NCC-systems NCC is, in this context, understood as "internet technology in the broadcast sense". It covers, in particular, themes of the "classical areas" constituted by computer networks, distributed systems, multimedia and mobile communication/ mobile computing, as those from "modern areas", such as ubiquitous/pervasive computing, peer-to-peer-computing or ambient intelligence. The canonical lecture "Introduction to NCS" focusses on the area of computer networks, the understanding of which is fundamental for all other listed areas; the latter will be the subject matter of advanced lectures in the area of NCS.
3	**Recommended prerequisites for participation** Recommended: Funktionale und objektorientierte Programmierkonzepte“, „Algorithmen und Datenstrukturen“, „Betriebssysteme“, „Einführung in den Compilerbau“, „Rechnerorganisation“ und „Systemnahe and parallele Programmierung“.
4	**Form of examination** Course related exam: • [20-00-0016-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Language German/English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** The course presents fundamental concepts, models, and theories in the area of Human Computer Interaction (HCI). More specifically, it contains the following topics: - Theoretical foundation on psychology and interaction design as basis for the design of intuitive user interfaces - Overview of the different types of user interfaces - Command line interfaces - Graphical user interfaces (MacOS, Windows, ...) - Interactive surfaces (Tabletops, Multitouch, ...) - Mobile user interfaces (iOS, Android, ...) - Pen-based user interfaces (electronic pens) - Tangible user interfaces, organic user interfaces - Speech-based user interfaces - Evaluation, measurement and assessment of user interfaces - User studies - Quantitative evaluation - Qualitative evaluation - User-centric software development
2	**Learning objectives** After perticipation in this course, students will have - an understanding of the psychologic foundations of the design of user interfaces - know methods of the user-centric design process - aquired an overview on common UI concepts - learnt to know and how to use techniques for the evaluation of user interfaces
3	**Recommended prerequisites for participation**
4	**Form of examination** Course related exam: • [20-00-0535-iv] (Technical examination, Oral/written examination, Default RS)

Module name Sensor Array Processing and Adaptive Beamforming					
Module nr. 18-pe-2060	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1 Teaching content

This lecture course introduces the principles of modern sensor array processing and adaptive beamforming.

Outline: Motivation and background; applications, narrowband and wideband signal model

Direction-of-arrival estimation (DoA):
traditional methods based on beamforming, super resolution methods, Maximum-Likelihood methods, Subspace based methods, MUSIC, ESPRIT, MODE, root-MUSIC, multidimensional source localization, beamspace processing, array interpolation, partly calibrated arrays, wideband DOA estimation, spatial smoothing, forward-backward averaging, redundancy averaging, correlated sources, minimum redundancy arrays, compressed sensing and sparse reconstruction based DoA estimation, performance bounds

Adaptive beamforming:
Point-source model, covariance model, Wiener-Hopf equation, Minimum Variance Distortionless Response (MVDR) beamformer, Capon Beamformer, sample matrix inversion, signal self-nulling effect, robust adaptive beamforming, Hung-Turner projection beamformer, Generalized Sidelobe canceller beamformer, Eigenspace-based beamformer, non-stationary environments, modern convex optimization based beamforming, worst-case based beamforming, multiuser beamforming.

2 Learning objectives

Students will standard and modern sensor array processing techniques for source localization and transmit/receive beamforming

3 Recommended prerequisites for participation

Knowledge in linear algebra.

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

BSc / MSc etit, BSc / MSc WI-etit, MSc MEC, MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

Module name Machine Learning in Information and Communication Technology (ICT)					
Module nr. 18-kp-2110	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr. techn. Heinz Köppl		

1 Teaching content

The module provides an introduction to the emerging field of machine learning from an engineering perspective. Important models and learning methods are presented and exemplified through problems from information and communication technology.

- Fundamentals of probability theory and multivariate statistics
- Taxonomy of machine learning problems and models (supervised, unsupervised, generative, discriminative)
- Regression and classification: theory, methods and ICT applications
- Dimensionality reduction, clustering and big data analytics: methods and application in communications and signal processing
- Probabilistic graphical models: categories, inference and parameter estimation
- Fundamentals of Bayesian inference, Monte Carlo methods, Bayesian non-parametrics
- Fundamentals of convex optimization: Solution methods and application in communications
- Approximate algorithms for scalable Bayesian inference; application in signal processing and information theory (e.g. decoding of LDPC codes)
- Hidden Markov models (HMM): Theory, Algorithms and ICT applications (e.g. Viterbi decoding of convolutional codes)
- High-dimensional statistics ("large p small n" setting), learning dependency structure in high-dimensional data, learning causality relations from observational data.
- Sparse estimation, random projections, compressive sensing: Theory and applications in signal processing
- Deep neural networks (deep learning): Models, learning algorithms, libraries and ICT applications

2 Learning objectives

Students are able to interpret and categorize specific engineering problems from the ICT domain in terms of machine learning problems.

They are able to reduce such problems to standard machine learning problems and are able to determine suitable solution methods for them.

They are able to implement all necessary algorithms from scratch, but they are also familiar with the state-of-the-art libraries in machine learning.

They are able to determine the involved computational complexity of a method and choose an appropriate solution algorithms based on application constraints.

They are able to apply the acquired methods to other domains, such as data analysis in biomedical engineering, analysis of social network data, etc.

3 Recommended prerequisites for participation

Good command of Matlab (for instance knowledge from course 18-st-2030 Matlab Grundkurs) and engineering mathematics

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

	Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** MSc etit, BSc/MSc iST, MSc iCE, MSc CE
8	**Grade bonus compliant to §25 (2)**

Module name Robust Data Science With Biomedical Applications					
Module nr. 18-mu-2010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Dr.-Ing. Michael Muma		

1 Teaching content

Robust Data Science for Signal Processing

- Basics on robust statistical learning
- Robust regression models
- Robust clustering and classification
- Robust time-series and spectral analysis
- High-dimensional robust data science

Biomedical Applications

- Body-worn and radar-based sensing of vital signs
- Electrocardiogram (ECG) and Photoplethysmogram (PPG)
- Biomarker selection
- Eye research
- Genomics
- Intracranial Pressure (ICP)

The lecture covers fundamental topics and recent developments in robust data science. Unlike classical statistical learning and signal processing, which relies strongly on the normal (Gaussian) distribution, robust methods can tolerate impulsive noise, outliers and artifacts that are frequently encountered in biomedical applications. Robust data science and biomedical application lectures alternate. Exercises revise the theory and apply robust machine learning and signal processing algorithms to real world data. Software toolboxes in Python, Matlab and R that implement the lecture contents are available to the students.

2 Learning objectives

Students understand the basics of robust signal processing and data science and are able to apply them to a variety of problems. They are familiar with various biomedical applications and know the causes of artifacts, outliers and impulsive noise. They can apply algorithms for robust regression, cluster analysis, classification and spectral analysis.

3 Recommended prerequisites for participation

Fundamental knowledge of statistical signal processing

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 180 Min., Default RS)

5 Prerequisite for the award of credit points

Pass module final exam

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

MSc etit, MSc Wi-etit, MSc iCE, MSc iST

8 Grade bonus compliant to §25 (2)

1 Teaching content

A series of 3 lectures provides the necessary background on robust signal processing and machine learning:

1. Background on robust signal processing
2. Robust regression and robust filters for artifact cancellation
3. Robust location and covariance estimation and classification

They are followed by two lectures on selected biomedical applications, such as:

- Body-worn sensing of physiological parameters
- Optical heart rate sensing (PPG)
- Signal processing for the electrocardiogram (ECG)
- Biomedical image processing

Students then work in groups to apply robust signal processing algorithms to real-world biomedical data. Depending on the application, the data is either recorded by the students, or provided to them. The group results are presented during a 20-minute presentation. The final assessment is based on the presentation and an oral examination.

Module name TK3: Ubiquitous / Mobile Computing					
Module nr. 20-00-0120	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1 Teaching content

Objectives:

- Knowledge of technical basics of the mobile communication
- Knowledge of important challenges of the Ubiquitous Computing
- Methodic knowledge about current approaches to these challenges

Course Content:

- Introduction to Ubiquitous Computing
- Mobile Communication
- Internet of Things: RFID and Smart Items
- Service Discovery & Cloudlets
- Context- and Location-aware Computing
- Human Computer Interaction
- Privacy and Trust in Ubiquitous Computing

2 Learning objectives

After successfully attending the course, students are familiar with the technical basis of mobile communication. They understand the fundamental challenge of ubiquitous computing. They know current approaches to solve these challenges. They are able to apply their knowledge to build ubiquitous computing systems.

3 Recommended prerequisites for participation

Computer Netzwerke and Distributed Systems

4 Form of examination

Course related exam:

- [20-00-0120-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:

- [20-00-0120-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

B.Sc. Informatik
M.Sc. Informatik
M.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik
M.Sc. Sportwissenschaft und Informatik

May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

	In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

	20-00-0120-iv	TK3: Ubiquitous / Mobile Computing		
	Instructor		**Type** Integrated course	**SWS** 4

Module name Optical Communications - Components					
Module nr. 18-pr-1050	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr. rer. nat. Sascha Preu		

1 Teaching content

The lecture discusses the working principle of the most important devices and components of modern telecommunication networks and optical data transmission systems. The starting point will be basic physical principles:

The nature of light
- Wave equation
- Polarization
- Absorption, transmission, reflection, refraction
- Mirrors, HR-/AR coatings

Waveguides
- Fiber-optic waveguides
- Attenuation, modes, dispersion
- Fiber types
- Connectors and splices
- Dispersion and dispersion compensation
- Kerr nonlinearity and self-phase modulation

Components, e.g.:
- Optical filters
- Wavelength division multiplexers
- Magneto-optical effect / optical isolator / circulator
- Electro-optic modulator

Lasers
- Basics, concepts, types
- Erbium-doped fiber lasers / amplifiers (EDFL / EDFA)
- Optical semiconductor laser / amplifier (laser diode)

Other selected components and devices

2 Learning objectives

Students understand concepts, basics of physics, design criteria and system requirements (component specifications) of the most important passive and active components of optical communications.

3 Recommended prerequisites for participation

etit 1 + 2, Physics

4 Form of examination

Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

BSc ETiT, MSc ETiT, MSc iCE

8 Grade bonus compliant to §25 (2)

Module name International Summer School 'Microwaves and Lightwaves'					
Module nr. 18-pr-2020	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr. rer. nat. Sascha Preu		

1	**Teaching content** This summer school covers the fundamentals and the latest developments of microwave electronics, THz technology, and optical communication systems with particular focus on the physical concepts involved.
2	**Learning objectives** Students understand the presented research topics, e.g. • topics of microwave engineering, THz engineering, and optical communications • of related electronics • the influence of the relevant properties of materials and of waveguides on signal processing. They gain inside into the latest developments in these fields.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, MSc ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References** A script (English) will be distributed or slides can be downloaded.

Courses

	Course Nr. 18-pr-2020-se	**Course name** International Summer School "Microwaves and Lightwaves"		
	Instructor Prof. Dr.-Ing. Rolf Jakoby, Prof. Dr. rer. nat. Sascha Preu		**Type** Seminar	**SWS** 2

Module name IoT and wireless protocols in embedded systems					
Module nr. 20-00-1064	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** As part of the internship, students become acquainted with IoT and radio protocols and independently carry out a project with embedded hardware. In addition, aspects of IT security are also taken into account. The main focus is on Bluetooth LE, Bluetooth Mesh, LoRaWAN and communication via OOB channels. Depending on the selected project topic, hardware (microcontrollers, FPGAs, RF transceivers, software defined radio, etc.) as well as laboratory environment (logic analyzers, RF analyzers, oscilloscopes, etc.) are provided.
2	**Learning objectives** At the end of the course, students will be able to deal with complex specifications of radio protocols and transfer them into practice. Furthermore, the practical handling of embedded systems and laboratory equipment is taught.
3	**Recommended prerequisites for participation** Previous knowledge in computer networks (compulsory lecture "Computer Networks and Distributed Systems) and Embedded Systems (compulsory lectures Computer Organization and / or Data Engineering) Knowledge of the programming language C and basic knowledge of electrical engineering are helpful, as well as knowledge from relevant lectures in the field" Networks and Systems " Distributed systems "such as TK3, mobile networks or KN1.
4	**Form of examination** Course related exam: • [20-00-1064-pr] (Study achievement, Oral/written examination, Default RS) Pass exam (100%)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Course related exam: • [20-00-1064-pr] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

Instructor Prof. Dr. rer. nat. Eberhard Mühlhäuser	**Type** Internship	**SWS** 4

Module name Data Science I					
Module nr. 18-zo-2110	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1 Teaching content

The course covers the following topics:

- Python programming basics
- Data science introduction
- Data storage and formats
- Data exploration and visualization
- Statistical methods and inference
  - Descriptive statistics (uni & bivariate)
  - Inferential statistics
- Feature extraction
  - Time Series Data
  - Image data
  - Audio data
- Statistical learning
  - Cross-validation, overfitting, annotation
  - Regression
  - Classification

2 Learning objectives

This module offers an introduction to the topic of Data Science with a strong practical orientation. Students gain knowledge about all parts of a Data Science processing: From storage/data acquisition over inferential statistics to visualization.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 16 students register, the examination will be an oral examination (duration: 45 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Yes

Courses

Course Nr. 18-kp-1041-pj	**Course name** Project Seminar Communication and Sensor Systems		
Instructor Prof. Dr. techn. Heinz Köppl		**Type** Project seminar	**SWS** 4

Module name Graph signal processing, learning and optimization					
Module nr. 18-pe-2080	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1 Teaching content

The course covers the following topics:

- Motivation, Applications
- Fundamentals
  - definition of graphs, classes of graphs, properties of graphs, signals defined over graphs
  - Adjecency matrix, Graph Laplacian, Graph shift operator
  - Covariance matrix, conditional dependence, precision matrix
- Graph signal processing
  - Consensus, Diffusion
  - Graph spectral analysis, Graph Fourier Transform
  - Total variational norm, Graph Frequencies
  - Bandlimited graph signals, smoothness
  - Graph filters, Graph sampling theorem
  - Applications
- Network topology inference
  - Link prediction
  - Association network inference
  - Tomographic network topology inference
  - Pearson product-moment correlation
  - Causality, Partial correlation
  - Conditional independence graph
  - Gaussian Markov Random Fields
  - Graphical LASSO, Graphical LASSO with Laplacian constraint
  - Applications
- Graph analysis
  - Subgraph identification
  - Cliques identification
- Optimization over graphs
  - Average consensus, diffusion, exact diffusion
  - Gradient tracking, push-sum algorithm, etc.
  - Applications
- Graph neuronal (convolutional) network

2 Learning objectives

Graph signal processing (i.e., the processing of signals defined over graphs) and network analysis form an interdisciplinary research field with numerous and diverse applications. Upon completion of the module, students will have gained systematic knowledge in graph signal processing theory, graph network analysis, graph topology learning, optimization in graph networks, and learning using graph neural networks. They have learned essential concepts, algorithms and application areas of graph signal processing.

3 Recommended prerequisites for participation

Basic knowledge in linear algebra and matrix analysis.

4 Form of examination

	Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS) In general, the examination takes place in form of a written exam (duration: 120 minutes). If up to 20 students register in semesters in which the lecture does not take place, there will will be an oral examination (duration: 20 min.). The type of examination will be announced within one working weeks after the end of the examination registration phase.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc (WI-) etit, BSc/MSc iST, MSc iCE
8	**Grade bonus compliant to §25 (2)**
9	**References** • Lecture notes and slides can be downloaded here: – www.nts.tu-darmstadt.de – moodle • Further reading: – Petar M. Djuric, Cédric Richard, Cooperative and Graph Signal Processing, Academic Press, 2018, ISBN 9780128136775.

Courses

Course Nr. 18-pe-2080-vl	**Course name** Graph signal processing, learning and optimization		
Instructor Prof. Dr.-Ing. Marius Pesavento		**Type** Lecture	**SWS** 3
Course Nr. 18-pe-2080-ue	**Course name** Graph signal processing, learning and optimization		
Instructor Prof. Dr.-Ing. Marius Pesavento		**Type** Practice	**SWS** 1

Module name Control of Distributed Cyber-Physical Systems					
Module nr. 18-fi-2020	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German/English			**Module owner** Prof. Dr.-Ing. Rolf Findeisen		

1 Teaching content

Cyber-physical systems: Aspects and fundamentals of interconnected, and cyber-physical systems, basic control concepts (stabilizability, controllability, observability, detectability, reachability, resilience, control & estimation of multivariable systems...), systems and graphs, networked control systems (control & estimation over communication networks, control subject to delays/to information loss, security, safety, and privacy), control of interconnected/multi-agent systems (centralized, decentralized & distributed control, consensus, synchronization), hierarchical control (fundamentals, optimization, time scale separation, hierarchical control concepts, optimization based control & real-time optimization)

2 Learning objectives

The students are familiar with the basic analysis and control methods for networked control systems, and interconnected systems, and their applications. They are able to model and analyse interconnected systems, and networked control systems subject to delays, communication loss. Furthermore, they are able to design basic centralized, decentralized, distributed, hierarchical controllers and estimators, as well as controllers to achieve consensus and synchronization control. They are familiar with the concept of time-scale seperation for control and estimation.

3 Recommended prerequisites for participation

Basic concepts of control theory. Fundamentals of linear algebra, differential and difference equations.

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc etit, MSc iCE, BSc/MSc iST, MSc MEC, MSc WI-etit

8 Grade bonus compliant to §25 (2)

Module name Optimization in Multi-Agent Systems					
Module nr. 18-ad-2130	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

Part I: Classical theory of unconstrained and constrained optimization:

- useful facts from analysis (differentiable functions, gradients, Hessian matrices, convex functions)
- necessary and sufficient conditions of extremum
- unconstrained optimization problem: existence, uniqueness, and stability of solution, gradient descent in convex optimization, its convergence and convergence rate
- Karush-Kuhn-Tucker condition
- optimization subjected to convex simple constraints, gradient projection method and its convergence properties
- optimization subjected to inequality constraints, primal-dual approach, Lagrangian, Arrow-Hurwicz-Uzawa iterative procedure

Part II: Optimization in multi-agent systems: Distributed (cooperative) optimization

- consensus in multi-agent systems, motivating examples
- communication protocols: gossip, weight-balanced communication
- consensus algorithm and its convergence (with the proof for weight-balanced communication)
- distributed optimization problems in multi-agent systems, motivating examples
- gradient-based procedure with weight-balanced communication and its convergence
- constrained distributed optimization (motivating examples, projected gradient-based procedure with weight-balanced communication and its convergence, discussion on the primal-dual approach)
- state of the art (convergence rate discussion, unbalanced communication, modern applications and their challenges)

Part III: Optimization in multi-agent systems: Game-theoretic (non-cooperative) optimization

- general game formulation, examples
- Nash equilibrium concept
- discrete action games, existence of a mixed-strategy Nash equilibrium
- continuous action games (continuous action games with convex cost functions, examples)
- variational inequalities, game mappings, and their connection to Nash equilibria problems in convex games
- existence and uniqueness of Nash equilibrium in convex games
- gradient methods in convex games (convergence in the case of games with strongly monotone mappings, non-convergence in the case of games with purely monotone mappings, regularized algorithms and their convergence)
- state of the art (convergence rate discussion, information settings in the system: communication- and payoff-based methods, modern applications and their challenges)

2 Learning objectives

	Firsly, students refresh the knowledge on the classical results in convex optimization. Next, students deal with two main types of optimization problems in multi-agent systems: cooperative and non-cooperative optimization. Some practical examples are demonstrated. Students learn how to solve cooperative optimization problems by mean of consensus-type communication-based algorithms in the networked multi-agent systems. Moreover, they get insights in the modern applications and current challenges of cooperative optimization. In the case when each agent in a multi-agent system follows the goal to optimize its own objective a so-called non-cooperative game-theoretic optimization problem is formulated in the system. Students are able to formulate this problem, namely to define a game with its main component and solution concepts (action sets, individual cost funtions, Nash equilibria). Further the focus is on continuous action convex games. To find a solution (a Nash equilibrium in a given game), students use the connection between Nash equilibria in games and solutions of the corresponding variational inequalities. Furthemore, students are able to investigate the properties of the game (strongly/strictly monotone, merely monotone game) to apply an appropriate optimization procedure (gradient-based or regularized one) to achieve a solution. Finally, students get insights in different settings of information in the game-theoretic optimization (where only partial information is available to each agent) and know approaches that can be applied in each case.
3	**Recommended prerequisites for participation** Mathematics I, II, III
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)

Module name Transport Protocols and their Design					
Module nr. 18-sm-2320	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Irregular
Language German			**Module owner** Prof. Dr. rer. nat. Björn Scheuermann		

1	**Teaching content** This module covers in-depth knowlege about transport protocols and related aspects. We will consider robustness, ease of implementation, efficiency, performance and reliability. Of particular interest will be how to model the protocol behavior and the interplay of transport protocols with other layers of the Internet protocol stack. The focus will be on the Transmission Control Protocol (TCP) and its variants.
2	**Learning objectives** After taking this module, students understand the protocol mechanisms of the transport layer in detail, including their interplay within the layer and with other protocol layers. They can use this knowledge to predict and evaluate the effects of protocol modifications. To this end, they are able to analyze the behavior of transport protocols and to assess the impact of key parameters including latency, bandwidth and buffer size on the suitability of different design variants.
3	**Recommended prerequisites for participation** Basic knowledge in the field of communication networks, as covered for instance in the module „Kommunikationsnetze 1".
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS) The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 30 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc etit, BSc/MSc iST, MSc WI-etit
8	**Grade bonus compliant to §25 (2)** Yes
9	**References** Technical literature will be mentioned in the lecture.

Module name One World Signal Processing Seminar Series					
Module nr. 18-pe-2090	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1	**Teaching content** This seminar series covers addresses latest trends in Signal processing with focus on mobile communications, machine learning and optimization.
2	**Learning objectives** Students understand the presented research topics, e.g., the latest trends in • Signal processing • Communications • Graph signal processing • Machine learning for communications and data analysis • Coexistence of radar and communications • Compressed sensing and sampling theory • Convex Optimization Students learn to prepare themselves for the participation in a scientific seminar based on reference to the scientific literature. Students learn to participate in scientific seminars, to contribute with thoughtful comment and appropriate questions and to initiate a fruitful scientific discussion. Students learn to summarize the main scientific findings and statements of the talk in a short written report. Students learn to summarize the main scientific findings of the talk in a scientific discussion and to defend the main statements.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral/written examination, Default RS) Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc etit, BSc/MSc iST, MSc WI-etit

Module name Application-Layer Protocols on the Internet					
Module nr. 18-sm-2330	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Irregular
Language German			**Module owner** Prof. Dr. rer. nat. Björn Scheuermann		

1	**Teaching content** The module covers in-depth knowledge on application architectures and application-layer protocols used on the Internet. This includes widely used client-server protocols like HTTP as well as distributed architectures (peer-to-peer systems, blockchains, etc.). The focus is on tradeoffs between design alternatives and the acquisition of the skills to design and implement efficient and effective protocols on the application layer.
2	**Learning objectives** After taking this module, students understand the key questions that the design of an application-layer protocols poses. They understand the design space and are able to recognize and avoid common problems and mistakes. They can apply this knowledge to design and analyze protocol designs, and they are able to design suitable protocol mechanisms for practically relevant design problems.
3	**Recommended prerequisites for participation** Basic knowledge in the field of communication networks, as covered for instance in the module „Communication Networks I".
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS) The examination takes place in form of an oral examination (duration: 30 minutes). If one can estimate that more than 30 students register, the examination will be a written exam (duration: 120 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc etit, MSc WI-etit, BSc/MSc iST
8	**Grade bonus compliant to §25 (2)** Announcements will be made at the beginning of the semester as to whether there will be homework assignments to accompany the lecture that will improve grades.
9	**References** Technical literature will be mentioned in the course.

Courses

Course Nr. 18-sm-2330-vl	**Course name** Application-Layer Protocols on the Internet		
Instructor Prof. Dr. rer. nat. Björn Scheuermann		**Type** Lecture	**SWS** 3
Course Nr. 18-sm-2330-ue	**Course name** Application-Layer Protocols on the Internet		
Instructor Prof. Dr. rer. nat. Björn Scheuermann		**Type** Practice	**SWS** 1

1.2 Optional Subjects SES: System on Chip and Embedded Systems

Please note that the following modules are availably only in the Bachelor of Science: 18-ho-1000, 18-hb-1000

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-ho-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Klaus Hofmann		

1	**Teaching content** Analysis of basic electronic circuits and presentation of selected examples
2	**Learning objectives** After attending the seminar, a student is capable of analysing basic electronic circuits and preparing didactical materials and presentations
3	**Recommended prerequisites for participation** Electronics
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References** Will be provided at the begin of the seminar

Courses

Course Nr. 18-ho-1000-ps	**Course name** Proseminar Electrical Engineering and Information Technology	
Instructor Prof. Dr.-Ing. Klaus Hofmann	**Type** Introductory seminar course	**SWS** 2

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-hb-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Christian Hochberger		

1	**Teaching content** Read published books or papers on a given subject in Electrical Engineering and Information Technology. Write a summary and present it using multi media technology.
2	**Learning objectives** The student will be able to understand and analyse scientific papers, to present technical facts properly and well structured. He knows how to summarize and present the given topic.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc MEC, BSc iST
8	**Grade bonus compliant to §25 (2)**
9	**References**

Courses

	Course Nr. 18-hb-1000-ps	**Course name** Proseminar Electrical Engineering and Information Technology		
	Instructor Prof. Dr.-Ing. Christian Hochberger		**Type** Introductory seminar course	**SWS** 2

Module name High-Level Synthesis					
Module nr. 18-hb-2020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Christian Hochberger		

1 Teaching content

- Mapping of behavioral descriptions (e.g. in the form of program fragments) on FPGA and CGRA structures
- Sub-tasks allocation, scheduling, binding
- Exact or heuristic solutions
- Design principles of heuristic solutions

2 Learning objectives

Students that have completed this module know alternative approaches for all of the tasks of the high level synthesis and can select appropriate ones for specific applications. They can evaluate the memory and time complexity of the given algorithms. They are enabled to adapt the algorithms for new constraints and new target technologies.

3 Recommended prerequisites for participation

Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, BSc/MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

9 References

English slides can be obtained through Moodle.

Courses

Course Nr.	**Course name**		
18-hb-2020-vl	High-Level Synthesis		
Instructor		**Type**	**SWS**
Prof. Dr.-Ing. Christian Hochberger		Lecture	3

	Course Nr. 18-hb-2020-ue	**Course name** High-Level Synthesis		
	Instructor Prof. Dr.-Ing. Christian Hochberger		**Type** Practice	**SWS** 1

Module name Low-Level Synthesis					
Module nr. 18-hb-2010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Christian Hochberger		

1	**Teaching content** The module deals with synthesis steps on all abstraction layers below the register transfer level focusing on approaches suitable for FPGAs. At the logic level different types of minimization are explained (exact and heuristic two level minimizations, exact and heuristic multi level logic minimizations). The transition to the technology level is achieved by different decomposition and structural mapping techniques (FlowMap). Place&Route add geometric information to the technology mapped circuit. Analytical and heuristic placers are discussed (Simulated Annealing, Genetic Placers) and routing is illustrated through the PathFinder algorithm.
2	**Learning objectives** After completion of the module, students are enabled to investigate synthesis approaches for low level synthesis tasks. They can evaluate these approaches regarding their time and space complexity, as well as regarding their applicability to specific implementation technologies. Students can apply these approaches to new architectures and technologies.
3	**Recommended prerequisites for participation** Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

Module name Projektseminar Rekonfigurable Systems					
Module nr. 18-hb-2040	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Christian Hochberger		

1 Teaching content

Students will work in small groups in this course. Topics and application context will be defined individually for each group. All projects will follow the same approach. At first, the given problem will be described in a programmatic way. Following, it will be implemented by a reconfigurable system. Depending on the nature of the application, either predefined architectures will be used, parameterizable architectures will be adapted to the needs of the application or new architectures may be designed. The programmatic description will now be mapped (semi-)automatically to the chosen architecture with the help of the supporting tools. Usually, this requires to rewrite the programmatic description to better suit the tools. Finally, the solution will be evaluated using some benchmark data sets.

2 Learning objectives

Successful students will know how to use reconfigurable systems within a given application context. They can use tools to program these systems and know how to map an application onto a given reconfigurable architecture. They are capable to evaluate the performance critical parts of an application. They understand the implications of different coding styles for a particular task.

3 Recommended prerequisites for participation

- Knowledge of reconfigurable devices (cf. course computer systems II)
- Knowledge of computer architecture (cf. course computer systems I)
- Solid programming skills (either in C or Java depending on the application scenario).

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc iST, MSc Informatik, MSc iCE

8 Grade bonus compliant to §25 (2)

9 References

Will be made available through the Moodle page for this course.

1 Teaching content

- Introduction to the MP3 encoding standard for audio signals
- Analysis of the individual steps of the decoding process wrt. the used algo-rithms
- Analysis of the individual steps of the decoding process wrt. the storage of in-termediate results
- Design and configuration of the datapath to realize the individual process steps
- Simulation on functional level and with timing annotation
- Check, whether the design meets all restrictions
- Test of the final HW design with all relevant MP3 variants (short and long frames)

2 Learning objectives

After successfully completing the module, students will be able to map complex processes onto a digital target architecture by hand. They master the tools for implementing their solution on an FPGA. They know strategies to systematically search for errors. They can explore a design through simulation.

3 Recommended prerequisites for participation

Basic knowledge of digital design

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral examination, Weighting: 100 %)

7 Usability of the module

BSc ETiT, BSc iST

8 Grade bonus compliant to §25 (2)

Module nr. 18-dt-2010	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Ralf Steinmetz		

1 Teaching content

To get an idea about current trends in industry. In addition, to give a glimpse of job opportunities the industry will provide after graduation. Acquired competences are:

- Active knowledge about industry trends and applications in multimedia communications
- Build contact with persons from various important companies
- Presentation skills improvement

2 Learning objectives

Today, the Internet is much more than just a browser window on your desktop-PC. It is a part of our everyday life and has become ubiquitous thanks to smartphones, tablet-PCs and laptops. This pervasiveness of the Internet requires tremendous effort on the provider side. This is due to the fact that the Internet itself is a communication system with a vast number of mechanisms running on different functional layers. With the rapid increase of mobile devices, traffic consumption, and the sheer number of users, many of those mechanisms reach their limits. This problem becomes visible to the end user, if, for example, large crowds of people suddenly overload the mobile communication infrastructure.

With the recently established collaborative research center MAKI (Multi-Mechanismen-Adaption für das künftige Internet) scientists of TU Darmstadt study the possibilities of coordinated and automated transitions between different mechanisms of a communication system. Thereby, the Future Internet will be able to react to changes by, for example, switching from the mobile communication infrastructure to a local ad-hoc network between users if the demand by users exceeds the resources of the available infrastructure.

In this year's industrial colloquium, partners from the industry present their visions, challenges and solutions regarding the Future Internet. Additionally, researches from TU Darmstadt provide insights into current scientific work in the context of the collaborative research center MAKI.

3 Recommended prerequisites for participation

Mandatory: Basic knowledge in Information Systems and Commubnication Systems. The sutdent has to be capeable to understand the technical aspects and to summerize them in a written report as a short paper.

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

1 Teaching content

Printing technologies for functional printing (printing methods and systems); Design and materials for printed electronics (aerial, OFET, RFID); Activities for quality assurance; Examples of application (aerial, RFID, OFET, photovoltaic, batteries, lab on a chip).

2 Learning objectives

On successful completion of this module, students should be able to:

1. Describe the printing technologies that are applicable for “Printed Electronics”.
2. Name materials that are appropriate to printing processes and to describe the impact of the materials on the design e.g. of antennas and OFETs.
3. Classify and rate different activites for quality assurance.
4. Explain basic functions, configurations, materials, and specific properties of printed antennas, RFIDs, photovoltaics and batteries.
5. Describe “Printed Electronics” as a multidisciplinary task that consists of electrical engineering, material science, and mechanical engineering.

3 Recommended prerequisites for participation

Mechanical components and Mechatronics I and II recommended

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

Oral exam 30 min

5 Prerequisite for the award of credit points

Passing the examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module

WPB Master MPE III (Wahlfächer aus Natur- und Ingenieurwissenschaft)
WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik)
Master ETiT IMNT; Master Mechatronik

8 Grade bonus compliant to §25 (2)

Language German			**Module owner** Prof. Dr.-Ing. Klaus Hofmann		

1	**Teaching content** Research-oriented project in the domain of Integrated Electronic Systems or Microelectronic System Design, Final Report and Presentation of Results in a Team
2	**Learning objectives** After completion of this module, a student is able to fulfill/implement a given task or project in the domain of Integrated Electronic System design (optionally in a group of students), write a final report and present the results to an audience.
3	**Recommended prerequisites for participation** Lecture Electronic and Integrated Circuits
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, Wi ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References** Material on the subject will be handed out

Courses

	Course Nr. 18-ho-1060-pj	**Course name** Project Seminar Integrated Electronic Systems	
	Instructor Prof. Dr.-Ing. Klaus Hofmann	**Type** Project seminar	**SWS** 4

Module name Project Seminar Computer Systems					
Module nr. 18-hb-1040	**Credit points** 9 CP	**Workload** 270 h	**Self study** 210 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Christian Hochberger		

1	**Teaching content** Students elaborate on a research-oriented subject in the area of computer-systems. They present a written documentation and a presentation of the acquired advanced knowledge. They provide a set of alternative solutions to a given problem.
2	**Learning objectives** Students are able to systematically develop design alternatives to a given problem. They learn to acquire the necessary fundamental knowledge in terms of references and terminology.
3	**Recommended prerequisites for participation** Basic knowledge of digital design
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc/MSc iST

Language German/English			**Module owner** Prof. Dr. rer. nat. Oskar von Stryk		

1 Teaching content

These labs are intended for students interested in obtaining hands-on practical experience with the design and implementation of embedded systems.

The labs will begin by introducing fundamentals such as

- basic electrical engineering
- using lab test and measurement instruments
- design and fabrication of electronic circuits
- acquiring and processing data from sensors
- bus protocols in embedded systems
- programming and debugging heterogeneous embedded systems
- the use of the Linux kernel as an operating system in an embedded context

The lab core then has the participants implement a concrete embedded system. A number of possible projects will be offered, each with a different focus (e.g., hardware or software) to match student interest.

2 Learning objectives

After successful completion, students are familiar with the practical techniques and tools required for designing, implementing and bringing-up embedded hardware/software systems.

This includes basic knowledge of electrical engineering, the use of lab test and measurement instruments, the use of languages and EDA/CAD tools for hardware design. They are able to program and debug software in an embedded systems context as well as employ Linux as an operating system here.

3 Recommended prerequisites for participation

Recommended: Successful completion of „Digital Design“, „Computer Organisation“, „Architecture and Design of Computer Systems“, „Operating Systems“ and „System-level and Parallel Programming“ or similar competencies obtained in other study programmes

4 Form of examination

Course related exam:

- [20-00-0959-pr] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:

- [20-00-0959-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Language German			**Module owner** Prof. Dr.-Ing. Andreas Koch		

1	**Teaching content** These practical labs are intended for students interested in learning how to design hardware accelerators for systems-on-chips. It covers a wide range of topics, including - OS drivers for accelerators - design and interfacing of accelerators in Bluespec SystemVerilog - Design flows and tool chains for hardware/software co-development The actual accelerators covered are inspired by typical applications, e.g., image processing or stereovision computations.
2	**Learning objectives** Acquire skills in using the knowledge and techniques taught in prior classes to actually perform a complete hardware/software co-design of an application in an embedded systems context.
3	**Recommended prerequisites for participation** Basic knowledge using Linux on embedded Systems (e.g., acquired in ESHO1). Knowledge of the Bluespec SystemVerilog hardware description language (e.g., as taught in Architecture and Design of Computing Systems).
4	**Form of examination** Course related exam: • [20-00-0968-pr] (Study achievement, Oral/written examination, Default RS)

Module nr. 20-00-1001	**Credit points** 9 CP	**Workload** 270 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Andreas Koch		

1	**Teaching content** The course covers current topics in research and development of computing systems and programming tools, including focused ones in the areas of embedded and application-specific architectures. The subjects are determined by current research efforts in the ESA group and are intended to guide students towards acquiring technical as well as introductory scientific skills, for example, including one or more of the following domains: - Computing systems architecture at the processor and systems-level - Design of digital electronic circuits and hardware systems - Use of Field-Programmable Gate Arrays Hardware/Software design and programming tools - Operating systems and low-level programming Hardware/Software Co-Design Application-specific architectures and techniques - Design and/or programming of compute accelerators - Debugging and analysis techniques for hardware/software-systems
2	**Learning objectives** Participants are intended to acquire the skills necessary to quickly become familiar with a new domain and then solve a complex practical problem within that domain. These skills can include studies of scientific literature, surveying existing code-bases from the hardware/software domains, and the practical implementation of hardware and/or software systems. The final talk should show proficiency with basic presentation techniques.
3	**Recommended prerequisites for participation** An interest to develop high-quality solutions in the assigned problem domain. For different domains, different pre-requisites will be required. These can include digital design, compiler construction, system-level and parallel programming. Such skills can be acquired by successfully completing the appropriate lectures.
4	**Form of examination** Course related exam: • [20-00-1001-pp] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1001-pp] (Study achievement, Oral/written examination, Weighting: 100 %)

Module name Practical Programming of FPGAs using High-Level Languages					
Module nr. 20-00-1081	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr.-Ing. Andreas Koch		

1 Teaching content

FPGAs have been used very successfully in recent years to implement application-specific accelerators in heterogeneous systems. However, programming with conventional hardware description languages such as Verilog or VHDL is still the norm.

As an alternative, high-level synthesis tools that can also generate hardware from high-level languages such as C/C++ play an increasingly important role in the implementation of such accelerators. During this course you will gain useful background knowledge on the basic algorithms of high-level synthesis as well as knowledge in practical design and optimization of FPGA designs using high-level synthesis tools.

In addition, you will learn relevant techniques for the integration of FPGA-based accelerators into heterogeneous systems. During the practical phase of this course, you will create an FPGA-based accelerator for a given problem and implement it on a typical heterogeneous system in real hardware.

2 Learning objectives

- Understanding the basics of HLS systems

- Understanding of important internals of HLS systems (e.g. optimization, scheduling)

- Ability to design high-level language hardware accelerators and use HLS systems to generate executable FPGA designs

- Experience in troubleshooting and optimization of HLS generated hardware designs

- Experience in the integration of hardware accelerators into heterogeneous computing systems using hardware/software co-design tools.

3 Recommended prerequisites for participation

- Basics of Digital Logic (DT))

- Basics of Computer Architecture (Computer Organization RO, Architecture and Design of Computer Systems (AER)

- Basic knowledge of compilers is dvantageous, but not obligatory

- Using Linux systems and virtual machines

4 Form of examination

Course related exam:

Instructor Prof. Dr.-Ing. Klaus Hofmann		**Type** Seminar	**SWS** 3

Module name Modelling and simulation of circuits					
Module nr. 18-sc-2010	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German/English			**Module owner** Prof. Dr. rer. nat. Sebastian Schöps		

1 Teaching content

The content of this course is the following:

- Circuit interpretation as directed graphs
- Modified nodal and loop analysis
- Flux and charge oriented formulations
- Differential algebraic equations
- Linear system solver
- Numerical solution of nonlinear systems
- Time-domain methods
- Frequency-domain solution
- Implementation of the numerical methods

2 Learning objectives

Students understand the theoretical and numerical fundamentals of circuit simulation and how the equations can be derived from Maxwell's equations. Circuit properties can be expressed in tems of graph theory. The sparse systems of equations such as the flux/charge oreinted modified nodal analysis can be assembled. In order to solve the obtained systems, different numerical methods for the simulation of circuits are relevant. This includes methods for the solution of linear systems (direct and iterative solvers), root-finding algorithms for nonlinear systems and implicit time integration methods. Mathematical concepts such as stability, convergence order or complexity are known and can be employed to judge the advantages and disadvantages of the various methods. Eventually, the students are able to programm their own circuit simulator, that can return both frequency as well as time domain solutions of electric networks.

3 Recommended prerequisites for participation

18-hs-1070 Elektrotechnik und Informationstechnik I, 18-gt-1020 Elektrotechnik und Informationstechnik II, 20-00-0304 Allgemeine Informatik I, 04-10-0602 Statistics/Probability Theory, 04-10-0603 Scientific Computing

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module

BSc/MSc etit, BSc/MSc iST, BSc MEC, MSc iCE, MSc WI-etit

8 Grade bonus compliant to §25 (2)

Grade bonus of 0,4 if correctly implemented programs are submitted

1.3 Optional Subjects SWE: Software-Engineering

Please note that the following module is availably only in the Bachelor of Science: 18-su-1000

Module name Proseminar Electrical Engineering and Information Technology					
Module nr. 18-su-1000	**Credit points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. rer. nat. Andreas Schürr		

1	**Teaching content** In this course, the students produce scientific reports from changing subject areas. Each student has to explore a subject related to IT system development and produce a written report as well as a final talk with a presentation. A list of the subjects of the current semester is available at www.es.tu-darmstadt.de/lehre/sst.
2	**Learning objectives** After a successful participation, the students will be able to explore an unknown topic under scientific aspects. The students learn to support the exploration by a literature research and to analyze the subject critically. They achieve the skills to present a definite subject in a written report as well as in an oral presentation.
3	**Recommended prerequisites for participation** Introduction to Computer Science for Engineers, Software Lab; Software Engineering I or comparable skills
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, Informatik, iST, Wi-ETiT

1 Teaching content

The programming lab is divided into two parts.
In the first part of the lab, the basic concepts of the programming languages C and C++ are taught during the semester through practical exercises and presentations. All aspects will be deepened by extended practical exercises in self-study on the computer. For this purpose, all necessary materials such as presentation slides, presentation recordings, exercises, sample solutions of the exercises and recordings of the exercise discussions are provided in purely digital form.
The second part of the lab is about programming a microcontroller using the C programming language. For this purpose, the students are provided with a microcontroller for two days, with which they can work on practical programming tasks under supervision.
The following topics will be covered in the course:

- Basic concepts of the programming languages C and C++
- Memory management and data structures
- Object oriented programming in C++
- (Multiple) Inheritance, polymorphism, parametric polymorphism
- (Low-level) Programming of embedded systems with C

For more details please visit our course website: http://www.es.tu-darmstadt.de/lehre/aktuelle-veranstaltungen/c-und-c-p and the corresponding Moodle course.

2 Learning objectives

During the course, students acquire basic knowledge of C and C++ language constructs. Additionally, they learn how to handle both the procedural and the object-oriented programming style. Through practical programming exercises, students acquire a feeling for common mistakes and dangers in dealing with the language, especially in the development of embedded system software, and learn suitable solutions to avoid them. Furthermore, through hands-on experience with embedded systems, students acquire additional expertise in low-level programming.

3 Recommended prerequisites for participation

Java skills

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)

The examination has the form of a Report (including submission of programming code) and/or a Presentation and/or an Oral examination and/or a Colloquium (testate). From a number of 10 students registered for the course, the examination may take place in form of a written exam (duration: 90 minutes). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

BSc ETiT, BSc MEC, BSc iST, BSc Wi-ETiT

8 Grade bonus compliant to §25 (2)

	Grade improvements up to 0.4 according to APB 25(2) can be achieved through a bonus system for regularly submitted bonus assignments. The course content is divided into the following topics as part of the exercise: (1) Fundamentals, (2) Memory Management, (3) Object Orientation, (4) Advanced Concepts, (5) C and Embedded C. There is one assignment sheet for each of the first four topic areas (1-4), whereas the last topic area (5) is divided into two assignment sheets. Each assignment sheet is to be solved and handed in by the students. An assignment sheet is considered either passed or failed. The bonus is credited in proportion to the ratio of passed assignment sheets and the total number of assignment sheets. Total bonus = 0.4 × Number of passed tasks / Total number of bonus tasks

Module name Real-Time Systems					
Module nr. 18-su-2020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. rer. nat. Andreas Schürr		

1 Teaching content

The lecture basically covers a model-driven software engineering process which is specially customized for real-time systems. This process is more deeply explored in the exercise using an automotive example. A focus is laid on object-oriented techniques. In this context, a real-time specific state-of-the-art CASE tool is introduced and used. Furthermore, fundamental characteristics of real-time systems and system architectures are introduced. Scheduling algorithms are discussed to get insights into real-time operating systems. Finally, a comparison between the Java programming language and its expansion for real-time operating systems (RT Java) will conclude the lecture.

2 Learning objectives

Students, who have successfully attended this lecture have acquired skills needed for the model-driven and object-oriented development of embedded real-time systems. This includes a deeper understanding of the following topics:

- classification of real-time systems
- create and analyze executable models
- application of real-time scheduling algorithms
- evaluation and comparison of pros/cons of real-time programming languages as well as real-time operating systems

3 Recommended prerequisites for participation

Basic knowledge of software engineering techniques and excellent knowledge of at least one object-oriented programming language (preferably Java)

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, BSc iST, MSc Wi-ETiT, BSc Informatik

8 Grade bonus compliant to §25 (2)

	Instructor Prof. Dr.-Ing. Ermira Mezini		**Type** Internship	**SWS** 4

Module name Autonomous Driving Lab I					
Module nr. 18-su-2070	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr. rer. nat. Andreas Schürr		

1 Teaching content

During this module students gain practical experience in software development for embedded systems in the field of autonomous driving using a model car. In teamwork, they learn to cope with an extensive task. In order to solve this task they practice to use the theoretical knowledge available in the group (from other courses such as real-time systems, software engineering - introduction, C++ lab, digital control systems).

- Hands-on programming experience with C++ in the development of embedded software systems for autonomous driving based on a model car
- Application of control methods from the area of autonomous driving
- Application of software engineering techniques (design, documentation, test, ...) of a non-trivial embedded software system with hard real-time requirements and limited resources (memory, ...)
- Use of a given software framework and further libraries including a modular (real-time) operating system
- Hands-on experience using source code management systems, time management and other project management tools
- Presentations of the project results

2 Learning objectives

Students that have successfully participated in this module are able to organize and set-up a non-trivial software project in an interdisciplinary team according to a given problem independently. The participants acquire the following skills in detail:

- Independent familiarization with a given software framework and ready-made libraries
- Transfer of theoretic knowledge into a software system
- Extensive use of tools for version, configuration, and change management
- Realistic time and resource management (project management)
- Development of hardware/software systems with C++ considering important limitations of embedded systems
- Planning and implementation of extensive quality assurance measures
- Collaboration and communication in and between teams

3 Recommended prerequisites for participation

- ETiT/DT, iST, Informatik, WI-ET/DT: Basic software technology knowledge and advanced knowledge of object-oriented programming languages (especially C++)

Additionally desired:

- Basic knowledge of the development of real-time systems or image processing
- ETiT/AUT, MEC: Basic knowledge in control engineering including state space control design, some additional basic knowledge in digital control design may be helpful

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Study achievement, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, BSc iST
8	**Grade bonus compliant to §25 (2)**

1 Teaching content

- Further development and optimization of a robust C++ framework for solving non-trivial problems in the field of autonomous driving based on realistic challenges from the Carolo Cup, an international student competition for autonomous model cars
- Development and implementation of different algorithms (e.g., for motion planning, image processing, control, and obstacle avoidance) in an embedded system with hard real-time requirements and limited resources (memory, ...)
- Application and further development of control methods in the field of autonomous driving
- Application of software engineering techniques (design, documentation, testing, ...) for solving the problem
- Using source code management systems, time management and other project management tools
- Presentations of the project results

2 Learning objectives

Students learn to independently develop, implement and present new concepts and algorithms in the field of autonomous driving. Realistic problems from the Carolo Cup are solved with existing knowledge and skills practically and the implementation is ensured by quality assurance measures.

Students who have successfully participated in this project seminar are able to independently analyze and solve a complex and realistic task in the field of autonomous driving. The participants acquire the following skills in detail:

- Further development and optimization of an existing software system and the used algorithms independently
- Solving and implementation of non-trivial, realistic control engineering challenges
- Extensive use of tools for version, configuration, change, and quality assurance management
- Realistic time planning and resource allocation (project management)
- Further development and optimization of complex hardware/software systems under realistic environmental conditions
- Planning and implementation of extensive quality assurance measures
- Collaboration, communication and organization within the team

3 Recommended prerequisites for participation

Previous participation in the project seminar "Autonomous Driving I" or course with similar content.

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral examination, Weighting: 100 %)

7 Usability of the module

Language German			**Module owner** Prof. Dr. rer. nat. Andreas Schürr		

1	**Teaching content** The course deals with various development and research topics in the area of model-driven engineering and object-oriented software engineering. Besides a general overview, it provides a deep insight into a special scientific topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and scientific competences in one or more of the following topics: • Model-Driven Enginnering and Model Synchronization • Model Transformation • Object-Oriented Refactorings • Program Variability (Software Product Lines) • Feature Model Analysis Additional information and topic description for the current semester: http://www.es.tu-darmstadt.de/lehre/aktuelle-veranstaltungen/projektseminar-softwaresysteme/
2	**Learning objectives** The student gains practical experience in development (reengineering and maintenance) of complex software systems. He/She learns to work and function in a team, and to analyze and solve a non- trivial task. Moreover, students exercise using theoretical knowledge in the group (e.g. from lectures like software engineering - introduction / Design / Maintenance & Quality Assurance) to solve a concrete and practical problem. Students that have successfully completed this seminar are able to independently organize and set-up a non-trivial software project and function to analyze and solve a certain task. Attendees gain the following skills in detail: • realistic time and resource management (project management) • experience with tools for version control and change management • usage of CASE tools for model- based software development • planning and execution of quality assurance measures
3	**Recommended prerequisites for participation** Mandatory: Basic software technology knowledge and advanced knowledge of object-oriented programming languages
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, MSc ETiT, BSc iST
8	**Grade bonus compliant to §25 (2)**
9	**References**

	Each topic is covered by a specific selection of papers and articles.

Courses

Module name Modeling, Specification and Semantics					
Module nr. 20-00-0013	**Credit points** 5 CP	**Workload** 150 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. phil. nat. Marc Fischlin		

1	**Teaching content** - introduction to modeling using predicate logic and algebraic concepts - interpretation and faithfulness of formal models - systematic construction of models and making of design decisions - abstraction, refinement, composition, and decomposition of models - syntax and operational semantics of programming languages - elementary proof techniques and their use - introduction to specification languages - syntax and denotational semantics of specification languages - modeling communication and coordination in concurrent systems - taxonomy of system properties
2	**Learning objectives** After successfully participating in this course, students know basic concepts in the areas modeling, specification, and semantics. They are able to use predicate logic and algebraic concepts to formalize given, informally described scenarios. They are able to develop formal models in a systematic fashion, to make necessary design decisions, and to employ informal notation and graphics to facilitate the construction of formal models. They know selected formal specfication languages and are able to apply at least one such language. They understand the distinction between the syntax and semantics of formal languages and are able to prove propositions about expressions as well as simple meta-properties about the languages themselves. They are able to formalize basic system requirements as predicates and can assess the faithfulness of such formalizations.
3	**Recommended prerequisites for participation** Recommended: Participation of lecture “Automaten, formale Sprachen und Entscheidbarkeit” and “Aussagen- und Prädikatenlogik”, respective according knowledge.
4	**Form of examination** Course related exam: • [20-00-0013-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0013-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik B.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

	In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.			
9	**References** U. Kastens, H. Kleine Büning: Modellierung - Grundlagen und formale Methoden, Hanser G. Winskel: The Formal Semantics of Programming Languages, MIT Press C. A. R. Hoare: Communicating Sequential Processes, Prentice-Hall Literature recommendations will be updated regularly.

Module nr. 20-00-0904	**Credit points** 5 CP	**Workload** 150 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. phil. nat. Marc Fischlin		

1	**Teaching content** - Structure of compilers - Context-free grammars for the description of language syntax - Lexing and parsing techniques - Intermediate representations - Semantic analysis - Run-time organisation - Code generation - Software tools for compiler constructions - Implementation techniques for compilers
2	**Learning objectives** After successfully attending the course, students are familiar with the structure of compilers. They understand formal concepts for the description of syntax and semantics of programming languages. They can combine these concepts with algorithmic techniques to independently construct a compiler that maps a specified programming language to a given target machine. They know software tools supporting the construction of compilers and can apply these together with manual techniques to implement the compilers.
3	**Recommended prerequisites for participation** Recommended: Participation of lecture “Algorithmen und Datenstrukturen”, “Funktionale und objektorientierte Programmierung” and “Rechnerorganisation”, respectively according knowledge.
4	**Form of examination** Course related exam: • [20-00-0904-iv] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%) Course achievement may be acquired through exercises, hands-on training, programming and successfull discussion on colloquiums. Each area must be passed.
6	**Grading** Course related exam: • [20-00-0904-iv] (Study achievement, Oral/written examination, Weighting: 100 %)

Module nr. 20-00-0580	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr.-Ing. Heiko Mantel		

1	**Teaching content** - operational semantics for sequential and parallel programs - overview of techniques for static and dynamic program analysis - abstract interpretation - data flow analysis - slicing techniques - type-based program analysis - concepts of runtime monitoring - techniques for implementing runtime monitoring - language-based security - soundness and precision of program analysis
2	**Learning objectives** After successfully participating in this course the students will know a range of different program analyses. The students will understand the functionality of each program analysis and the difference between each of the considered program analyses. Furthermore, the students will be able to judge which program analysis is suitable for a specific problem, and they will be able to apply the different program analyses. The students will also be able to judge the precision and soundness of program analyses. Finally, the students will be able to implement and define the considered program analyses and variants of them.
3	**Recommended prerequisites for participation** Knowledge of Computer Science and Mathematics equivalent to the first four semesters in the Computer Science Bachelor program, in particular basic knowledge about logic and the ability to understand formal calculi.
4	**Form of examination** Course related exam: • [20-00-0580-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0580-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

Module name Software Engineering for Artificial Intelligence					
Module nr. 20-00-1097	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr.-Ing. Ermira Mezini		

1	**Teaching content** Data-driven artificial intelligence (AI) solutions are being adopted in many areas, including finance, medicine, cognitive sciences, and biology. Such machine learning (ML) approaches require an accurate domain and requirement analysis, proper software design and development, dedicated testing and debugging, as well as specific techniques that ensure scalability and maintainability. While AI-enabled systems continue to have a tremendous impact on many fields, developers and data scientists still follow methods (scripting, informal/non-written specifications, trial-and-error testing) that do not conform to the state of the art of engineering disciplines. In this context, it is of paramount importance to take advantage of the decades-long developments of software engineering (SE) to systematize the development process of ML solutions. In this course, each student will be assigned a topic regarding SE for AI. Based on provided resources and personal extending research, each student prepares a presentation with following discussion. These will be conducted in regular appointments. The students not presenting at a particular date, prepare via introductory reading for the respective discussion. Grading will be based on the preparation of the assigned topic and its presentation, as well as on the participation in all the discussions. For more information and announcements, please consult the course webpage: https://allprojects.github.io/SE4AI/
2	**Learning objectives** The students develop a deeper understanding of software engineering for artificial intelligence. This includes the key topics requirements engineering, quality assurance, development processes, and software architecture and design accounting for modularity, reusability, efficiency, scalability, fairness and privacy. The students learn the preparation and the presentation of scientific contents for an audience with heterogeneous background knowledge. Moreover, students train efficient preparation of and active participation in scientific discussions as well as their moderation.
3	**Recommended prerequisites for participation** Recommended: Basic knowledge regarding software engineering. Interest in machine learning.
4	**Form of examination** Course related exam: • [20-00-1097-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Courses

Course Nr. 20-00-0953-iv	**Course name** Multithreading in C++	
Instructor Prof. Dr. rer. nat. Oskar von Stryk	**Type** Integrated course	**SWS** 6

Module name
Advanced Multithreading in C++

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
20-00-0977	6 CP	180 h	120 h	1 Term	Every 2. Semester

Language	Module owner
German/English	Prof. Dr. rer. nat. Oskar von Stryk

1 Teaching content

C++ offers one of the most modern threading interfaces available today. Using this interface as an example, the course teaches advanced techniques to develop parallel software for shared memory with threads.

Based on the contents of the course Multithreading in C++, this course will cover the following topics:
- C++ memory model and atomic operations
- Designing lock-free concurrent data structures
- Advanced thread management (e.g., thread pools)

2 Learning objectives

After successfully completing the course, the students have advanced skills of developing parallel programs. They are able to
- Systematically develop correct and efficient multithreaded programs
- Design and implement parallel data structures

3 Recommended prerequisites for participation
- Knowledge of C/C++
- Foundations of programming threads in C++ (lock-based synchronization and lock-based concurrent data structures)

4 Form of examination

Course related exam:
- [20-00-0977-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

Students who passed Modul "Fortgeschrittene parallele Programmierung 2" (FPPROG2), 20-00-0938 aren't allowed to pass this Modul.

6 Grading

Course related exam:
- [20-00-0977-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

9 References

Module name Data Management - Extended Lab					
Module nr. 20-00-1042	**Credit points** 9 CP	**Workload** 270 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** Participants independently solve alone or in a small group an individually a given problem. The problems are usually programming projects inspired by the research performed at the Data Management Lab. Possible areas are: - Scalable Databases & Modern Hardware - Cloud Databases & Blockchains - Interactive Data and Text Exploration - Natural Language Interfaces for Databases - Scalable Systems for Machine Learning In this lab the students will realise a project defined by their advisor. Compared to the "Data Management - Lab", the “Data Management - Extended Lab” requires more effort.
2	**Learning objectives** After completion of this course the students are able to - Understand state-of-the-art techniques in modern data management systems - Apply and implemenation of techniques in individual projects - Provide experimental evidence for design decisions with benchmarks and/or real workloads
3	**Recommended prerequisites for participation** Depending on selected topic.
4	**Form of examination** Course related exam: • [20-00-1042-pp] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1042-pp] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**
9	**References**

Module nr. 20-00-1017	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** This course introduces the fundamental concepts and computational paradigms of scalable data management systems. The focus of this course is on the systems-oriented aspects and internals of such systems for storing, updating, querying, and analyzing large datasets. Topics include: Database Architectures Parallel and Distributed Databases Data Warehousing MapReduce and Hadoop Spark and its Ecosystem Optional: NoSQL Databases, Stream Processing, Graph Databases, Scalable Machine Learning
2	**Learning objectives** After the course the student will have a good overview of the different concepts, algorithms, and systems aspects of scalable data management. The main goal is that the students will know how to design and implement such systems including hands-on experience with state-of-the-art systems such as Spark.
3	**Recommended prerequisites for participation** Programming in C++ and Java Informationsmanagement (20-00-0015-iv) Optional: Foundations of Distributed Systems (20-00-0998-iv)
4	**Form of examination** Course related exam: • [20-00-1017-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1017-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

Module nr. 20-00-1039	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** This is an advanced course about the design of modern data management systems which has a heavy emphasis on system design and internals. Sample topics include modern hardware for data management, main memory optimisations, parallel and approximate query processing, etc. The course expects the reading of research papers (SIGMOD, VLDB, etc.) for each class. Programming projects will implement concepts discussed in selected papers. The final grade will be based on the results of the programming projects. There will be no final exam.
2	**Learning objectives** Upon successful completion of this course, the student should be able to: - Understand state-of-the-art techniques for modern data management systems - Discuss design decision of modern data management systems with emphasis on constructive improvements - Implement advanced data management techniques and provide experimental evidence for design decisions
3	**Recommended prerequisites for participation** Solid Programming skills in C and C++ Scalable Data Management (20-00-1017-iv) Information Management (20-00-0015-iv)
4	**Form of examination** Course related exam: • [20-00-1039-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1039-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

2 Applications

2.1 Optional Subjects AIS-AS: Automotive Systems

Please note that the following modules are availably only in the Bachelor of Science: 16-03-5020

Module name Ride and Handling					
Module nr. 16-27-5020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr. rer. nat. Hermann Winner		
1	**Teaching content** Longitudinal and lateral dynamics; tyre influence on vehicle dynamics; vehicle dynamics control; suspension and kinematics; noise vibration harshness. Modelling of tyre, wheel, quarter car as well as longitudinal and lateral vehicle dynamics.				
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Derive vehicle longitudinal dynamics (achievable acceleration, deceleration and maximum velocity) from driving and frictional conditions as well as from the design of the power train and the brake system. 2. Employ the basic equations of lateral dynamics with the fundamental motion and force dimensions of the single-track model and describe and assess vehicle behaviour at steady state skidpad testing as well as at load changes during curve-driving. 3. Discuss measures which influence a vehicle's self-steering properties. 4. Explain the transmission of lateral forces between the road and tyre and discuss the interaction between longitudinal and lateral forces. 5. Locate the significance of tyres to vehicle vertical dynamics. 6. Substantiate the principal ESP estimation and control processes as well as to explain their meaning regarding to vehicle dynamics control. 7. Explain the effects of the kinematics of the wheel suspension on the vehicle handling, describe the axle kinematics, determine the position of the instantaneous centres of rotation for the vehicle's pitch and rolling axis, and sketch the distribution of the forces in a vehicle's suspension. 8. Describe the vibrations which can occur in a vehicle and name its respective sources as well as the relevance of its resonance frequencies. 9. List comfort measures and its assessing standards. 10. List steady and unsteady state road trials for handling and assessment and refer to results of road trials for making conclusions about handling characteristics. 11. Derive a modell of tyres, wheels, quarter car as well as longitudinal and lateral vehicle dynamics and technically discuss the simulation results.				
3	**Recommended prerequisites for participation** Fundamentals of automotive engineering, basic knowledge of technical mechanics (force diagram, equations of motion), basic knowledge of thermodynamics, basic knowledge of vibrations				
4	**Form of examination**				

	Module exam: • Module exam (Technical examination, Optional, Default RS) Written Exam 90 min or oral Exam 50 min
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** WPB Master MPE II (Kernlehrveranstaltungen aus dem Maschinenbau) WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik) WI/MB, MSc Traffic&Transport, (Vertiefungsmodul FB16, ggf. Auflage), Master Mechatronik, MSc. Informatik (Anwendungsfach Fahrzeugtechnik, Spezialisierung)
8	**Grade bonus compliant to §25 (2)**
9	**References** manuscript, e-Learning Materials via Moodle

Module name Automotive Mechatronics and Assistance Systems					
Module nr. 16-27-5040	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. rer. nat. Hermann Winner		

1 Teaching content

Electric power supply and hybrid systems; drivetrain, brake and steering mechatronics; driver and driver assistance models; measurement techniques of sensors; vehicle dynamics sensors; surrounding sensors; infrastructure depending sensors; actuators for engine, brakes, and steering; longitudinal control assistance; lateral control assistance; information and warning systems; active collision protection systems, safety, navigation and telematics; future assistance systems.

2 Learning objectives

On successful completion of this module, students should be able to:

1. List the requirements for a vehicle's electrical power supply system and explain the structure and principles of its main components.
2. Illustrate different types of hybrid-electric power trains and the mode of operation of a fuel cell.
3. Conduct a competent discussion about the future power train concepts as well as future power supply systems.
4. Illustrate the operating mode of active and mechatronical suspension, power train, brake, and steering components.
5. Classify driver assistance systems according to their category and operating mode.
6. Indicate special difficulties at recognising the vehicle's surrounding field and describe the consequences of these difficulties for the system utilisation.
7. Explain the effect chain of the sensors from detection over perception up to surrounding field representation for ultrasonic, radar, lidar, and video.
8. Describe the basic functions and the function limits of automatically acting driver assistance systems and collision mitigation systems.
9. Evaluate the benefits and modes of action of vehicle safety systems and illustrate the course of an accident and describe a crash test.
10. Illustrate the function of the modules necessary in the vehicle for navigation and conduct a competent discussion about the state of the art and the prospects of traffic telematics systems and assistance systems.

3 Recommended prerequisites for participation

Fundamentals of automotive engineering

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

Written exam 90 min or oral exam 45 min

5 Prerequisite for the award of credit points

Passing the examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

	WPB Master MPE II (Kernlehrveranstaltungen aus dem Maschinenbau) WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik) WI/MB, MSc Traffic&Transport, (Vertiefungsmodul FB16, ggf. Auflage), Master Mechatronik, MSc. Informatik (Anwendungsfach Fahrzeugtechnik, Spezialisierung)

Module name Technical Thermodynamics I					
Module nr. 16-14-5010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr.-Ing. Peter Stephan		

1	**Teaching content** Fundamental terms of thermodynamics; thermodynamic equilibrium and temperature; different forms of energy (internal energy, heat, work, enthalpy); properties and equations of state for gases and incompressible substances; first law of thermodynamics and energy balances for technical systems; second law of thermodynamics and entropy balances for technical systems; exergy analysis; thermodynamic behaviour during phase change; the carnot cycle for power generation or refrigeration; energy efficiency and coefficient of performance; cyclic processes for gas turbines, combustion engines, power plants, refrigerators and heat pumps.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Explain the relationships between thermodynamic properties and the thermodynamic state of a system and apply them within calculations of thermal system behaviour. 2. Distinguish between different types of energy (e.g. work, heat, internal energy, enthalpy) and define them. 3. Analyse technical systems and processes using energy balances and equations of state. 4. Assess energy conversion processes by means of an entropy balance or an exergy analysis. 5. Characterise the thermal behaviour of gases, liquids and solids and corresponding phase change processes. 6. Apply this basic knowledge (1.-5.) to examine machines (turbines, pumps etc.) and processes for energy conversion (combustion engine, power plants, refrigerators, heat pumps).
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 150 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** Bachelor MB Pflicht Bachelor WI-MB Master ETiT MFT, Bachelor Mechatronik
8	**Grade bonus compliant to §25 (2)**
9	**References** P. Stephan; K. Schaber; K. Stephan; F. Mayinger: Thermodynamik, Band 1: Einstoffsysteme, Springer Verlag. Further material (slides, collection of exercises, table of fomulas etc.) is available through the Moodle system of TU Darmstadt.

Language English			**Module owner** Prof. Dr. rer. nat. Hermann Winner		

1	**Teaching content** Global mobility; development trends; current research activities: system and function development on advanced driver assistance systems, vehicle dynamics control, motorcycles research, testing requirements and functional safety, brake system development, driving simulators.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Competently report and discuss about present and forward-looking technologies in the fields of chassis systems and components, driver assistance systems, motorcycles, functional safety, brake system development as well as driving simulators. 2. State current developments. 3. Evaluate possibilities and limitations of distinct approaches.
3	**Recommended prerequisites for participation** Advanced knowledge of automotive engineering as e.g. provided in "Ride and Handling" or "Automotive Mechatronics and Assistance Systems"
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS) Written exam 90 min or oral exam 30 min.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)

Module name Optical Technologies in Car Lighting					
Module nr. 18-kh-2041	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Tran Quoc Khanh		

1	**Teaching content** History and standardisation of car lithing. Description of the oused lighting sources and the function of these(lowbeam, highbeam, bending light, stop lamp, daytime running light...), visuell perception, glare, detection, traffic infrastructure, traffic elements, interior lighting, driver assistance systems(GPS, Radar, Lidar...), methods of psychophysics, lighting application concepts in future automated vehicles. Voluntary trip planed to an automobile manufacturer
2	**Learning objectives** Upon completion of the module, students will have learned to describe the basics and deepening knowledge of car lighting, to understand the light distribution of head and rear lamps, to learn the basics of standardisation, enlarge glare and detection skills, know the traffic elements, as well as the driver assistance systems.
3	**Recommended prerequisites for participation** Lighting technology 1
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc WI-ETiT, MSc iST, MSc MEC, MSc MPE, MSc Physik
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture slides, Automotive Lighting and Human Vision, Handbuch Fahrassistenzsysteme

Module name Avionics System Safety					
Module nr. 16-23-5110	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Uwe Klingauf		

1	**Teaching content** Operational requirements for flight guidance systems, structure of flight guidance systems, architectures and design of safe systems, pilot assistance systems in the cockpit, human factors.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Describe the basics of automated flight operations and human-machine interfaces in modern aircraft flight decks. 2. Explain the basic concepts and methods in the design of safety critical systems in flight control. 3. Differentiate between the different system architecture concepts. 4. Describe and discuss the complex interplay of technical systems, operational processes and humans using the example of avionics systems.
3	**Recommended prerequisites for participation** Recommended: Flight Mechanics I: Performance, Fundamentals of Navigation I, Systemic Evaluation of Air Transportation
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS) Written exam 60 min or oral exam 20 min
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** WPB Master MB II (Kernlehrveranstaltung aus dem Maschinenbau) Master AE II Kernlehrveranstaltung WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik)

Courses

Course Nr.	Course name		
16-23-5110-vl	Avionics System Safety		
Instructor		**Type** Lecture	**SWS** 2

Module name Combustion Engines I					
Module nr. 16-03-5010	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr. techn. Christian Beidl		

1	**Teaching content** Introduction: Historic review, economic and ecological aspects, classification of engines. Fundamentals of the thermodynamic process: Carnot cycle, constant-volume cycle, constant-pressure cycle, Seiliger cycle. Fundamentals of engine construction: Crank shaft, con-rod, bearing, piston, piston rings, piston pin, liner, cylinder head gasket, cylinder head, charge cycle. Parameters: Mean pressure, power, torque, fuel consumption, efficiency, cylinder charge, air fuel ratio, kinematics of the crank mechanism, compression ratio, characteristic diagrams, main dimensions. Fuel: Chemical configuration, characteristics, heat value, characteristics of ignition, production, alternative fuels. Basics of carburation: Spark-ignition engines, diesel engines, spreading, conditioning. Carburation of spark-ignition engines: Carburator, electronic fuel injection, HCCI (Homogeneous Charge Compression Ignition). Ignition of spark-ignition engines: Requirements, spark plug, ignition systems, magnetic systems, knock control systems.Mixture formation of diesel engines: basics, classification of different methods, mixture distribution and mixture formation, injection systems.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Explain the principles and the construction of combustion engines (ranging from small two-stroke models to the marine diesel engine). 2. Explain the physical principles of combustion engines. 3. Develop the essential parameters and apply these to characterise engines. 4. Explain the economic and ecological relevance of combustion engines. 5. Apply the thermodynamic basics of combustion engines to develop new drive concepts. 6. Describe the basics of the engine construction. 7. Analyse and evaluate the interdependency of fuel, mixture formation, and combustion. 8. Explain the difference by mixture formation and ignition process of spark ignited engines and diesel engines. 9. Explain the ignition and ignition systems of the spark ignited engine.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Technical examination, Default RS) Written or oral exam [written: 90 min; oral: 90 min (per group with 4 people 22,5 min per participiant). Will be announced at the beginning of the term depending on the circumstances (number of students, pandemic etc.).
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Technical examination, Weighting: 100 %)
7	**Usability of the module**

	WP Bachelor MB Bachelor Mechatronik			
8	**Grade bonus compliant to §25 (2)**			
9	**References** VKM I - script, available at the secretariat

Module name Technical Mechanics for Electrical Engineering					
Module nr. 16-26-6400	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Dr.-Ing. Nicklas Norrick		

1	**Teaching content** Statics: force, moment (torque), free body diagram, equilibrium equations, center of gravity, truss, beams, adhesion and friction. Mechanics of elastic bodies: stress and deformation, tension, torsion, bending. Kinematics: point and rigid body movement. Kinetics: dynamic force and moment equilibrium equations, energy and work, linear oscillators, momentum and angular momentum conservation laws, impact.
2	**Learning objectives** In this course the students will learn the basic concepts of technical mechanics. They should be able to analyze the statics of simple statically determinate planar systems, to carry out elementary elastomechanical calculations of statically determinate and statically indeterminate structures, to describe and analyze movements, and to solve planar motion problems, oscillation and shock phenomena with the laws of kinetics.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module**

Language German			**Module owner** Prof. Dr.-Ing. Steven Peters		

1	**Teaching content** Layout and function of vehicle components (e.g. engine, transmission, chassis, tires, breaks, steering); driving resistance & performance; safety; aerodynamics and automotive computing.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Calculate the factors that influence fuel consumption and discuss the strategies to reduce fuel consumption. 2. Derive upper bounds for combustion engine efficiencies and discuss the future opportunities & challenges of electromobility. 3. Explain the basic requirements, working principles, and basic structure of the drivetrain, powertrain, and chassis assemblies (including tires, wheels, brakes, steering, springs, dampers and axles). 4. Name and explain the methods to increase safety in individual traffic. 5. Explain the effects of aerodynamic measures on driving dynamics and fuel consumption.
3	**Recommended prerequisites for participation** Basic knowledge of technical mechanics (force diagram, equations of motion) and basic knowledge of thermodynamics recommended.
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the examination

Laboratory Control Engineering I

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-ko-1020	4 CP	120 h	60 h	1 Term	Summer term

Language	Module owner
German	Prof. Dr.-Ing. Ulrich Konigorski

1 Teaching content

- Control of a 2-tank system.
- Control of pneumatic and hydraulic servo-drives.
- Control of a 3 mass oscillator.
- Position control of a MagLev system.
- Control of a discrete transport process with electro-pneumatic components.
- Microcontroller-based control of an electrically driven throttle valve.
- Identification of a 3 mass oscillator.
- Process control using PLC.

2 Learning objectives
After this lab tutorial the students will be able to practically apply the modelling and design techniques for different dynamic systems presented in the lecture ”System dynamics and control systems I” to real lab experiments and to bring them into operation at the lap setup.

3 Recommended prerequisites for participation
System Dynamics and Control Systems I

4 Form of examination
Module exam:

- Module exam (Study achievement, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

- Module exam (Study achievement, Examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT

8 Grade bonus compliant to §25 (2)

Module name Laboratory Matlab/Simulink I					
Module nr. 18-ko-1030	**Credit points** 3 CP	**Workload** 90 h	**Self study** 45 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1	**Teaching content** In this lab tutorial, an introduction to the software tool MatLab/Simulink will be given. The lab is split into two parts. First the fundamentals of programming in Matlab are introduced and their application to different problems is trained. In addition, an introduction to the Control System Toolbox will be given. In the second part, the knowledge gained in the first part is applied to solve a control engineering specific problem with the software tools.
2	**Learning objectives** Fundamentals in the handling of Matlab/Simulink and the application to control engineering tasks.
3	**Recommended prerequisites for participation** The lab should be attended in parallel or after the lecture “System Dynamics and Control Systems I”
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT; BSc MEC
8	**Grade bonus compliant to §25 (2)** In case of E-Learning: Possibility to improve the grade up to 1,0
9	**References** • Lecture notes for the lab tutorial can be obtained at the secretariat • Lunze; Regelungstechnik I • Dorp; Bishop: Moderne Regelungssysteme • Moler: Numerical Computing with MATLAB

Courses

Instructor M.Sc. Alexander Steinke, Prof. Dr.-Ing. Ulrich Konigorski		**Type** Internship	**SWS** 3

Module name Project seminar Applications of Lighting Engineering					
Module nr. 18-kh-2051	**Credit points** 5 CP	**Workload** 150 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Tran Quoc Khanh		

1	**Teaching content** The project seminar deals with the following subjects: automotive lighting, interior lighting, exterior lighting; generation, perception and cognition of the visual stimulus (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement; illuminating engineering, color perception.
2	**Learning objectives** The objective of this project seminar is the practice oriented implementation of the material learned during the lectures in form of a project work. Via communication of the interdisciplinary way of thinking of the lighting engineer, students should carry out autonomous project work on their own or in a team.
3	**Recommended prerequisites for participation** Lighting Technology I-II (desireable)
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc iST, MSc WI-ETiT, MSc MEC, MSc MPE, MSc Phys
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture notes of Lighting Technology I (Khanh); Lecture slides of our Laboratory; Book “LED Lighting: Technology and Perception” (Khanh et al., Wiley); Book „Farbwiedergabe“ (Khanh et al., Pflaum-Verlag); specific literature depending on the topic, publications.

Courses

Course Nr. 18-kh-2051-pj	**Course name** Project seminar Applications of Lighting Engineering	
Instructor Prof. Dr.-Ing. Tran Quoc Khanh	**Type** Project seminar	**SWS** 3

Module name
Project seminar Advanced Applications of Lighting Engineering

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-kh-2052	5 CP	150 h	105 h	1 Term	Every Semester

Language	Module owner
German	Prof. Dr.-Ing. Tran Quoc Khanh

1 Teaching content

For the project seminar a question from the following topics can be worked on: automotive lighting, light for the autonomous car, interior lighting, exterior lighting; smart lighting, human centric lighting (hcl); horticultural lighting; generation, perception and cognition of the visual stimulus (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement; illuminating engineering, color perception, virtual reality tests for light-simulation.

2 Learning objectives

The objective of this project seminar is the practical implementation of the knowledge acquired during the study in the form of a project work. Students participate on their own or in a team. In this project seminar, students learn to plan, implement and validate lighting issues. The basics of the lecture and the project seminar 'Applications of Lighting Engineering' are applied and deepened. This usually includes the selection of suitable illuminants, the development of electronic hardware as well as the use of photometric measuring instruments. In addition, the students learn how to abstract questions, communicate project-dependent information as well as present and discuss results.

3 Recommended prerequisites for participation

Lighting Technology I-II (desireable), Project seminar Applications of Lighting Engineering

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)

To conclude the project, every student has to hold a presentation with a short round of questions and answers and also to deliver a written report about the work and the results.
The presentation with exam and the report will be graded according to the fixed guidelines of our Laboratory.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

9 References

Lecture notes of Lighting Technology I (Khanh); Lecture slides of our Laboratory; Book "LED Lighting: Technology and Perception" (Khanh et al., Wiley); Book „Farbwiedergabe" (Khanh et al., Pflaum-Verlag); specific literature depending on the topic, publications.

Courses

Course Nr.	Course name		
18-kh-2052-pj	Project seminar Advanced Applications of Lighting Engineering		
Instructor		**Type**	**SWS**
Prof. Dr.-Ing. Tran Quoc Khanh		Project seminar	3

Module name Project seminar Special Applications of Lighting Engineering					
Module nr. 18-kh-2053	**Credit points** 8 CP	**Workload** 240 h	**Self study** 195 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Tran Quoc Khanh		

1	**Teaching content** For the project seminar a question from the following subject areas can be worked on: Automotive lighting, light for autonomous cars, interior lighting, exterior lighting; smart lighting; human centric lighting (HCL); horticulture lighting; generation, perception and cognition of visual stimuli (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement; illuminating engineering, color perception, virtual reality tests for light-simulation.
2	**Learning objectives** The objective of this project seminar is the practical implementation of the knowledge acquired during the study in the form of research or project work in an interdisciplinary context, which also takes up topics beyond the lectures. Students participate on their own or in a team. In this project seminar, the students learn the approach, implementation and validation or investigation of inter-disciplinary lighting issues. This requires an introduction into topics that go beyond the subject area of the lectures. Usually, this includes the selection of suitable illuminants, the development of electronic hardware, the use of photometric measuring instruments as well as the conception, execution and evaluation of studies. In addition, students learn to abstract questions, to develop research questions, to com-municate information depending on the project, and to present and discuss results.
3	**Recommended prerequisites for participation** Lighting Technology I-II (desireable), Project seminar Applications of Lighting Engineering (recommended)
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral/written examination, Default RS) At the beginning of the project, a short introductory presentation has to be held followed by a technical discussion. Each student involved in the project has to conclude the project with a presen-tation followed by a short question and answer session. Every student has to deliver a written re-port about the work and the results. The final presentation with exam and the report will be graded according to the fixed guidelines of the institute.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module**
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture notes of Lighting Technology I (Khanh); Lecture slides of our Laboratory; Book "LED Lighting: Technology and Perception" (Khanh et al., Wiley); Book „Farbwiedergabe" (Khanh et al., Pflaum-Verlag); specific literature depending on the topic, publications.

Module name Space Debris - Risks, Surveillance and Mitigation					
Module nr. 16-23-3164	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Dr. Ing. Holger Krag		

1	**Teaching content** This lecture will provide the scientific, technical and operational background in relation to the sources, surveillance and mitigation of space debris. This covers risk assessment aspects: source and sink terms, particle flux models, aerodynamics and aerothermal aspects during atmospheric re-entry and related on-ground risk assessments; all major aspects of space surveillance: ground-based radar and telescope systems, orbit determination methods (batch least square, Levenberg-Marquardt, Kalmanfilter), residuals, covariances, operational collision avoidance; As well as space debris mitigation aspects: long-term environment projection models, international guidelines, passivation methods, shielding concepts, methods for post mission disposal and verification of measures;
2	**Learning objectives** On successful completion of this module, students should be able to: 1. name the sources of space debris and describe the human-made particle environment and the consequences of particle impacts; 2. analyse and determine the risks to a space mission due the natural and human-made particle environment and limit this this risk by suitable technical measures; 3. determine the on-ground risk caused by the atmospheric re-entry of a space object; 4. lay-out a space mission according to applicable space debris mitigation guidelines and verify the resulting setup along with international standards; 5. perform the main tasks of flight dynamics in operations (orbit determination and manoeuvre-planning) and explain the operational processes in the context of collision avoidance; 6. Present the main technical aspects of space surveillance, lay-out the required sensor systems and apply the related computational methods;
3	**Recommended prerequisites for participation** knowledge of the content of „Space Flight Mechanics” (module no. 16-25-5130) is an asset but not a pre-requisite.
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module**

Module name Tutorial Advanced Cax Methods					
Module nr. 16-07-5100	**Credit points** 4 CP	**Workload** 120 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. Reiner Anderl		

1	**Teaching content** Students gain knowledge of advanced CA Methods through the analysis of recent industrial examples. This course builds on the basic course 'Einführung in das rechnerunterstützte Konstruieren (CAD)'.
2	**Learning objectives** The students will be familiar with advanced CA Methods. They are able to recognise, execute and plan the generic workflow of CA Processes. Furthermore they are able to transfer their theoretical knowledge into industrial practice.
3	**Recommended prerequisites for participation** Einführung in das rechnergestützte Konstruieren (CAD) Virtuelle Produktentwicklung A, B, C
4	**Form of examination** Module exam: • Module exam (Technical examination, Technical examination, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Technical examination, Weighting: 100 %)
7	**Usability of the module**
8	**Grade bonus compliant to §25 (2)**

Module nr. 16-03-5020	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. techn. Christian Beidl		

1 Teaching content

- Electronic motor management: Configuration and structure, actuators and sensors, main functions, application, interfaces.
- Ignition and combustion of hydrocarbons: Kinetic gas theory, internal combustion, correlation between in-cylinder pressure and heat release, efficiency, basics of the combustion (SI-engine / diesel-engine), abnormal combustion, combustion chamber shape and combustion processes.
- Emissions: Components, corruptive effects, formation, influence of the operating point, internal motoric methods, aftertreatment, measuring systems, emission tests.
- Charge cycle: Influence of the charge cycle on engine characteristics, systems, camshaft drivetrains, parameters of the charge cycle, variable valve timing, special solutions.
- Charging: Characteristics and advantages of charging, different systems, design criterion for turbocharging, multi-stage charging, performed variants.
- Noise: Basics, sources, measures against noise, regulations
- Hybrid systems: Basics, functionalities, classification, components, challenges, research methods and certification, performed variants.
- Acquisition and analysis of engine indication: Measurement chain, measurement of pressure and cylinder capacity, analysis, calculation of heat release, characteristic resultsDesign of experiments.

2 Learning objectives

On successful completion of this module, students should be able to:

1. Explain the different internal combustion engines and describe theoretically the processes.
2. Design combustion chambers with the knowledge acquired on the connenction of combustion chamber shape, combustion processes, and ignition.
3. Define the emergence of emissions of engines (exhaust, noise) and describe the avoiding of emissions.
4. Describe the charge chaniging of a combustion engine, identify variants, and advance engines
5. Recognize the importance of charging and the variants.
6. Explain hybrid technology.
7. Reproduce specific measuring methods in the fields of optimizing engines (indication, design of experiments).

3 Recommended prerequisites for participation

None

4 Form of examination

Module exam:

- Module exam (Technical examination, Technical examination, Default RS)

oral or written (optional)
written exam 1 h 30 min;
oral exam: 1 h 30 min (per group of 4)

5 Prerequisite for the award of credit points

Passing the examination

6 Grading

	Module exam: • Module exam (Technical examination, Technical examination, Weighting: 100 %)
7	**Usability of the module** WPB Master MPE II (Kernlehrveranstaltungen aus dem Maschinenbau) Master Mechatronik
8	**Grade bonus compliant to §25 (2)**

Module name Automated Driving					
Module nr. 18-ad-2110	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

- History of Automated Driving
- Terminology and Paths towards Automated Driving
- Architectures, Building Blocks, and Components
- Perception & Environment Models
- Data Fusion & State Estimation
  - Deep Dive: Target Tracking & Traffic Participant Fusion
  - Deep Dive: Grid Fusion & Free Space Estimation
  - Deep Dive: Road Model Fusion
- Localization, Digital Maps, and Vehicle-To-X Communication
- Situation Understanding, Prediction, and Criticality Assessment
  - Deep Dive: Probabilistic Driving Maneuver Detection
- Behavior & Trajectory Planning, Decision Making
- Automated Driving Software Development & Test
- Open Challenges & State-of-the-Art Research Topics

2 Learning objectives

After visiting the lecture, the student

- is familiar with the history and terminology of automated driving systems,
- knows important architectures, building blocks, and components of automated vehicles,
- understands different perception, environment model, and data fusion approaches,
- has an idea about relevant methods (e.g. Bayesian Inference & Probabilistic Graphical Models, State Estimation, Deep Learning, Dempster-Shafer Theory) and knows how they can be beneficially applied in different of automated driving areas (e.g. detection, target tracking & traffic participant fusion, grid fusion, road model fusion, localization),
- is familiar with the challenges of situation understanding, prediction, and criticality assessment and knows exemplary methods to tackle the problem,
- is aware of exemplary behavior & trajectory planning approaches,
- knows best practices about automated driving software development & test (e.g. continuous integration, verification & validation, test-driven development, key performance indicators), and
- is familiar with open challenges and research topics.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc (WI-) etit, MSc MEC, MSc iCE, MSc CE

	18-ad-2110-vl	Automated Driving		
	Instructor		**Type**	**SWS**
	Dr.-Ing. Matthias Schreier		Lecture	2

2.2 Optional Subjects AIS-IA: Intelligent Systems and Algorithms

Module name Natural Language Processing and the Web					
Module nr. 20-00-0433	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** The Web contains more than 10 billion indexable web pages, which can be retrieved via keyword search queries. The lecture will present natural language processing (NLP) methods to automatically process large amounts of unstructured text from the web and analyze the use of web data as a resource for other NLP tasks. Key topics: - Processing unstructured web content - NLP basics: tokenization, part-of-speech tagging, stemming, lemmatization, chunking - UIMA: principles and applications - Web contents and their characteristics, incl. diverse genres such as personal web sites, news sites, blogs, forums, wikis - The web as a corpus - innovative use of the web as a very large, distributed, interlinked, growing, and multilingual corpus - NLP applications for the web - Introduction to information retrieval - Web information retrieval and natural language interfaces - Web-based question answering - Mining Web 2.0 sites such as Wikipedia, Wiktionary - Quality assessment of web contents - Multilingualism - Internet of services: service retrieval - Sentiment analysis and community mining - Paraphrases, synonyms, semantic relatedness
2	**Learning objectives** After attending this course, students are in a position to - understand and differentiate between methods and approaches for processing unstructured text, - reconstruct and explicate the principle of operation of web search engines, - construct and analyze exemplary NLP applications for web data, - analyze and evaluate the potential of using web contents to enhance NLP applications.
3	**Recommended prerequisites for participation** Basic knowledge in Algorithms and Data Structure Programming in Java
4	**Form of examination** Course related exam: • [20-00-0433-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading**

	Course related exam: • [20-00-0433-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Module name Web-Mining					
Module nr. 20-00-0101	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		
1	**Teaching content**				

	The World-Wide Web provides every internet uses access to an ever-growing plentitude of information, which can not be processed without appropriate support. Web Mining is the research area that is tries to solve this problem with machine learning and data mining techniques. In this course, we will discuss foundations of information retrieval and text classification, as well as consider the pecularities of web documents (i.e. their document and graph structure). - Introduction - Web Mining Overview - The Web, HTTP, HTML, DOM, XPath - Data Mining Overview - Structured, Semi-Structured and Unstructured Data - Sample Web Mining Tasks - Information Retrieval on the Web - search engines & web crawlers - document indexing - the vector space model - inverted index - performance measures (recall & precision) - relevance feedback - estimating the size of the web - Text Mining - text classification - document representation - induction of classifiers (k-NN, Naive Bayes, SVMs, Rule Learners) - Overfitting Avoidance - Evaluation of Classifiers - Multi-Label Classification - feature engineering - stop words - feature subset selection - n-grams - stemming - phrases - latent semantic indexing - semi- and unsupervised learning - clustering (k-means, bottom-up agglomerative) - semi-supervised learning (active learning, self-training, co-training) - Structure mining - the Web as a graph - hyperlink-based relevance ranking (hubs and authorities, page rank) - hypertext classification (Naive Method, HyperClass, hyperlink ensembles) - Information Extraction & Wrapper Induction - conventional information extraction (AutoSlog) - structured text (LR-Wrappers) - semi-structured text (SoftMealy, WHISK, SRV, RAPIER) - Web Usage Mining - recommender systems - memory-based collaborative filtering - model-based collaborative filtering - web log mining
2	**Learning objectives**

	After attending this course, students are in a position to - understand and explain fundemental techniques of information retrieval and web mining - apply practical information retrieval and web mining systems and understand their strengths and limitations - critically judge new developments in this area
3	**Recommended prerequisites for participation**
4	**Form of examination** Course related exam: • [20-00-0101-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0101-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Courses

Course Nr. 20-00-0189-pr	**Course name** Practical Lab Algorithms		
Instructor		**Type** Internship	**SWS** 4

Module name Practical Course in Artificial Intelligence					
Module nr. 20-00-0412	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** Students have to work on a concrete practical problem in the area of artificial intelligence and solve it with the help of tools and techniques that they developed on their own or that are already publicly available. Note the announcements on the homepage of the KE group regarding this course (http://www.ke.informatik.tu-darmstadt.de/lehre/)! In semesters, where this course is not announced on the above pages, there is often the possibility of individual projects (please ask).
2	**Learning objectives** After completion of this practical course, students should be able to - recognize potential uses of artificial intelligence tools - select appropriate tools for a given task and apply them to this task - evaluate and measure the success of the use of such tools
3	**Recommended prerequisites for participation** Basic knowledge in artificial intelligence
4	**Form of examination** Course related exam: • [20-00-0412-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0412-pr] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.

1 Teaching content

With the rapid development of information technology bigger and bigger amounts of data are available. These often contain implicit knowledge, which, if it were known, could have significant commercial or scientific value. Data Mining is a research area that is concerned with the search for potentially useful knowledge in large data sets, and machine learning is one of the key techniques in this area.

This course offers an introduction into the area of machine learning from the angle of data mining. Different techniques from various paradigms of machine learning will be introduced with exemplary applications. To operationalize this knowledge, a practical part of the course is concerned with the use of data mining tools in applications.

- Introduction (Foundation, Learning problems, Concepts, Examples, Representation)
- Rule Learning
- Learning of indivicual rules (generalization vs. specialization, structured hypothesis spaces, version spaces)
- Learning of rule sets (covering strategy, evaluation measures for rules, pruning, multi-class problems)
- Evaluation and cost-sensitive Learning (Accuracy, X-Val, ROC Curves, Cost-Sensitive Learning)
- Instance-Based Learning (kNN, IBL, NEAR, RISE)
- Decision Tree Learning (ID3, C4.5, etc.)
- Ensemble Methods (Bias/Variance, Bagging, Randomization, Boosting, Stacking, ECOCs)
- Pre-Processing (Feature Subset Selection, Discretization, Sampling, Data Cleaning)
- Clustering and Learning of Association Rules (Apriori)"

2 Learning objectives

After a successful completion of this course, students are in a position to
- understand and explain fundemental techniques of data mining and machine learning
- apply practical data mining systems and understand their strengths and limitations
- critically judge new developments in this area

3 Recommended prerequisites for participation

4 Form of examination

Course related exam:
- [20-00-0052-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:
- [20-00-0052-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

	"B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Kann im Rahmen fachübergreifender Angebote auch in anderen Studiengängen verwendet werden."
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Courses

	Course Nr.	**Course name**		
	20-00-0052-iv	Machine Learning and Data Mining		
	Instructor		**Type** Integrated course	**SWS** 4

Module name Seminar Data Mining and Machine Learning					
Module nr. 20-00-0102	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1	**Teaching content** This seminar serves the purpose of discussing new research papers in the areas of data mining and machine learning. Every participant will present one paper, which will be subsequently discussed by all participants. Grades are based on the preparation and presentation of the paper, as well as the participation in the discussion, in some cases also a written report. The papers will typically recent publications in relevant journals such as “Data Mining and Knowledge Discovery”, ""Machine Learning"", as well as ""Journal of Machine Learning Research"". Students may also propose their own topics if they fit the theme of the seminar. Please note current announcements to this course at http://www.ke.informatik.tu-darmstadt.de/lehre.
2	**Learning objectives** After this seminar, students should be able to - understand an unknown text in the area of machine learning - work out a presentation for an audience proficient in this field - make useful contributions in a scientific discussion in the area of machine learning
3	**Recommended prerequisites for participation** Basic knowledge in Machine Learning and Data Mining
4	**Form of examination** Course related exam: • [20-00-0102-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0102-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

Courses

Course Nr.	**Course name**		
20-00-0358-iv	Statistical Machine Learning		
Instructor		**Type**	**SWS**
Prof. Dr. rer. nat. Kristian Kersting		Integrated course	4

Module name Deep Learning for Natural Language Processing					
Module nr. 20-00-0947	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. phil. Iryna Gurevych		

1	**Teaching content** The lecture provides an introduction to the foundational concepts of deep learning and their application to problems in the area of natural language processing (NLP) Main content: - foundations of deep learning (e.g. feed-forward networks, hidden layers, backpropagation, activation functions, loss functions) - word embeddings: theory, different approaches and models, application as features for machine learning - different architectures of neuronal networks (e.g. recurrent NN, recursive NN, convolutional NN) and their application for groups of NLP problems such as document classification (e.g. spam detection), sequence labeling (e.g. POS-tagging, Named Entity Recognition) and more complex structure prediction (e.g. Chunking, Parsing, Semantic Role Labeling)
2	**Learning objectives** After completion of the lecture, the students are able to - explain the basic concepts of neural networks and deep learning. - explain the concept of word embeddings, train word embeddings and use them for solving NLP problems. - understand and describe neural network architectures that are used to tackle classical NLP problems such as classification, sequence prediction, structure prediction. - implement neural networks for NLP problems using existing libraries in Python.
3	**Recommended prerequisites for participation** Basic knowledge of mathematics and programming
4	**Form of examination** Course related exam: • [20-00-0947-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0947-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Instructor Prof. Dr. phil. Iryna Gurevych	**Type** Integrated course	**SWS** 4

Module name Project Lab Deep Learning in Computer Vision					
Module nr. 20-00-0980	**Credit points** 9 CP	**Workload** 270 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1	**Teaching content** In this project lab groups of students will work on selected topics in deep learning (deep neural networks) for problems in computer vision. This includes the practical implementation with modern deep learning frameworks. Results will be presented in a talk at the end of the lab. Concrete topics follow the current state of the art and change from term to term.
2	**Learning objectives** Through their successful participation, students acquire in-depth knowledge on deep neural networks and their applications in computer vision. They are able to analyze, modify, and apply state-of-the-art techniques in this area. Moreover, they practice their abilities for presenting their results and for collaboration in teams.
3	**Recommended prerequisites for participation** * Solid programming skills in C/C++ or Python or Lua * Prior or concurrent registration for "Computer Vision I"
4	**Form of examination** Course related exam: • [20-00-0980-pp] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0980-pp] (Study achievement, Oral/written examination, Weighting: 100 %)

Courses

	Course Nr. 20-00-0980-pp	**Course name** Project Lab Deep Learning in Computer Vision		
	Instructor Prof. Dr.-Ing. Michael Gösele		**Type** Internship	**SWS** 6

Module name Learning and Educational Technologies					
Module nr. 20-00-0773	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Eberhard Mühlhäuser		

1	**Teaching content** Digital applications and the Internet are changing the way we learn. If digital teaching and learning applications are designed appropriately, they offer a wide range of possibilities. The module aims to impart basic knowledge about the most important aspects of system design and about technologies needed for modern, web-based and mobile learning applications. Important theoretical foundations for the design of learning applications are learning theories. Therefore, learning theories are briefly discussed in the context of this module. The focus of the module is on adaptive learning applications. Different methods for the realization of adaptive learning applications will be presented. Frequently, Natural Language Processing and Artificial Intelligence methods are used for this purpose. In this context, current research work is considered. The module also focuses on the design of learning applications for individual and cooperative learning in various fields of application (e.g. school, university, vocational education and lifelong learning). Examples from current research projects as well as teaching/learning practice are presented. In addition, methods for the evaluation of learning applications are considered.
2	**Learning objectives** After completion of the module, students will be able to analyze and design applications for knowledge acquisition and learning based on different design patterns and technologies. They will be able to decide on information representation (data level), design of functionalities (application level), and selection/configuration of algorithms to support platform users concerning challenges in the learning process. Students are capable to consider techniques of adaptation to learners needs and will know appropriate evaluation methods to measure the qualities and effects of learning applications and the algorithms and methods used in the learning applications.
3	**Recommended prerequisites for participation** Basic knowledge of Machine Learning and Natural Language Processing is desirable but not a prerequisite. For students who do not meet these requirements, we offer short learning modules that allow an understanding of the application-specific mechanisms.
4	**Form of examination** Course related exam: • [20-00-0773-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0773-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik Kann in anderen Studiengängen verwendet werden.

Courses

Course Nr. 20-00-0276-pr	**Course name** Advanced Algorithms		
Instructor		**Type** Internship	**SWS** 4

Module name Fuzzy Logic, Neural Networks and Evolutionary Algorithms					
Module nr. 18-ad-2020	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1	**Teaching content** Fuzzy systems: basics, rule based fuzzy logic, design methods, decision making, fuzzy control, pattern recognition, diagnosis; Neural networks: basics, multilayer perceptrons, radial basis functions, pattern recognition, identification, control, interpolation and approximation, Neuro-fuzzy: optimization of fuzzy systems, data driven rule generation; Evolutionary algorithms: optimization problems, evolutionary strategies and their applications, genetic programming and its applications
2	**Learning objectives** After attending the module, a student is capable of: • recalling the elements and set-up of standardized fuzzy-logic, neural networks and evolutionary algorithms, • discussing the pros and cons of certain set- ups of systems from computational intelligence for solving a given problem, • recognizing situations in which tools taken from computational intelligence can be applied for problem solving, • creating programs from algorithms taught in the lecture, and • extending the learned standard procedures in order to solve new problems.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** BSc iST, MSc ETiT, MSc MEC, MSc WI-ETiT, MSc iCE, MSc EPE, MSc CE, MSc Informatik
8	**Grade bonus compliant to §25 (2)**

Module name Concepts and Technologies for Distributed Systems and Big Data Processing					
Module nr. 20-00-0951	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Dr.-Ing. Michael Eichberg		

1	**Teaching content** The course provides an overview of recent advances in distributed systems for Big Data processing. The course starts presenting computational models for high throughput batch processing like MapReduce. Next, we will introduce software engineering techniques for distributed systems such as REST and component-based architectures. We will then cover low latency real time stream processing and complex event processing. Finally, we will present advanced topics in distributed data-intensive systems, such as geodistribution and security. The course focuses both on the fundamental concepts as well as on the concrete technologies and applications of the aforementioned techniques to real-world case studies.
2	**Learning objectives** - The students are familiar with basic concepts and technologies on distributed systems and big data and are able to implement basic cloud based/distributed applications. - The students are familiar with the fundamental computational models behind recent advances in distributed systems, such as models for batch processing of massive data amounts, stream processing and complex event processing. - The students are familiar with selected advanced topics on big data, including security and geolocalization. - The students know about real-world case studies that apply the concepts and the technologies presented during the course.
3	**Recommended prerequisites for participation** This course is targeted at master students.
4	**Form of examination** Course related exam: • [20-00-0951-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Courses

Course Nr. 20-00-0951-iv	**Course name** Concepts and Technologies for Distributed Systems and Big Data Processing		
Instructor Dr.-Ing. Michael Eichberg		**Type** Integrated course	**SWS** 2

Module name Foundations of Language Technology					
Module nr. 20-00-0546	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. techn. Johannes Fürnkranz		

1 Teaching content

This lecture provides an introduction into the fundamental perspectives, problems, methods, and techniques of text technology and natural language processing using the example of the Python programming language.

Key topics:

- Natural language processing (NLP)
- Tokenization
- Segmentation
- Part-of-speech tagging
- Corpora
- Statistical analysis
- Machine Learning
- Categorization and classification
- Information extraction
- Introduction to Python
- Data structures
- Structured programming
- Working with files
- Usage of libraries
- NLTK library

The course is based on the Python programming language together with an open-source library called the Natural Language Toolkit (NLTK). NLTK allows explorative and problem-solving learning of theoretical concepts without the requirement of extensive programming knowledge.

2 Learning objectives

After attending this course, students are in a position to
- define the fundamental terminology of the language technology field,
- specify and explain the central questions and challenges of this field,
- explicate and implement simple Python programs,
- transfer the learned techniques and methods to practical application scenarios of text understanding, as well as
- critically assess their merits and limitations.

3 Recommended prerequisites for participation

4 Form of examination

Course related exam:
- [20-00-0546-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:
- [20-00-0546-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Prof. Dr. rer. nat. Karsten Weihe		Integrated course	4

Module name Information Management					
Module nr. 20-00-0015	**Credit points** 5 CP	**Workload** 150 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. phil. nat. Marc Fischlin		
1	**Teaching content**				

	Information Management Concepts: Information systems concepts Information storage/retrieval, searching, browsing, navigational vs. declarative access Quality issues: consistency, scalability, availability, reliability Data Modeling: Conceptual data models (ER/UML structure diagr.) Conceptual design Operational models (relational model) Mapping from conceptual to operational model Relational Model: Operators Relational algebra Relational calculus Implications on query languages derived from RA and RC Design theory, normalization Query Languages SQL (in detail) QBE, Xpath, rdf (high level) Storage media RAID, SSDs Buffering, caching Implementation of relational operators: Implementation algorithms Cost functions Query optimization: Heuristic query optimization Cost based query optimization Transaction processing (concurrency control and recovery): Flat transactions Concurrency control, correctness criteria: serializability, recoverability, ACA, strictness Isolation levels Lock-based schedulers, 2PL Multiversion concurrency control Optimistic schedulers Logging Checkpointing Recovery/restart New trends in data management Main memory databases Column stores NoSQL
2	**Learning objectives**

	After successfully attending the course, students are familiar with the fundamental concepts of information management. They understand the techniques for realizing information management systems and can apply the models, algorithms and languages to independently use and (partially) implement information management systems that fulfill the given requirements. They are able to evaluate such systens in a number of quality metrics.
3	**Recommended prerequisites for participation** Recommended: Participation of lecture „Funktionale und Objektorientierte Programmierkonzepte“ and „Algorithmen und Datenstrukturen“, respective according knowledge.
4	**Form of examination** Course related exam: • [20-00-0015-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Ambient Intelligence					
Module nr. 20-00-0390	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** The course will provide an overview of a new vision for Human-Computer-Interaction (HCI) in which people are surrounded by intelligent and intuitive interfaces embedded in the everyday objects around them. In specific the course addresses the emergence of Ambient Mobility and the ubiquitous, pervasive information access, retrieval and display on mobile devices. It will focus on understanding enabling technologies and studying applications and experiments, and, to lesser extent, it will adress the sociocultural impact. Additional topics of the lecture include system architectures for distributed systems, context awareness and management, user models and their implications, sensing and interaction in smart environments. The lecture discusses recent topics and research projects in the domain of Ambient Intelligence.
2	**Learning objectives** After successfully attending the lecture, the students will be able to describe technology trends and research results in the domain of Ambient Intelligence. The most important concepts to create smart environments - intelligent networks and objects, technologies for mobile, augmented reality, ubiquitous and pervasive information spaces, nomadic communications, real-time communication and related middle ware, embedded systems, sensor networks and wearable computing - can be discussed and classified. After completing the practical part, students will be able to plan and realize the different project phases required to develop an Ambient-Intelligence solution.
3	**Recommended prerequisites for participation** Master-Students Participation in lecture “Visual Computing“ and „Multimodale Interaktion mit intelligenten Umgebungen“
4	**Form of examination** Course related exam: • [20-00-0390-iv] (Technical examination, Oral/written examination, Default RS)

1	**Teaching content** This seminar serves the purpose of discussing new research papers in the intersection of hardware/software-systems and machine learning. The seminar aims to elicit new connections amongst these fields and discusses important topics regarding systems questions machine learning including topics such as hardware accelerators for ML, distributed scalable ML systems, novel programming paradigms for ML, Automated ML approaches, as well as using ML for systems. Every participant will present one research paper, which will be subsequently discussed by all participants. In addition, summary papers will be written in groups and submitted to a peer review process. The papers will typically be recent publications in relevant research venues and journals. The seminar will be offered as a block seminar. Further information can be found at: http://binnig.name
2	**Learning objectives** After this seminar, the students should be able to - understand a new research contribution in the areas of the seminar - prepare a written report and present the results of such a paper in front of an audience - participate in a discussion in the areas of the seminar - to peer-review the results of other students
3	**Recommended prerequisites for participation** Basic knowledge in Machine Learning, Data Management, and Hardware-/Software-Systems.

1 Teaching content

- Review of machine learning background
- Deep Feedforward Networks
- Regularization for Deep Learning
- Optimization for Training Deep Models
- Convolutional Networks
- Sequence Modeling: Recurrent and Recursive Nets
- Linear Factor Models
- Autoencoders
- Representation Learning
- Structured Probabilistic Models for Deep Learning
- Monte Carlo Methods
- Approximate Inference
- Deep Generative Models
- Deep Reinforcement Learning
- Deep Learning in Vision
- Deep Learning in NLP

2 Learning objectives

This course provides students with the required advanced background on machine learning the knowledge to independently carry out research projects on the hot topic of deep learning, e.g. within the scope of a Bachelor's or Master's thesis. In particular, this class aims at providing the students with fundamental understanding of deep learning algorithms and the architecture of deep networks.

3 Recommended prerequisites for participation

20-00-0358-iv Statistical Machine Learning
20-00-0052-iv Data Mining and Machine Learning

4 Form of examination

Course related exam:

- [20-00-1034-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:

- [20-00-1034-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Course Nr. 20-00-0596-se	**Course name**		
Instructor Prof. Dr. phil. Iryna Gurevych		**Type** Seminar	**SWS** 2

Module name Matrix Analysis and Computations					
Module nr. 18-pe-2070	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Marius Pesavento		

1	**Teaching content** This graduate course is a foundation class on matrix analysis and computations, which are widely used in many different fields, e.g., machine learning, computer vision, systems and control, signal and image processing, communications, networks, optimization, and many more... Apart from the theory this course will also cover the design of efficient algorithm and it considers many different examples from the aforementioned fields including examples from social media and big data analysis, image processing and medical imaging, communication network optimization, and written text classification. Specific topics: (i) basic matrix concepts, subspace, norms, (ii) linear least squares (iii) eigendecomposition, singular value decomposition, positive semidenite matrices, (iv) linear system of equations, LU decomposition, Cholesky decomposition (v) pseudo-inverse, QR decomposition (vi) advanced tensor decomposition, advanced matrix calculus, compressive sensing, structured matrix factorization
2	**Learning objectives** Students will learn matrix analysis and computations at an advanced or research level.
3	**Recommended prerequisites for participation** Basic knowledge in linear algebra.
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Pass module final exam.
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module**
8	**Grade bonus compliant to §25 (2)**

Courses	

	Course Nr. 20-00-0391-se	**Course name** Algorithmic modelling for creating schedules		
	Instructor		**Type** Seminar	**SWS** 2

Module name Machine Learning and Deep Learning for Automation Systems					
Module nr. 18-ad-2100	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

- Concepts of machine learning
- Linear methods
- Support vector machines
- Trees and ensembles
- Training and assessment
- Unsupervised learning
- Neural networks and deep learning
- Convolutional neuronal networks (CNNs)
- CNN applications
- Recurrent neural networks (RNNs)

2 Learning objectives

Upon completion of the module, students will have a broad and practical view on the field of machine learning. First, the most relevant algorithm classes of supervised and unsupervised learning are discussed. After that, the course addresses deep neural networks, which enable many of today's applications in image and signal processing. The fundamental characteristics of all algorithms are compiled and demonstrated by programming examples. Students will be able to assess the methods and apply them to practical tasks.

3 Recommended prerequisites for participation

Fundamental knowledge in linear algebra and statistics
Preferred: Lecture “Fuzzy logic, neural networks and evolutionary algorithms”

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 7 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Module name Introduction to Scientific Computing with Python					
Module nr. 18-st-2070	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. rer. nat. Florian Steinke		

1 Teaching content

Scientific computing is introduced via six case studies. Exemplary engineering problems that are know from basic engineering courses are solved on a computer using fundamental methods from numerical mathematics. Opportunities and limitations of this approach are highlighted.

The required material on numerical mathematics is taught via preparatory scripts for each case study. During the practical exercises the methods are implemented in the current computing environment Python under the guidance of suitable teaching personnel.

The case studies cover the following numerical topics:

- Formulation and solution of systems of linear equations, sparse methods
- Integration of ordinary differential equations (ODE) and their analysis based on eigenvalues
- Mathematical optimization and automated differentiation
- Linear regression and approximation, first Machine Learning algorithms
- Discretization of simple partial differential equations (PDE)

2 Learning objectives

After completing the module, the students have learned to work on engineering problems with modern computer tools and to use important basic technologies of scientific computing in a targeted manner. In doing so, the students have been taught an algorithmic way of thinking and are able to assess the possibilities and limitations of computer-based computational methods.

3 Recommended prerequisites for participation

Etit 1 & 2, Mathe for etit 1-3

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)

The exact form of the examination will be announced at the beginning of the first course. Either a report of experimental descriptions and/or a presentation of experimental results will be prepared.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

Etit B.A./M.Sc. with all options, as well as CE, ICE, IST

8 Grade bonus compliant to §25 (2)

Courses

	Course Nr.	Course name		
	18-st-2070-pr	Introduction to Scientific Computing with Python		
	Instructor Prof. Dr.-Ing. Herbert De Gersem, Prof. Dr. rer. nat. Florian Steinke, Prof. Dr. rer. nat. Sebastian Schöps, Prof. Dr. rer. nat. Markus Meinert, Prof. Dr. techn. Heinz Köppl		**Type** Internship	**SWS** 2

Module name Fundamentals of Reinforcement Learning					
Module nr. 18-kl-2070	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Anja Klein		

1 Teaching content

- Review of Probability Theory
- Markov Property and Markov Decision Processes
- The Multi-Armed Bandit Problem vs. the Full Reinforcement Learning Problem
- Taxonomy of Multi-Armed Bandit Problems (e.g., Stochastic vs. Adversarial Rewards, Contextual MAB)
- Algorithms for Multi-Armed Bandit Problems (e.g., Upper Confidence Interval (UCB), Epsilon-Greedy, SoftMax, LinUCB) and their Application to Cyber-Physical Networking
- Fundamentals of Dynamic Programming and Bellman Equations
- Taxonomy of Approaches for the Full Reinforcement Learning Problem (e.g., Temporal-Difference Learning, Policy Gradient and Actor-Critic)
- Algorithms for the Full Reinforcement Learning Problem (e.g., Q-Learning, SARSA, Policy Gradient, Actor-Critic) and their Application to Cyber-Physical Networking
- Linear Function Approximation
- Non-linear Function Approximation

2 Learning objectives

The students are able to

- define the Markov property and identify the elements that constitute a Markov decision process. They will be able to use these concepts to model decision-making problems in Cyber-Physical Networking.
- determine the characteristics of the Multi-Armed Bandit (MAB) Problem and compare them to the characteristics of the Full Reinforcement Learning (RL) Problem.
- determine under which conditions the MAB or the full RL formulation should be used to solve decision-making problems.
- differentiate the main MAB strategies, e.g., Upper Confidence Interval (UCB), Epsilon-Greedy and Softmax.
- choose appropriate MAB strategies for the solution of MAB problems.
- formulate and solve Contextual-MAB problems.
- determine under which conditions Dynamic Programming can be used to solve decision-making problems.
- explain the difference between Dynamic Programming and RL methods.
- differentiate between Temporal-Difference, Policy Gradient and Actor-Critic RL techniques.
- identify the limitations of MAB and full RL problems.
- explain the need for generalization in MAB and full RL problems.
- choose appropriate approximation techniques and use them in combination with MAB and full RL strategies.
- apply algorithmic techniques to solve MAB and full RL problems and obtain valid solutions.
- judge the reasonableness and consistency of the obtained solutions.

3 Recommended prerequisites for participation

- Python or Matlab: basic knowledge
- Engineering mathematics and probability theory

4 Form of examination

	Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 60 Min., Default RS) The examination takes place in form of a written exam (duration: 60 minutes). If one can estimate that less than 21 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc (Wi-) etit, BSc/MSc iST, MSc iCE, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** • Richard S. Sutton and Andrew G. Barto, “Reinforcement Learning: An Introduction”, A Bradford Book, Cambridge, MA, USA, 2018. • Aleksandrs Slivkins, "Introduction to Multi-Armed Bandits", Foundations and Trends in Machine Learning, Vol. 12: No. 1-2, 2019.

1 Teaching content

Artificial Intelligence (AI) is concerned with algorithms for solving problems, whose solution is generally assumed to require intelligence. While research in the early days was oriented on results about human thinking, the field has since developed towards solutions that try to exploit the strengths of the computer. In the course of this lecture we will give a brief survey over key topics of this core discipline of computer science, with a particular focus on the topics search, planning, learning, and reasoning. Historical and philosophical foundations will also be considered.

- Foundations
- Introduction, History of AI (RN chapter 1)
- Intelligent Agents (RN chapter 2)
- Search
- Uninformed Search (RN chapters 3.1 - 3.4)
- Heuristic Search (RN chapters 3.5, 3.6)
- Local Search (RN chapter 4)
- Constraint Satisfaction Problems (RN chapter 6)
- Games: Adversarial Search (RN chapter 5)
- Planning
- Planning in State Space (RN chapter 10)
- Planning in Plan Space (RN chapter 11)
- Decisions under Uncertainty
- Uncertainty and Probabilities (RN chapter 13)
- Bayesian Networks (RN chapter 14)
- Decision Making (RN chapter 16)
- Machine Learning
- Neural Networks (RN chapters 18.1,18.2,18.7)
- Reinforcement Learning (RN chapter 21)
- Philosophical Foundations

2 Learning objectives

After a successful completion of this course, students are in a position to
- understand and explain fundemental techniques of artificial intelligence
- participate in a discussion about the possibility of an artificial intelligence with well-founded arguments
- critically judge new developments in this area

3 Recommended prerequisites for participation

4 Form of examination

Course related exam:
- [20-00-1058-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

2.3 Optional Subjects AIS-IE: Information Processing in Electrical Power Engineering

Module name Advanced Power Electronics					
Module nr. 18-gt-2010	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1	**Teaching content** Switch mode power supplies (insulating DC/DC-converters) Realistic behavior of power semiconductors: Basics of semiconductor physics; Behavior of diode, bipolar transistor, SCR, GTO, MOSDFET and IGBT, Important circuits for switching real semiconductors with low losses Forced commutation of SCRs, Loss reducing snubbers, quasi- resonant circuits, resonant switching. Topologies and control strategies for multilevel converter Thermal design and thermo mechanical aging of power electronics systems
2	**Learning objectives** After an active participation in the lecture, especially by asking all questions on topics which you did not fully understand as well by solving all exercises prior to the respective tutorial (i.e. not just shortly before the examination) you should be able to 1.) Explain und understand the cross sectional layers and the basic modes of operation for power semiconductors (diode, thyristor, GTO. Mosfet and IGBT). Describe the steady state and dynamic behavior of these devices. 2.) Identify the circuit diagrams for isolating DC/DC converters, especially for use in switched mode power supplies. Calculate the currents and voltages in these circuits using defined simplifications. 3.) Describe the functions of gate dive-circuits for ITGBTs. 4.) Calculate the thermal behavior and design the cooling equipment for a voltage source inverter equipped with IGBT modules. 5.) Describe the stress reliving circuits to reduce switching losses in IGBTs. 6.) Calculate the current and voltage characteristics in quasi-resonant and resonant circuits used in power electronics. 7.) Explain multilevel converters such as 3L-NPC and MMC 8.) Know the main concepts for cooling of power electronics incl. the ability to design a cooling concept and should know main aspects which influence lifetime
3	**Recommended prerequisites for participation** BSc ETiT or equivalent, especially Power Electronics and Basics of Semiconductors
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc EPE, Wi-ETiT
8	**Grade bonus compliant to §25 (2)**

Module name Real Time Applications and Communication with Microcontrollers and programmable Logic Devices					
Module nr. 18-gt-2040	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1 Teaching content

Microcontroller and programmable logic devices are being used for a variety of control tasks for industrial and residential products and systems. For the control of drives and power electronics, those devices are used for the control of frequency converters or DC/DC converters.
In most of these applications, real time requirements have to be met. Simultaneously a communication interface has to be served.
The module will impart knowledge and expertise on how to realize successfully control task.
More in detail, the following content will be taught:

- Architecture of microcontroller
- Structure and function of FPGAs, tools and programming languages
- Typical peripheral components for microcontrollers
- Capture & Compare, PWM, A/D-converter
- I2C, SPI, CAN, Ethernet
- Programming of microcontrollers in C
- Software: real-time properties, interrupt handling, interrupt latency
- Control of inductive components
- Basic of circuit design for power electronics, Power-MOSFETS, IGBTsNumerical methods

2 Learning objectives

Students will be able to:

- Separate a digital control task into HW and SW parts
- Specify the HW-content in a HW description language and implement the SW by means of a microcontroller
- Evaluate the real-time capabilities of a program and to determine upper limits for the response time of the systemTransfer the developed solution to the target system by means of a development kit and debug the software onto the target system.

3 Recommended prerequisites for participation

Basic knowledge in programmig language C (syntax, operators, pointer)

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

MSc MEC, MSc ETiT

8 Grade bonus compliant to §25 (2)

1	**Teaching content** This lecture covers the essential aspects of the operation and analysis of power systems. The following topics will be covered: • Operation of synchronous generators (steady-state operation, power chart, steady-state stability, transient stability, transient behavior) • Calculation of short-circuit currents (Decaying three-phase short-circuit currents) • Neutral grounding in MV- and HV-Systems (Systems with isolated neutrals, resonant grounding and solidly grounded neutrals) • Network Protection
2	**Learning objectives** At the end of the lecture, the student should have a profound understanding of synchronous generator behavior, decaying short-circuit currents and their calculation and a basic understandning of neutral point treatment and network protection. The different types of power system stability are known.
3	**Recommended prerequisites for participation** Knowledge comparable to "Energieversorgung I" or basic knowledge of power system equipment and calculations using symmetrical components.
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)

Language English			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1	**Teaching content** Design of cage-rotor and wound-rotor induction machines: Calculation of forces, torque, losses, efficiency, cooling and temperature rise. Transient machine performance of converter-fed dc machines and line-fed and inverter-fed ac machines. Theory is illustrated by examples: Sudden short circuit, load step, run up. For control design transfer functions of machines are derived. In the exercise lessons demonstration examples of power transformer and induction motor design are given. The students design one induction machine in small groups by themselves. Transient performance calculation is trained by using Laplace-Transformation and MATLAB.
2	**Learning objectives** With active collaboration during lectures by asking questions related to those parts, which have not been completely understood by you, as well as by independent solving of examples ahead of the tutorial (not as late as during preparation for examination) you should be able to: 1. do and explain the electromagnetic design of an induction machine both analytically and with use of computer program, 2. understand and predict the thermal performance of electrical drives in a simplified way, 3. calculate the instationary performance of separately excited DC drives 4. to predict the dynamical performance of AC polyphase machines with space vector theory and use the MATLAB/Simulink package for this purpose.
3	**Recommended prerequisites for participation** Bachelor of Science in Electrical Engineering, Power Engineering or similar
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc MEC, MSc EPE
8	**Grade bonus compliant to §25 (2)** Grade improvement is achieved by solving voluntary additional assignments due weekly in writing during the lecture period. The maximum grade improvement is 1.0 grade. Actual grade improvement is proportional to the percentage of additional assignments correctly completed. Grade improvement does not affect passing.

Module name Power Laboratory I					
Module nr. 18-bi-2091	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German/English			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1 Teaching content

Safety instructions for laboratory;
Topic of experiments:

- Electrical energy conversion
- Power electronics
- High voltage technology
- Electrical energy supply
- Renewable energies

2 Learning objectives

Practical knowledge is gained in measuring and operating electrical devices and apparatus of electrical power engineering in small groups of students.

3 Recommended prerequisites for participation

Power Engineering or similar

4 Form of examination

Module exam:

- Module exam (Study achievement, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC, MSc WI-ETiT

8 Grade bonus compliant to §25 (2)

Module name Application, Simulation and Control of Power Electronic Systems					
Module nr. 18-gt-2030	**Credit points** 8 CP	**Workload** 240 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1	**Teaching content** In an introductory meeting topics according to power electronics and control of drives are given to the students. During the seminary problems can be treated concerning the following topics: • Simulation of power electronic systems plus analysis and evaluation of the models • Implementing and startup of power electronic systems, test stand development plus measurement of characteristic parameters • Modeling and simulation in the field of control of electrical drives • Implementing and startup of controlled drive systems • Suggested topics from the students are welcome The students are working autonomous on the chosen problem. The results are documented in a written report and at the end of the module, a presentation about the problem must be held.
2	**Learning objectives** The Competences are: • Autonomous familiarization with a given problem • Selection and evaluation of appropriate development tools • Familiarization with the used development tools • Practical experience in power electronics and control of drives • Logical presentation of the results in a report • Presentation skills
3	**Recommended prerequisites for participation** Lecture „Leistungselektronik 1“ or „Einführung Energietechnik“ and ggf. „Regelungstechnik I“ or similar
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc Wi-ETiT, MSc MEC
8	**Grade bonus compliant to §25 (2)**

1	**Teaching content** The lecture reviews the different levels of energy management. It then focuses on economic dispatch and discusses its different use cases like optimization of self-consumption, virtual power plants, electric vehicle load management or multi-modal neighborhood optimization. Relevant knowledge about the components to be controlled as well as the markets to be addressed is explained. After this introduction to economic dispatch‘s application environment, the lecture focuses on the methods employed. The underlying mathematical formulations as different types of optimization problems (LP, MILP, QP, stochastic optimization) are reviewed. In parallel, a practical introduction to numerical optimization is given (descent algorithms, convergence, convexity, programming languages for the formulation of optimization problems). Moreover, an introduction into simple methods for the prognosis of future values (linear regression) is provided.All methodological learning is accompanied by hands-on exercises using the Matlab/Octave and the GAMS/AMPL software environments.
2	**Learning objectives** Students know the different use cases and formulations of economic dispatch. They have a basic understanding of the typically employed optimization methods and are able to judge the quality of the achieved results. Moreover, students are independently able to formulate (energy) optimization problems and solve them with the tool GAMS/AMPL.
3	**Recommended prerequisites for participation** Standard knowledge of linear algebra and multivariate analysis as well as basic knowledge in the use of Matlab/Octave is required. Knowledge of the modules „Kraftwerke & EE“ or „Energiewirtschaft“ is helpful but not necessarry.
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc iST, MSc Wi-ETiT, MSc CE
8	**Grade bonus compliant to §25 (2)** Improvement of grades up to 0.4 compliant to APB 25(2) through bonus system for re-gular attention of exercises and practical courses

Module name Electromagnetic Compatibility					
Module nr. 18-hs-2160	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Jutta Hanson		

1	**Teaching content** Fundamentals of Electromagnetic Compatibility, sources of emission, coupling mechanisms and counter measures, components for noise suppression, electromagnetic shields, EMC measuring and test techniques, excursion to VDE Offenbach
2	**Learning objectives** The students know that from every electromagnetic system a interaction is possible and that every electromagnetic (and also biological) system can be effected; they can differ between typical interference sources and sinks; they know the typical coupling paths and can identify and describe them mathematically; they know the basic methods to avoid interference at the source side and can derive their own actions against interference from this basic understanding; they know the basic actions to avoid interference at the sink side and can also derive actions to avoid interference; they have the ability to recognize coupling paths and can systematically influence or interrupt them completely; they know the situation of the EMC standardization and know basically which requirements have to be fulfilled and how to do this (also i.e. how to give a device a CE-label); they have learned the most important EMC testing and measurement techniques theoretically and practically know on the field trip.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS) The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 20 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc MEC, MSc Wi-ETiT, MSc ESE, MSc CE
8	**Grade bonus compliant to §25 (2)**

Language German			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1 Teaching content

The lecture gives an introduction to the technical processes for the use of energy for the human civilization in general and to the basic tasks and challenges of the electrical energy in particular. Biochemical energy processes such as the human metabolism are therefore not subject of the course.
First, the physical basics of the term "energy" are repeated and the different forms of energy (mechanical, thermal, electromagnetic, chemical and nuclear) are explained in terms of the technical use of energy as heat, mechanical movement and electricity.
Then, an overview of the energy resources is given, starting from the solar radiation and its direct and indirect impact, such as the solar heat and the motion of air mass, surface water and sea waves. Next, the energy source of biomass due to solar radiation and the fossil energy sources oil, natural gas and coal will be discussed. The energy sources of nuclear fission (uranium deposits) and nuclear fusion (heavy water), and geothermal energy due to nuclear effects in the Earth's interior are explained as well as the tidal effects caused by planetary motion. The increasing energy demand of the rapidly growing world population and the geographic distribution of energy sources (deposits, acreage, solar radiation, wind maps, tidal currents, ...) are described.
The resulting energy flows on transport routes such as pipelines, waterways, ..., are briefly presented. In another section, energy conversion processes (direct and indirect methods) are illustrated. Large-scale processes such as thermal cycles or hydraulic processes in power plants are discussed mainly, but also marginal processes such as thermionic converters are addressed. Afterwards, a specialization takes place on the subject of electric power supply with respect to the increasing proportion of the electric power applications. The chain from the electric generator to the consumer with an overview of the required resources, the hiring electrical load flow and its stability is addressed. The storage of energy and in particular of electrical energy by converting into other forms of energy will be discussed. Finally, questions for the contemporary use of energy resources in regard to sustainability are mentioned.

2 Learning objectives

Students know the physically based energy basics and have an overview of the energy resources of our planet Earth.
They understand the fundamental energy conversion processes on the technical use of energy in the form of heat as well as mechanical and electrical work.
They have acquired basic knowledge of electrical engineering in the chain of effects from electric power producer to the consumer and are able to educate themselves about current issues of energy use and its future development.
They are able to perform basic calculations for energy content, energy conversion, efficiencies, storage, and for conversion and transportation losses. They are prepared for advanced lectures on energy components and systems, energy industry, and on future forms of energy supply.

3 Recommended prerequisites for participation

Basic knowledge of physics (mechanics, thermodynamics, electrical engineering, structure of matter) and chemistry (binding energy) are desirable and facilitate understanding of the energetic processes.

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc WI-ETiT, BSc MEC, BSc iST, BSc CE, MSc ESE
8	**Grade bonus compliant to §25 (2)** At the beginning of the semester, it will be announced whether there will be homework tests accompanying the lecture that will enable an improvement in grades.

Module name High Voltage Measuring Techniques					
Module nr. 18-hi-2050	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Volker Hinrichsen		

1 Teaching content

1. Measurement of High DC Voltages

1.1 Resistor Voltage Dividers
1.2 Electrostatic Voltmeters
1.3 Generating Voltmeters
1.4 Rod/Rod Gaps
1.5 DKD-Calibration of a 1500 kV-DC-Measuring System

2. Measurement of High AC Voltages in High Voltage Transmission Systems

2.1 Inductive Voltage Transformers with Oil and with SF6-Insulation
2.2 Capacitor Voltage Transformers
2.3 Electronic Voltage Transformers
2.4 Electro-Optical Voltage Transformers
2.5 Calibration of Voltage Transformers

3. Measurement of High AC Voltages in the Laboratory

3.1 Resistor Voltage Dividers
3.2 Capacitor Voltage Dividers
3.3 Measuring Sphere Gap
3.4 Electronic Peak Voltmeter
3.5 DKD-Calibration of a 1200 kV AC-Measuring System

4. Measurement of High Impulse Voltages

4.1 Standard Impulse Voltages and their Normalized Amplitude Frequency Spectra
4.2 Designs of R- , C- and RC-Dividers
4.3 Computation of the Step Response of Impulse Voltage Dividers
4.4 Analytical Calculation of the Response Time of a Divider with a Lead
4.5 EMTP-Calculation of the Divider Output Voltage for Lightning Impulse Voltages
4.6 DKD-Calibration of a 3 MV Lightning Impulse Measuring System
4.7 DKD-Calibration of a 2 MV Switching Impulse Measuring System

2 Learning objectives

	The students learn the fundamentals, the dimensions, the application and the operation of voltage dividers up to 1,5 MV DC, 1,2 MV AC, 3,2 MV LI and 2 MV Si. They know and have understood the standards IEC 60060-2 High-Voltage Measuring systems and the Calibration Procedures of the German Calibration Service (DKD) for High-Voltage Measuring Systems which show that the uncertainty of the High-Voltage Measuring results of approved measuring systems are lower than the maximal permissible uncertainty for Type tests in an accredited High-Voltage Test Laboratory. They know, how the material of the resistors and the Isolationsystem influence the measuring uncertainty, the costs and the the level of the maximal DC Voltage. The students know and understand the equivalent circuits for power frequency of inductive and capacitive voltage transformer and are able to deduce the measuring errors and their dependency of the dimensioning of the magnetic and electric components. The students learn and understand, why an ohmic resistor voltage divider in contrary to a capacitor voltage divider is not applicable for the measurement of high AC voltages. They are able to calculate the influence of the distance between a wall and the capacitor voltage divider with oil-paper insulation on the measuring error. The students know, why capacitor voltage dividers without serious resistors are not applicable to the measurement of lightning impulse voltages. They can describe the advantages and the disadvantages of a low damped capacitor voltage divider as front capacitor of a lightning impulse voltage generator and as voltage divider. They know, why at LI-voltage measurements the test object must be situated between the generator and the divider. The students are able to reduce the interference of steep currents in the walls and in the ground of a high voltage test lab on the secondary voltage signal in the measuring cable from the divider to the recorder.
3	**Recommended prerequisites for participation** BSc ETiT, BSc Wi-ETiT
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc Wi-ETiT

1 Teaching content

- Introduction, basics and overview
- Determination of representative overvoltages
  - Origin and classification of overvoltages
  - Normal distribution of overvoltage probability and derivated variables
  - Operating voltage and temporary overvoltages
  - Slow front overvoltages
  - Fast front overvoltages
  - Characteristics of overvoltage protective devices
  - Operation and design of metal-oxide surge arresters
  - Travelling wave effect and protective distance of surge arresters
  - Representative voltage and overvoltages in the case of using surge arresters
- Determination of coordination withstand voltage
  - Insulation strength for different voltage shapes and geometric configurations (gap factors)
  - Performance criterion
  - Insulation coordination procedure
- Determination of required withstand voltage
  - General remarks
  - Atmospheric correction
  - Safety factor for internal and external insulations
- Standard withstand voltage and testing procedures
  - General remarks
  - Test conversion factors
  - Determination and verification of insulation withstand by type tests
  - Table of test voltages and required clearances

2 Learning objectives

The student have understood the main procedures of insulation coordination based on the relevant IEC standard (and the main difference with related IEEE standard procedure) which leads to selection of the electric strength of equipment in relation to the voltages which can appear on the system. In addition, they have learned the origin of different type of overvoltages as well as the protection of equipment against them. The operation and design of surge arresters as an important instrument of insulation coordination in power systems have been understood. The theoretical knowledge about the procedure of insulation coordination has been confirmed and expanded by practical case studies. The students are finally be able to carry out the insulation coordination independetly in any application.

3 Recommended prerequisites for participation

High Voltage Technology I and II

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)			
7	**Usability of the module** MSc ETiT, MSc EPE, MSc Wi-ETiT			
8	**Grade bonus compliant to §25 (2)**			
9	**References** The related IEC standard can be borrowed during the lecture time. Lecture notes (in English) and other helpful materials can be downloaded from HST homepage: www.hst.tu-darmstadt.de.

Module name Power Electronics					
Module nr. 18-gt-1010	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1	**Teaching content** Power electronic devices convert the energy from the distribution network to the form required by the load. This conversion does not wear out, can be controlled very fast and has a high efficiency. In lecture “Power Electronics“ the most important circuits required for the energy conversion are treated, using ideal switches. The main chapters are I.) Line commutated converters in order to understand the basic concepts of power electronic systems. II.) Self- commutated converters (one, two and four quadrant converters, 3-phase- VSI)
2	**Learning objectives** The module teaches students after successful completion: • Understand the ideal concept of power semiconductors • Calculate and sketch the time-characteristics of all currents and voltages in a line-commutated converter using defined simplifications as well as represent the behavior of currents and voltages during commutation in line-commutated converters for center -tapped as well as for bridge circuits. • Specify the basic circuit diagrams for one, two and four quadrant DC/DC converters and calculate the characteristics of voltages and currents in these circuits. • Explain the function of single-phase and three-phase voltage source inverters and calculate the currents and voltages in these circuits using defined simplifications. • Understannd the concept und operation of HVDC converter
3	**Recommended prerequisites for participation** Mathe I und II, ETiT I und II, Energietechnik
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc MEC, Wi-ETiT
8	**Grade bonus compliant to §25 (2)**

Module name High Voltage Switchgear and Substations					
Module nr. 18-hs-2120	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. Claus Neumann		

1 Teaching content

This lecture covers the basic designs of high voltage substations as well as the design and working principles of high voltage switchgear:

- Tyes of switching and stresses induced by switching
- Arc behaviour in air, SF6 and vacuum
- Types of switchgear: earthing switches, disconnectors and circuit breakers
- Design and working principles of earthing switches and disconnectors in air and SF6
- Design and working principles of circuit breakers: vacuum breakers, pressured air and SF6 breakers (thermal blast and self-blast chambers)
- Stresses of earthing switches and disconnectors by short circuit conditions
- Testing of Switchgear
- Reliability of Switchgear
- Future developments: Intelligent control of switchgear, static switches, superconducting switchgear

2 Learning objectives

The student should understand the purpose and working principles of high voltage switchgear as well as their usage in high voltage substations.

3 Recommended prerequisites for participation

Prior attendance of the lectures High Voltage Technology I and II is recommended

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral examination, Duration: 45 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, BSc/MSc iST, MSc Wi-ETiT, MSc EPE

8 Grade bonus compliant to §25 (2)

Course Nr.	**Course name**		
18-hs-2120-vl	High Voltage Switchgear and Substations		
Instructor		**Type**	**SWS**
Prof. Dr. Claus Neumann		Lecture	2

Module name High Voltage Technology I					
Module nr. 18-hs-1080	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Jutta Hanson		

1	**Teaching content** Choice of Voltage Level, Generation of High AC Voltage, Generation of High DC Voltage, Generation of Impulse Voltages, Measurement of High AC/DC/Impulse Voltages, Electrical Fields, Two excursions to manufacturers of high voltage products
2	**Learning objectives** The students know why electrical energy is transported and distributed at high voltages and what is the optimal voltage level for different purposes; they are able to identify different basic kinds of electrical stress in the system; they know how to generate and to measure high test voltages in the laboratory; they have understood the requirements in the test standards and why standards are so important at all; they are able to interpret and correctly apply the standards; they know the basic test circuits for generating alternating, direct and impulse voltages, and they can extend and adopt them for special purposes; they are aware of the particular problems of high-voltage measuring techniques and are able to apply high-voltage measuring systems and optimize them for particular tasks; thus, in sum they are basically prepared to plan, erect and operate a high-voltage test laboratory; they can analytically solve the electrical field equations for basic electrode configurations and make use of them for optimizing configurations with regard to dielectric strength; they know about surge propagation on lines and are aware that this is also relevant for impulse measuring techniques and how to handle related problems.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT

Module name High Voltage Technology II					
Module nr. 18-hs-2150	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Jutta Hanson		

1	**Teaching content** Layered Dielectrics, Methods of Field Control and Potential Control, Breakdown in Gases (air and SF6), Breakdown in Vacuum, Surface Discharges, Lightnings and Lightning Protection, Travelling Waves on Conductors; Excursion to a substation
2	**Learning objectives** The students are now able to optimize insulation systems also by choice of the dielectrics, by capacitive, refractive or resistive internal grading systems or by external geometrical/capacitive grading elements; they have understood why equipment is designed as it is and how and where it can or has to be optimized if requirements from service are changing; they have understood the physical phenomena behind the dielectric breakdown of gases and do know which are the main influencing parameters; they know the effect of strongly inhomogeneous electrode configurations and of extremely large gaps; they know the time dependencies of a dielectric breakdown and their impact on dielectric strength under impulse voltage stress; they are able to identify critical surface discharge configurations, know about the problems under severe external pollution of insulators and how to solve them; they are thus qualified to predict the dielectric strength of any electrode configuration under any kind of voltage stress and to design a particular required dielectric strength of equipment; they are particularly enabled to realize the demands of emerging UHV systems and to manage them; they have understood the mechanism of thunderstorms and lightning flashes and are able to derive protective measures for buildings, substations and overhead lines; they are skilled to calculate travelling wave effects and their effect on fast-front overvoltages and to develop adequate countermeasures.
3	**Recommended prerequisites for participation** High Voltage Technology I
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

Module name New Technologies of Electrical Energy Converters and Actuators					
Module nr. 18-bi-2040	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German/English			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1 Teaching content

Goal: The application of new technologies, i.e. super conduction, magnetic levitation techniques and magneto-hydrodynamic converter principles, are introduced to the students. The physical operation mode in principle, implemented prototypes and the current state of the development are described in detail.

Content:

Application of the superconductors for electrical energy converters:

- rotating electrical machines (motors and generators),
- solenoid coils for the fusion research,
- locomotive- and railway transformers,
- magnetic bearings.

Active magnetic bearings (“magnetic levitation”):

- basics of the magnetic levitation technique,
- magnetic bearings for high speed drives in kW to MW range,
- application for high-speed trains with linear drives.

Magneto-hydrodynamic energy conversion:

- physical principle,
- state of the art and perspectives.

Fusion research:

- magnetic field arrangements for contactless plasma inclusion,
- state of the current research.

2 Learning objectives

Basic knowledge in application of superconductivity in energy systems is understood as well as magnetic levitation, magnetohydrodynamics and fusion technology.

3 Recommended prerequisites for participation

Physics, Electrical Machines and Drives, Electrical Power Engineering

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

MSc EPE, MSc ETiT, MSc MEC, MSc WI-ETiT

8 Grade bonus compliant to §25 (2)

1	**Teaching content** The analysis and interpretation of data becomes ever more important, also for engineers. Digitalization and Smart Grids are terms to describe a host of novel data-based services in the field of generation, distribution, consumption, and marketing of (renewable) energy. The lecture presents the recent developments and their underlying machine learning methods. For a start we describe the different problem settings of machine learning methods, review recent developments in the field, and evaluate the impact of machine learning on the energy sector. After such an introductory overview, we review the basics of linear algebra and numerical optimization. We then introduce supervised learning problems and study different model classes to solve such problems (linear models, trees, random forests, nearest neighbor, kernel methods, deep learning). We then turn to a probabilistic view and study unsupervised learning problems. Finally, we give an introduction to probabilistic graphical models. Throughout the semester we discuss exemplary applications of machine learning in the energy domain (e.g. renewable forecasting, predictive maintenance, state estimation, probabilistic load flow). Practical exercises with Python deepen the understanding and support students' actively usable skills.
2	**Learning objectives** Students understand important machine learning problem settings andsome key methods for each task. They know common applications thereof in the energy domain. Moreover, the students are able to apply and adapt those methods independently to new applications (not only from the energy domain).
3	**Recommended prerequisites for participation** • Good knowledge of linear algebra required • Basic knowledge of statistics and numerical optimization will be helpful • Using Python for programming the practical examples should pose no difficulty
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS) The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 8 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc etit, MSc iST, MSc Wi-etit, MSc CE
8	**Grade bonus compliant to §25 (2)** Grade improvements up to 0.4 according to APB 25(2) through bonus for regularly attended practice/internship appointments and independent work on a case study.

1	**Teaching content** • Basics of electric machine theory • lassification of electric machine types • Basic principles of electric machine modelling and simulation • Embedding material models • Geometry approximation and field modelling • Field-circuit coupling and transient simulation • Finite elements for multiphysics • Optimization methods • Simulation environments • Laboratory measurements on electric machines
2	**Learning objectives** The students get acquainted with modern techniques for modelling, simulating and optimizing electric machines. They know the strengths and weaknesses of available design tools and are able to critically assess simulation results. They consider electromagnetic fields and their coupling to structural, thermo- and fluiddynamics. They are able to specify the virtual prototyping problem, choose the appropriate simulation tools, set up the models, and eventually solve the problems, including application of modern optimization techniques.
3	**Recommended prerequisites for participation** Basics of field and circuit simulation, electromagnetic field theory, basics of partial differential equations and linear algebra.
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Default RS) The grade consists of a report and a presentation followed by a question and answer session.
5	**Prerequisite for the award of credit points** Passing the final module examination

Module nr. 20-00-0468	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** - Participants independently familiarize themselves with a chosen seminar topic by working with the provided initial scientific papers (usually English-language texts) - Deeper and/or wider library research originating from the initially provided papers - Critical discussion of the provided topic - Preparation of a presentation (written text and slides) about the topic - Giving a talk in front of a heterogenous (mixed prior knowledge) audience - Interactive discussion after the presentation - Medical application areas include oncology, orthopedics and navigated surgery. Learning about methods related to medical image processing: segmentation, registration, visualization, simulation, navigation, tracking and others.
2	**Learning objectives** Successful participation in the course enables students to become acquainted with an unfamilar topic by working with scientific papers. They recognize the essential aspects of the examined works and are able to concisely present them to an audience with mixed prior knowledge on the subject. They apply a number of presentation techniques in the process. The students are able to actively guide and participate in a scientific discussion on the presented topic.
3	**Recommended prerequisites for participation** Bachelor from 4. Semester or Master students.
4	**Form of examination** Course related exam: • [20-00-0468-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0468-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik B.Sc. Computational Engineering M.Sc. Computational Engineering M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

9	**References** Will be announced in seminar.

Module name
Evolutionary Systems - From Biology to Technology

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-ad-2050	3 CP	90 h	60 h	1 Term	Summer term

Language	Module owner
German	Prof. Dr.-Ing. Jürgen Adamy

1 Teaching content

theory of biological evolution, introduction to genetics, population genetics, population growth, evolutionary algorithms, applications, DNA computing, artificial life, theory of evolutionary algorithms, optimization algorithms, multi-objective optimization, meta models, co-evolution, genetic coding, representations of evolutionary algorithms, developmental processes, self-adaptation

2 Learning objectives

After attending the module, a student is capable of:

1. understanding the basic principles of evolutionary biology on a systems level,
2. transferring of this knowledge to the technical domain (evolutionary algorithms),
3. applying evolutionary algorithms to hard optimization problems,
4. gaining insight into the potentials and challenges of interdisciplinary research (natural and engineering/computer science).

3 Recommended prerequisites for participation

Introductory courses mathematics. Basic computer skills.

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC, MSc iST, MSc WI-ETiT, MSc iCE, MSc EPE, MSc CE, MSc Informatik, Biotechnik

8 Grade bonus compliant to §25 (2)

Courses

Course Nr.	Course name
18-ad-2050-vl	Evolutionary Systems - From Biology to Technology

Instructor	Type	SWS
Prof. Dr. rer. nat. Bernhard Sendhoff	Lecture	2

Module name Computational Modeling for the IGEM Competition					
Module nr. 18-kp-2100	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr. techn. Heinz Köppl		

1	**Teaching content** The International Genetically Engineered Machine (IGEM) competition is a yearly international student competition in the domain of synthetic biology, initiated and hosted by the Massachusetts Institute of Technology (MIT), USA since 2004. In the past years teams from TU Darmstadt participated and were very successfully in the competition. This seminar provides training for students and prospective IGEM team members in the domain of computational modeling of biomolecular circuits. The seminar aims at computationally inclined students from all background, but in particular from electrical engineering, computer science, physics and mathematics. Seminar participants that are interested to become IGEM team members could later team up with biologists and biochemists for the 2017 IGEM project of TU Darmstadt and be responsible for the computational modeling part of the project. The seminar will cover basic modeling approaches but will focus on discussing and presenting recent high-impact synthetic biology research results and past IGEM projects in the domain of computational modeling.
2	**Learning objectives** Students that successfully passed that seminar should be able to perform practical modeling of biomolecular circuits that are based on transcriptional and translational control mechanism of gene expression as used in synthetic biology. This relies on the understanding of the following topics: • Differential equation models of biomolecular processes • Markov chain models of biomolecular processes • Use of computational tools for the composition of genetic parts into circuits • Calibration methods of computational models from experimental measurement • Use of bioinformatics and database tools to select well-characterized genetic parts
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** BSc etit, MSc etit

Module nr. 20-00-0379	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** The lecture consists of two parts. The first half of the lecture describes how devices that yield medical image data (CT, NMR, PET, SPECT, Ultrasound) work. The second half of the lecture covers various image processing techniques that are typically applied to medical images.
2	**Learning objectives** After successfully completing the course, students have an overview over the mechanisms used in and the abilities of modern medical image processing techniques. They are able to solve basic to medium level problems in medical image processing.
3	**Recommended prerequisites for participation** Basics within Mathematics are highly recommended. Participation in lecture "Bildverarbeitung".
4	**Form of examination** Course related exam: • [20-00-0379-vl] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Courses

	Course Nr. 20-00-0379-vl	**Course name** Medical Image Processing		
	Instructor		**Type** Lecture	**SWS** 2

Module name Signal Detection and Parameter Estimation					
Module nr. 18-zo-2050	**Credit points** 8 CP	**Workload** 240 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1	**Teaching content** Signal detection and parameter estimation are fundamental signal processing tasks. In fact, they appear in many common engineering operations under a variety of names. In this course, the theory behind detection and estimation will be presented, allowing a better understanding of how (and why) to design "good" detection and estimation schemes. These lectures will cover: Fundamentals Detection Theory Hypothesis Testing Bayesian Tests Ideal Observer Tests Neyman-Pearson Tests Receiver Operating Characteristics Uniformly Most Powerful Tests The Matched Filter Estimation Theory Types of Estimators Maxmimum Likelihood Estimators Sufficiency and the Fisher-Neyman/Factorisation Criterion Unbiasedness and Minimum variance Fisher Information and the CRB Asymptotic properties of the MLE
2	**Learning objectives** Students gain deeper knowledge in signal processing based on the fundamentals taught in DSP and EtiT 4. Thexy will study advanced topics of statistical signal processing in the area of detection and estimation. In a sequence of 4 lectures, the basics and important concepts of detection and estimation theory will be taught. These will be studied in dept by implementation of the methods in MATLAB for practical examples. In sequel, students will perform an independent literature research, i.e. choosing an original work in detection and estimation theory which they will illustrate in a final presentation. This will support the students with the ability to work themselves into a topic based on literature research and to adequately present their knowledge. This is especially expected in the scope of the students' future research projects or in their professional carreer.
3	**Recommended prerequisites for participation** DSP, general interest in signal processing
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT,MSc iST, MSc iCE, Wi-ETiT
8	**Grade bonus compliant to §25 (2)**

Module name Sensor Signal Processing					
Module nr. 18-kn-2130	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. Mario Kupnik		

1	**Teaching content** The module provides knowledge in-depth about the measuring and processing of sensor signals. In the area of primary electronics, some particular characteristics such as errors, noise and intrinsic compensation of bridges and amplifier circuits (carrier frequency amplifiers, chopper amplifiers, Low-drift amplifiers) in terms of error and energy aspects are discussed. Within the scope of the secondary electronic, the classical and optimal filter circuits, modern AD conversion principles and the issues of redundancy and error compensation will be discussed.
2	**Learning objectives** The Students acquire advanced knowledge on the structure of modern sensors and sensor proximity signal processing. They are able to select appropriate basic structure of modern primary and secondary electronics and to consider the error characteristics and other application requirements.
3	**Recommended prerequisites for participation** Measuring Technique, Sensor Technique, Electronic, Digital Signal Processing
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)

Courses

Course Nr. 18-kn-2130-vl	**Course name** Sensor Signal Processing	
Instructor Prof. Dr. Mario Kupnik	**Type** Lecture	**SWS** 2

Module name Measuring Technique					
Module nr. 18-kn-1011	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. Mario Kupnik		

1 Teaching content

The module includes theoretical discussion and practical application of the measuring chain in detail on example the electrical variables (current, voltage, impedance, power) and selected non-electrical variables (frequency, time, force, pressure and acceleration).
In the lecture the following chapter will be thematically treated measuring signals and measuring equipment (oscilloscope, laboratory testing equipment), static measurement error and disturbance variables (especially temperature), basic measurement circuits, AD conversion principles and filtering, measurement method non-electrical variables and the statistics of measurements (distributions, statist safe tests).
The topics of the lecture are discussed in the exercise of the module. Examples are analyzed and their application in measurement scenarios are practiced.
The practicum of the module consists of five experiments which are time closely matched in time to the lecture:

- Measuring of signals in the time range with digital storage oscilloscope, trigger conditions
- Measuring of signals in the frequency range with digital storage oscilloscope, error of measurement (aliasing / subsampling, leackage) and window functions
- Measuring of mechanical dimensions with suitable primary sensors, sensor electronics / amplifier circuits
- computer-based measuring
- Importing of sensor signals, whose processing and the resulting automated control of a process using a programmable logic controller (PLC)

2 Learning objectives

The students know the structure of the measuring chain and the specific properties of the corresponding elements. They know the structure of electronic measuring instruments and basic measuring circuits for electrical and selected non-electrical variables and can apply them. They know the basics of capturing, processing, transferring and storage of measurement data and can describe error sources and quantifying their influences.
In the practicum, the students deepen the basis of the measurements with the oscilloscope, the understanding of the relationship between time and frequency range. Methodically they are able to document and evaluate the data during laboratory measuring.

3 Recommended prerequisites for participation

Basics of ETiT I-III, Math I-III, Electronic

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

Course related exam:

- [18-kn-1011-pr] (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

1 Teaching content

The course covers mathematical methods used in the area of systems and synthetic biology. On the one hand it deals with practical modeling of molecular processes but also with theoretical investigations that reveal general properties of those processes. The course follows a microscopic approach and introduces those processes using probabilistic methods. For that, necessary prerequists are recapitulated, such as definition of Markov processes in different spaces and their properties. With this background, the dynamics of stochastic reaction kinetics in terms of population models is investigated. Limiting cases are introduced, such as the diffusion approximation or the deterministic approximation (fluid approximations) of those systems. Often methods from statistical physics are applied. Numerical methods for solving the corresponding Fokker-Planck and Master equations are discussed. For the limiting case of a deterministic approximation, traditional methods for the stability analysis of nonlinear differential equations are introduced and methods are discussed that just rely on the topology of the reaction network to determine stability properties. In this context, a derivation of the moment dynamics and approximation methods based on moment closure are given. Connections to queueing theory models are shown. Furthermore, the question is addressed of how the introduced dynamical models are calibrated to data from molecular biology. For that, general methods of statistical inference from statistics and of machine learning from computer science are discussed and specialized algorithms for the considered system class are presented. Additionally, a short introduction to the theory of nonlinear optimal filtering is given and special cases such as hidden Markov models are discussed.
Beyond reaction kinetics, the course provides a basic introduction to the modeling and numerical methods used in molecular dynamics. Newtonian multi-body simulations and classical potentials and their use in molecular dynamics are discussed. Most of the topics in this course are introduced through practical examples from applied modeling in the domain of systems biology. The applicability of the respective methods in synthetic biology is highlighted.

2 Learning objectives

Students that successfully passed that course should be able to perform practical modeling of molecular processes and to determine dynamical properties of model using mathematical methods. It relies on the understanding of the following topics:

- Mathematical abstraction of molecular mechanisms
- General properties of stochastic processes
- Approximation methods for Markovian population models
- Stability analysis of nonlinear differential equations
- Numerical methods for solving/simulating stochastic systemsSystem identification/machine learning for stochastic systems

3 Recommended prerequisites for participation

Basic knowledge of programming, Matlab.

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

	Instructor Prof. Dr. techn. Heinz Köppl		**Type** Practice	**SWS** 1

Module name Deep Generative Models					
Module nr. 20-00-1035	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1	**Teaching content** Generative Models, Implicit and Explicit Models, Maximum Likelihood, Variational AutoEncoders, Generative Adversarial networks, Numerical Optimization for Generative models, Applications in medical Imaging
2	**Learning objectives** After students have attended the module, they can - Explain the structure and operation of Deep Generative Models (DGM) - Critically scrutinize scientific publications on the topic of DGMs and thus assess them professionally - independently construct / implement basic DTMs in a high-level programming language designed for this purpose - Transfer the implementation and application of DTMs to different applications
3	**Recommended prerequisites for participation** - Python Programming - Linear Algebra - Image Processing/Computer Vision I - Statistical Machine Learning
4	**Form of examination** Course related exam: • [20-00-1035-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1035-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B,Sc, Informatik M.Sc. Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.
9	**References** No textbooks as such. Online materials will be made available during the course.

Courses

Course Nr.	**Course name**		
20-00-1035-iv	Deep Generative Models		
Instructor Prof. Dr.-Ing. Michael Gösele		**Type** Integrated course	**SWS** 4

Module name Basics of Biophotonics					
Module nr. 18-fr-2010	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. habil. Torsten Frosch		

1	**Teaching content** Review of the fundamentals of optics, laser technology, light-matter interaction, and spectroscopic systems, covering medical applications such as photodynamic therapy and optical heart rate measurement etc.; spectroscopy and imaging with linear optical processes: IR absorption, Raman spectroscopy, with applications e.g. in breath analysis, drug quality control, as well as detection of biomarkers; laser microscopy, e.g. wide-field microscopy, Raman microscopy and chemical imaging, fluorescence microscopy, with applications e.g. in neurostimulation research; spectroscopy and imaging with nonlinear optical processes: fundamentals of nonlinear optics, multi-photon fluorescence, e.g., with application for in vivo imaging of the brain, coherent nonlinear optical processes such as SHG and CARS, multimodal imaging, e.g. with potential application in intra-operative tumor imaging.
2	**Learning objectives** Students get to know established and state of the art biophotonic systems in medical technology and understand the underlying concepts. They are familiar with linear and nonlinear optical processes of light-matter interaction and understand the principles of spectroscopy and microscopy based on them. With the help of the gained knowledge, the students will be able to evaluate and compare common biophotonic methods and instruments. Furthermore, they will be able to recommend appropriate techniques and methods for a particular application.
3	**Recommended prerequisites for participation** Physics for Electrical Engineering and Mathematics I (Electrical Engineering)
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc (WI-) etit, MSc MEC, MSc MedTec, BSc/MSc iST
8	**Grade bonus compliant to §25 (2)**

	Instructor Prof. Dr. habil. Torsten Frosch		**Type** Lecture	**SWS** 2
	Course Nr. 18-fr-2010-ue	**Course name** Basics of Biophotonics		
	Instructor Prof. Dr. habil. Torsten Frosch, M.Sc. Niklas Klosterhalfen		**Type** Practice	**SWS** 1

Module name Artificial Intelligence in Medicine					
Module nr. 18-ha-2020	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Christoph Hoog Antink		

1 Teaching content

- Introduction, terms and delimitations
- Data acquisition and preprocessing
- Feature extraction and visualization methods
- Statistical fundamentals
- Classification methods
  - Linear Regression, Logistic Regression
  - Support Vector Machines
  - Decision Trees, Random Forest, XGBoost
  - Neural Networks
- Overfitting and underfitting with medical data
- Influence of unbalanced data sets
- Evaluation of algorithms
- "Explainable AI"
- Regulatory Requirements

2 Learning objectives

Students have a basic understanding of the terminology of Artificial Intelligence, especially in the medical context. They have learned how features can be extracted from medical data and visualized. The students have an overview of current procedures and know how they work. They are familiar with current application examples from various subfields of medical technology, e.g. signal processing, image processing, spectroscopy, gene sequencing, etc. Students understand the dangers of underfitting, overfitting, and imbalanced (e.g. related to gender ratio) data sets in a medical context. They are aware of the social and ethical responsibility of their future professional activities in relation to Fair AI. Students have an advanced understanding of algorithm evaluation, are familiar with the concept of ”Explainable AI” and know the basic regulatory requirements for medical software. They are able to independently develop AI-based solutions to medical technology problems.

3 Recommended prerequisites for participation

18-zo-1030 Fundamentals of Signal Processing

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 21 students register, the examination will be an oral examination (duration: 20 min.).

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc MedTec, BSc/MSc iST, MSc MEC

8 Grade bonus compliant to §25 (2)

	Grade improvements up to 0.4 according to APB 25 (2) through bonus for successful completion of online tests.

Courses

Course Nr. 18-ha-2020-vl	**Course name** Artificial Intelligence in Medicine		
Instructor Prof. Dr.-Ing. Christoph Hoog Antink		**Type** Lecture	**SWS** 2
Course Nr. 18-ha-2020-ue	**Course name** Artificial Intelligence in Medicine		
Instructor Prof. Dr.-Ing. Christoph Hoog Antink		**Type** Practice	**SWS** 1

Module name Bioinformatics I					
Module nr. 18-kp-1020	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr. techn. Heinz Köppl		

1 Teaching content

- Biomolecular foundations of high-throughput measurement techniques (Microarrays, RNA-Seq, genome sequencing, proteinarrays, mass-spectrometry, flow-cytometry, mass-cytometry, genomics, proteomics, metabolomics)
- Foundations of statistics and machine learning (decision theory, regression, classification and clustering)
- Exact substring search, dynamic programming, algorithms for sequence comparison (PAM, BLAST, BLAST2, etc), alignment of multiple sequences (ClustalW, DAlign, etc)
- Important databases in bioinformatics and their use in medicine and biology (GenBank, Gene Expression Omnibus, Rfam, UniProt, Pfam, KEGG, BRENDA, Pathway Commons)
- Analysis of interaction networks (modularity, graph partitioning, spanning trees, differential network analysis, network motifs, STRING database, PathBLAST)
- Introduction to structural biology, structure prediction for RNA and proteins, Protein Data Bank (PDB)

2 Learning objectives

After successful completion students are aware of frequently used high-throughput methods in molecular biology and are familiar with the resulting data format. They know the most important bioinformatics databases and acquired the necessary background to understand standard bioinformatics algorithms and to implement them from scratch in R or Matlab. Students are familiar with the basics of structural analysis and with structure prediction. With respect to communication skills, students learned to exchange informatio, ideas, problems and solutions related to bioinformatics with experts and with lay persons.

3 Recommended prerequisites for participation

„General Computer Science I“

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing of Module final exam

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

BSc Biomedical Engineering

8 Grade bonus compliant to §25 (2)

2.5 Optional Subjects AIS-CSR: Control Systems and Robotics

Module name Optimal and Predictive Control					
Module nr. 18-fi-2010	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Rolf Findeisen		

1 Teaching content

Optimal control approaches, like model predictive control, are one of the most versatile, flexible and most often used modern control approaches by now. Fields of applications span from robotics, autonomous driving, aerospace systems, energy systems, chemical processes, biotechnology, up to biomedicine. The lecture provides an introduction to fundamentals of optimal control, focusing on the method and theoretical base. It furthermore provides an outreach towards efficient numerical solution strategies and model predictive control.

The following topics are covered during the lecture:

- Application examples from various fields such mechatronics, robotics, electrical systems, chemical processes, economics, as well as aeronautics
- Review of nonlinear programming
- Dynamic programming, the principle of optimality, Hamilton-Jacobi-Bellman equation
- Pontryagin maximum principle
- Infinite and finite-horizon optimal control, LQ optimal control
- Numerical solution approaches for optimal control problems
- Introduction to model predictive control (MPC)

2 Learning objectives

The students learn how to formulate, analyze, and solve optimal control problems. The course focuses on key ideas and concepts of optimal control. The students learn standard methods for computing and implementing optimal control strategies.

3 Recommended prerequisites for participation

Basic lecture of control engineering and system theory with a focus on state space formulations

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

MSc MEC, BSc iST, MSc CE, MSc WI-etit

8 Grade bonus compliant to §25 (2)

9 References

Lecture notes and slides will be provided in the elearning system

Module nr. 20-00-0735	**Credit points** 10 CP	**Workload** 300 h	**Self study** 210 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Oskar von Stryk		

1	**Teaching content** This course covers spatial representations and transformations, manipulator kinematics, vehicle kinematics, velocity kinematics, Jacobian matrix, robot dynamcis, robot sensors and actuators, robot control, path planning, localization and navigation of mobile robots, robot autonomy and robot development. Theoretical and practical assignments as well as programming tasks serve for deepening of the understanding of the course topics.
2	**Learning objectives** After successful participation, students possess the basic technical knowledge and methodological skills necessary for fundamental investigations and engineering developments in robotics in the fields of modeling, kinematics, dynamics, control, path planning, navigation, perception and autonomy of robots.
3	**Recommended prerequisites for participation** Recommended: basic mathematical knowledge and skills in linear algebra, multi-variable analysis and fundamentals of ordinary differential equations
4	**Form of examination** Course related exam: • [20-00-0735-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

Main topics covered are:

1. Root locus method (construction and application),
2. State space representation of linear systems (representation, time solution, controllability, observability, observer- based controller design)

2 Learning objectives

After attending the module, a student is capable of:

1. constructing and evaluating the root locus of given systems
2. describing the concept and importance of the state space for linear systems
3. defining controllability and observability for linear systems and being able to test given systems with respect to these properties
4. stating controller design methods using the state space, and applying them to given systems
5. applying the method of linearization to non-linear systems with respect to a given operating point

3 Recommended prerequisites for participation

System Dynamics and Control Systems I

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 180 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

1 Teaching content

Topics covered are:

1. basic properties of non-linear systems,
2. limit cycles and stability criteria,
3. non-linear control of linear systems,
4. non-linear control of non-linear systems,
5. observer design for non-linear systems

2 Learning objectives

After attending the module, a student is capable of:

1. explaining the fundamental differences between linear and non-linear systems,
2. testing non-linear systems for limit cycles,
3. stating different definitions of stability and testing the stability of equilibria,
4. recalling the pros and cons of non-linear controllers for linear systems,
5. recalling and applying different techniques for controller design for non-linear systems,
6. designing observers for non-linear systems

3 Recommended prerequisites for participation

1	**Teaching content** In "Robot Learning: Integrated Project, Part 1", students will pose a current research problem in the domain of robot learning with assistance of their advisor. The students will select a robot learning topic to fit their research interests, on which they will pursue in-depth literature studies. Using these results, they will develop a plan for their project, try out the algorithms of interest and implement a prototype in simulation.
2	**Learning objectives** Upon successful completion of this course, students will be able to independently develop small research projects in the domain of robot learning and test first research ideas in simulation.
3	**Recommended prerequisites for participation** Previous or concurrent participation in the lecture "Robot Learning".

Module nr. 18-ad-2060	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1	**Teaching content** During the laboratory course the following experiments will be conducted: Coupling control of a helicopter, Non-linear control of a gyroscope, Nonlinear multivariable control of an aircraft, Servo control systems, Control of an overhead crane system, Programmable logic control of a stirring process
2	**Learning objectives** After attending this laboratory course, a student is capable of: 1. recalling the basics of the conducted experiments, 2. organize and comprehend background information for experiments, 3. assemble experimental set-ups based on manuals, 4. judge the relevance of experimental results by comparing them with theoretically predicted outcomes, 5. present the results of the experiments
3	**Recommended prerequisites for participation** System Dynamics and Control Systems II, the attendance of the additional lecture “System Dynamics and Control Systems III” is recommended
4	**Form of examination** Module exam: • Module exam (Study achievement, Examination, Duration: 180 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc MEC, MSc iST, MSc Wi-ETiT, Biotechnik
8	**Grade bonus compliant to §25 (2)**
9	**References** Adamy: Instruction manuals for the experiments (available during the kick-off meeting)

Courses

	Course Nr. 18-ad-2060-pr	**Course name** Laboratory Control Engineering II		
	Instructor Prof. Dr.-Ing. Jürgen Adamy, M.Sc. Nikolas Hohmann		**Type** Internship	**SWS** 4

Module name Laboratory Matlab/Simulink II					
Module nr. 18-ko-2070	**Credit points** 4 CP	**Workload** 120 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1	**Teaching content** The lab is split into the two parts Simulink and Control Engineering II. First the fundamentals of the simulation tool Simulink are introduced and their application to problems from different fields of application is trained. In the second part, the knowledge gained in the first part is applied to autonomously solve several control design problems as well as simulation tasks.
2	**Learning objectives** The students will be able to work with the tool MatLab/Simulink on their own and can solve tasks from the areas of control engineering and numericial simulation. The students will know the different design methods of the control system toolbox and the fundamental concepts of the simulation tool Simulink. They can practically apply the knowledge gathered in the lectures “System Dynamics and Control Systems I and II” and “Modelling and Simulation”.
3	**Recommended prerequisites for participation** The lab should be attended in parallel or after the lectures “System Dynamics and Control Systems II” and “Modelling and Simulation”
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSC MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture notes for the lab tutorial can be obtained at the secretariat

Courses

Course Nr.	**Course name**		
18-ko-2070-pr	Laboratory Matlab/Simulink II		
Instructor		**Type**	**SWS**
M.Sc. Marcel Bonnert, Prof. Dr.-Ing. Ulrich Konigorski		Internship	4

Module name Project Course Control Engineering					
Module nr. 18-ko-2090	**Credit points** 8 CP	**Workload** 240 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1 Teaching content

Teams of 2 - 4 students work on different control engineering projects under the guidance of a project coordinator from the institute. The projects mainly cover the following subject areas:

- Modelling, analysis and design of multivariable control systems
- Modelling, analysis and design of distributed parameter systems
- Robust control design
- System analysis, supervision and fault diagnosis
- Modelling and identification

Application areas are machine tools, production lines, test benches, process control, automobiles.

2 Learning objectives

After completing the project the students will be familiar with the individual steps of investigating a control engineering project. This includes in particular the compilation of a system specification as well as critical discussions and systematic selection of appropriate control engineering solutions and their real technical implementation. Doing so the students learn the practical application of control engineering methods taught in the lecture “System Dynamics and Control Systems I” to real world problems. Additionally, in this project course the students are supposed to improve their professional skills. These skills include e.g. teamwork, presentation techniques and systematic information retrieval.

3 Recommended prerequisites for participation

Lecture “System Dynamics and Control Systems I”

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC

8 Grade bonus compliant to §25 (2)

9 References

Handouts will be distributed at start of the project (e.g. Hints for writing a project documentation, etc.)

Courses

Course Nr.	**Course name**		
18-ko-2090-pj	Project Course Control Engineering		
Instructor		**Type**	**SWS**
Prof. Dr.-Ing. Ulrich Konigorski		Project seminar	4

Module name
Project Seminar Robotics and Computational Intelligence

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-ad-2070	8 CP	240 h	180 h	1 Term	Summer term

Language	Module owner
German	Prof. Dr.-Ing. Jürgen Adamy

1 Teaching content

The following topics are taught in the lecture:

Industrial robots

1. Types and applications
2. Geometry and kinematics
3. Dynamic model
4. Control of industrial robots

Mobile robots

1. Types and applications
2. Sensors
3. Environmental maps and map building
4. Trajectory planning

Group projects are arranged in parallel to the lectures in order to apply the taught material in practical exercises.

2 Learning objectives

After attending the lecture, a student is capable of: 1. recalling the basic elements of industrial robots, 2. recalling the dynamic equations of industrial robots and be able to apply them to describe the dynamics of a given robot, 3. stating model problems and solutions to standard problems in mobile robotics, 4. planing a small project, 5. organizing the work load in a project team, 6. searching for additional background information on a given project, 7. creating ideas on how to solve problems arising in the project, 8. writing an scientific report about the outcome of the project 8. presenting the results of the project.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC, MSc iST, MSc WI-ETiT, MSc iCE, MSc EPE, MSc CE, MSc Informatik

8 Grade bonus compliant to §25 (2)

	Instructor Prof. Dr.-Ing. Jürgen Adamy		**Type** Project seminar	**SWS** 4

Module name Robust Control					
Module nr. 18-ko-2140	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1 Teaching content

- Basics (SVD, norms, system representations)
- Control design in the frequency domain
  - Expressing control tasks as H2 and Hinf optimization problems
  - Design of H2 and Hinf optimal controllers
- Robust Control
  - Uncertainity representations (Additive und multiplicative uncertainities, multi model representations)
  - Analysis of robustness (Small-Gain-theorem, mu-analysis)
  - Robust control design in the frequency domainRobust control design by region-based pole placement

2 Learning objectives

The students are able to express control tasks as H2 and H8 optimization problems, to represent uncertainities of a system in a suitable form and to design a controller which ensures robust stability and robust performance.

3 Recommended prerequisites for participation

Systemdynamik und Regelungstechnik I und II

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

Module name Practical Training with Drives					
Module nr. 18-bi-2100	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1	**Teaching content** The purpose of this laboratory is gaining extented knowledge about realization and behaviour of drive systems. An introduction in measurement problems concerning drives is given. The contents of the laboratory is setting drives to work and investigating drive systems under laboratory conditions. Special attention is paid to inverter-fed AC drives. The laboratory experiments are individually coordinated with the previous knowledge of the respective courses (ETiT or MEC).
2	**Learning objectives** The students get the ability of measurement for electrical motors, generators and transformers.
3	**Recommended prerequisites for participation** Bachelor of Science in Electrical Engineering, Power Engineering or similar
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc MEC, MSc WI-ETiT

Module name Control of Drives					
Module nr. 18-gt-2020	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1 Teaching content

Control structures for drives; Design of controllers for drives; VSIs for drives; Space Vectors as basis of modelling AC-machines; Reference frames for description of AC-machines; Control oriented block diagram for DC-drive; Structure and design of the controllers;
Control oriented block diagram for Permanent Magnet Synchronous Machine (PMSM); Control oriented block diagram for Induction machine (IM)
Torque control for AC-machines using linear or switching controllers. Field Oriented Control and Direct Torque Control for PMSM and IM. Models and observers for rotor flux of IM
Speed control, including oscillatory load. Resolver and Encoder. Problem of Motion control

2 Learning objectives

Upon successful completion of the module, students will be able to:

1. develop the control-oriented block diagrams for the DC-machine operating in base speed range as well as in field weakening range.
2. design the control loops for 1.) concerning the structure and the control parameters.
3. Understand and apply space vectors and master their application in different rotating frames of reference.
4. Develop the dynamic equations of the permanent exited synchronous machine and the induction machine and to simplify these equations by help of suitable rotating reference frames and represent these equations as non-linear control-oriented block diagram.
5. Design the control loops according to 4.) especially the field-oriented control concerning the structure of the control loops and the control parameters.
6. Understand the deduction of equations given in the literature for machine types, which are not discussed in this lecture, e.g. for the doubly fed induction machine.
7. Derive the models and the observers for the rotor flux for the induction machine in different frames of reference and to apprise the benefits and drawbacks of the different solutions.
8. Design the control loops for the super-imposed speed controls even for mechanically oscillating loads.

3 Recommended prerequisites for participation

BSc ETiT or equivalent, especially Control Theory and Electrical Machines / Drives

4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc EPE, MSc MEC, Wi-ETiT

8 Grade bonus compliant to §25 (2)

1	**Teaching content** State space description of discrete-time systems, controllability, observability, state feedback controller, pole assignment, PI-state feedback controller, discrete state observers, modified Luenberger observer
2	**Learning objectives** The students know the state spacel description of sampled control systems and the corresponding analysis and design methods. They can design deadbeat controllers, state feedback controllers by pole assignment and PI- state feedback controllers for single input systems and know how to implement state feedback controllers together with a discrete- time observer.
3	**Recommended prerequisites for participation** Knowledge of the z-transform as well as the fundamentals of discrete-time control systems. These fundamentals are taught in the lecture “Digital Control systems I”.
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)

Module name Technical Mechanics for Electrical Engineering					
Module nr. 16-26-6400	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Dr.-Ing. Nicklas Norrick		

1	**Teaching content** Statics: force, moment (torque), free body diagram, equilibrium equations, center of gravity, truss, beams, adhesion and friction. Mechanics of elastic bodies: stress and deformation, tension, torsion, bending. Kinematics: point and rigid body movement. Kinetics: dynamic force and moment equilibrium equations, energy and work, linear oscillators, momentum and angular momentum conservation laws, impact.
2	**Learning objectives** In this course the students will learn the basic concepts of technical mechanics. They should be able to analyze the statics of simple statically determinate planar systems, to carry out elementary elastomechanical calculations of statically determinate and statically indeterminate structures, to describe and analyze movements, and to solve planar motion problems, oscillation and shock phenomena with the laws of kinetics.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

Module name Measuring Technique					
Module nr. 18-kn-1011	**Credit points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. Mario Kupnik		

1 Teaching content

The module includes theoretical discussion and practical application of the measuring chain in detail on example the electrical variables (current, voltage, impedance, power) and selected non-electrical variables (frequency, time, force, pressure and acceleration).
In the lecture the following chapter will be thematically treated measuring signals and measuring equipment (oscilloscope, laboratory testing equipment), static measurement error and disturbance variables (especially temperature), basic measurement circuits, AD conversion principles and filtering, measurement method non-electrical variables and the statistics of measurements (distributions, statist safe tests).
The topics of the lecture are discussed in the exercise of the module. Examples are analyzed and their application in measurement scenarios are practiced.
The practicum of the module consists of five experiments which are time closely matched in time to the lecture:

- Measuring of signals in the time range with digital storage oscilloscope, trigger conditions
- Measuring of signals in the frequency range with digital storage oscilloscope, error of measurement (aliasing / subsampling, leackage) and window functions
- Measuring of mechanical dimensions with suitable primary sensors, sensor electronics / amplifier circuits
- computer-based measuring
- Importing of sensor signals, whose processing and the resulting automated control of a process using a programmable logic controller (PLC)

2 Learning objectives

The students know the structure of the measuring chain and the specific properties of the corresponding elements. They know the structure of electronic measuring instruments and basic measuring circuits for electrical and selected non-electrical variables and can apply them. They know the basics of capturing, processing, transferring and storage of measurement data and can describe error sources and quantifying their influences.
In the practicum, the students deepen the basis of the measurements with the oscilloscope, the understanding of the relationship between time and frequency range. Methodically they are able to document and evaluate the data during laboratory measuring.

3 Recommended prerequisites for participation

Basics of ETiT I-III, Math I-III, Electronic

4 Form of examination

Module exam:

1	**Teaching content** Structure and design methods of elektromechanical systems, mechanical, acoustical and thermal networks, transducers between mechanical and acoustical networks. Design and devices of electromechanical transducers.
2	**Learning objectives** Comprehension, description, calculation and application of the most relevant electromechanical transducers, comprising electrostatic transducer (e.g. microphone and accelerometer), piezoelectric transducers (e.g micro motors, micro sensors), electrodynamic transducer (loudspeaker, shaker), piezomagnetic transducer (e.g. ultrasonic source). Design of complex electromechanical systems like sensors and actuators and their applications by applying the discrete element network method.
3	**Recommended prerequisites for participation** Electrical Engineering and Information Technology I
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, BSc WI-ETiT, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** Book: Electromechanical Systems in Microtechnic und Mechatronic, Springer 2012, Script for lecture Electromechanical Systems I, Workbook

Courses

	Course Nr. 18-kn-1050-vl	**Course name** Electromechanical Systems I		
	Instructor Prof. Dr. Mario Kupnik, M.Sc. Omar Dali, Prof. Dr. techn. Dr.h.c. Andreas Binder		**Type** Lecture	**SWS** 2
	Course Nr. 18-kn-1050-ue	**Course name** Electromechanical Systems I		
	Instructor Prof. Dr. Mario Kupnik, M.Sc. Omar Dali, Prof. Dr. techn. Dr.h.c. Andreas Binder		**Type** Practice	**SWS** 2

Module name
Introduction to Electrodynamics

Module nr.	Credit points	Workload	Self study	Module duration	Module cycle
18-dg-1010	5 CP	150 h	90 h	1 Term	Summer term

Language	Module owner
German	Prof. Dr.-Ing. Herbert De Gersem

1 Teaching content
Vector calculus, orthogonal coordinate systems, Maxwell's equations, interface and boundary conditions, layered media, electrostatics, scalar potential, Coulomb integral, separation of variables, method of image charges, magnetostatics, vector potential, Biot-Savart law, stationary current fields, fields in matter, energy flow, skin effect, plane waves, polarization, TEM waves, reflection and multi-layer problems, multi conductor transmission lines (capacitance, inductance, and conductance matrix), velocity definitions, basics of rectangular waveguides.

2 Learning objectives
Students will be familiar with Maxwell's equations in integral and differential form for static and dynamic field problems. They will have a mental picture of wave phenomena in free space. They are able to recognice and interpret wave effects in the different areas of electrical engineering. They are able to derive the wave effects from Maxwell's equations and have a good understanding of the necessary mathematical tools.

3 Recommended prerequisites for participation
Lecture notes. Further literature recommendations are given in the course.

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 180 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc Wi-ETiT

8 Grade bonus compliant to §25 (2)
Improvement by up to 0.4 due to bonus points which can be acquired by means of e-learning online tests.

9 References
Lecture notes. Further literature recommendations are given in the course.

Module name Railway Vehicle Engineering					
Module nr. 18-bi-2050	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1 Teaching content

From the comprehensive and interdisciplinary domain of the railway technology (vehicle technology, signal and safety technology, construction engineering and railway operating technology) the lecture picks out the domain of the automotive engineering with the emphasis of the mechanical part. It offers an interrelated introduction into selected chapters of the rail vehicle engineering with special emphasis in the railway-specific technical solutions and procedures. The lecture is divided into 7 chapters, whereby four chapters the theoretical basic topics cover and three chapters the fundamental components of the rail vehicle present.
In a one-day excursion, it is possible to gain insights into the production of modern rail vehicles. Participation is voluntary.

2 Learning objectives

Basic understanding of mechanical parts of railways and their components.

3 Recommended prerequisites for participation

Bachelor in Electrical Engineering, Mechatronics or Mechanical Engineering

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

In general, the examination takes place in form of a written exam (duration: 90 minutes). If up to 20 students register in semesters in which the lecture does not take place, there will be an oral examination (duration: 30 min.). The type of examination will be announced within one working week after the end of the examination registration phase.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC, MSc EPE, MSc WI-ETiT

8 Grade bonus compliant to §25 (2)

Courses

Course Nr. 18-bi-2050-vl	**Course name** Railway Vehicle Engineering		
Instructor		**Type** Lecture	**SWS** 2

Module name Identification of Dynamic Systems					
Module nr. 18-ko-2040	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1 Teaching content

- Introduction into the determination of mathematical process models based on measured data
- Theoretical and experimental modeling of dynamic systems
- System identification using continuous time signals:
  - Aperiodic signals
    - Fourier analysis
    - Evaluation of characteristic values (stepresponses)
  - Periodic signals
    - Frequency response analysis
    - Correlation analysis
- System identification using discrete time signals:
  - Deterministic and stochastic signals
  - Basics in estimation theory
  - Correlation analysis
- Parameter estimation techniques:
  - Least-squares estimation
  - Model structure determination
  - Recursive estimation algorithms
- Kalman Filter and Extended Kalman Filter
- Numerical Methods
- Implementation under MatLab Numerous examples with real experimental data

2 Learning objectives

The students are taught the fundamental methods in signal and system analysis. Furthermore, the students master methods such as Fourier analysis, correlation analysis and parameter estimation methods. Based on this foundation, the students are able to assess and to apply the individual methods and can derive non-parametric as well as parametric models from measured data.

3 Recommended prerequisites for participation

MSc ETiT, MSc MEC

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

All disciplines of Electrical Engineering and Information Technology and similar disciplines (Mechatronics, Mechanical and Process Engineering, ...), Master of Science

8 Grade bonus compliant to §25 (2)

Module nr. 20-00-0629	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner**		

1	**Teaching content** - Foundations from robotics and machine learning for robot learning - Learning of forward models - Representation of a policy, hierarchical abstraction wiith movement primitives - Imitation learning - Optimal control with learned forward models - Reinforcement learning and policy search - Inverse reinforcement learning
2	**Learning objectives** Upon successful completion of this course, students are able to understand the relevant foundations of machine learning and robotics. They will be able to use machine learning approaches to empower robots to learn new tasks. They will understand the foundations of optimal decision making and reinforcement learning and can apply reinforcement learning algorithms to let a robot learn from interaction with its environment. Students will understand the difference between Imitation Learning, Reinforcement Learning, Policy Search and Inverse Reinforcement Learning and can apply each of this approaches in the appropriate scenario.
3	**Recommended prerequisites for participation** Good programming in Matlab Lecture Machine Learning 1 - Statistical Approaches is helpful but not mandatory.
4	**Form of examination** Course related exam: • [20-00-0629-vl] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0629-vl] (Technical examination, Oral/written examination, Weighting: 100 %)

Module name New Technologies of Electrical Energy Converters and Actuators					
Module nr. 18-bi-2040	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German/English			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		

1 Teaching content

Goal: The application of new technologies, i.e. super conduction, magnetic levitation techniques and magneto-hydrodynamic converter principles, are introduced to the students. The physical operation mode in principle, implemented prototypes and the current state of the development are described in detail.

Content:

Application of the superconductors for electrical energy converters:

- rotating electrical machines (motors and generators),
- solenoid coils for the fusion research,
- locomotive- and railway transformers,
- magnetic bearings.

Active magnetic bearings (“magnetic levitation”):

- basics of the magnetic levitation technique,
- magnetic bearings for high speed drives in kW to MW range,
- application for high-speed trains with linear drives.

Magneto-hydrodynamic energy conversion:

- physical principle,
- state of the art and perspectives.

Fusion research:

- magnetic field arrangements for contactless plasma inclusion,
- state of the current research.

2 Learning objectives

Basic knowledge in application of superconductivity in energy systems is understood as well as magnetic levitation, magnetohydrodynamics and fusion technology.

3 Recommended prerequisites for participation

Physics, Electrical Machines and Drives, Electrical Power Engineering

4 Form of examination

Module exam:

- Module exam (Technical examination, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Optional, Weighting: 100 %)

7 Usability of the module

MSc EPE, MSc ETiT, MSc MEC, MSc WI-ETiT

8 Grade bonus compliant to §25 (2)

1	**Teaching content** Electromechanical sensors, drives and actuators, electronic signal processing mechanisms, systems from actuators, sensors and electronic signal processing mechanism.
2	**Learning objectives** Elaborating concrete examples of electromechanical systems, which are explained within the lecture EMS I+II. The Analyzing of these examples is needed to explain the mode of operation and to gather characteristic values. On this students are able to explain the derivative of proposals for the solution. The aim of the 6 laboratory experiments is to get to know the mode of operation of the electro- mechanical systems. The experimental analysis of the characteristic values leads to the derivation of proposed solutions.
3	**Recommended prerequisites for participation** Bachelor ETiT
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

Language German			**Module owner** Prof. Dr.-Ing. Ulrich Konigorski		

1	**Teaching content** In this lab tutorial, an introduction to the software tool MatLab/Simulink will be given. The lab is split into two parts. First the fundamentals of programming in Matlab are introduced and their application to different problems is trained. In addition, an introduction to the Control System Toolbox will be given. In the second part, the knowledge gained in the first part is applied to solve a control engineering specific problem with the software tools.
2	**Learning objectives** Fundamentals in the handling of Matlab/Simulink and the application to control engineering tasks.
3	**Recommended prerequisites for participation** The lab should be attended in parallel or after the lecture “System Dynamics and Control Systems I”
4	**Form of examination** Module exam: • Module exam (Study achievement, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Optional, Weighting: 100 %)

1 Teaching content

- Control of a 2-tank system.
- Control of pneumatic and hydraulic servo-drives.
- Control of a 3 mass oscillator.
- Position control of a MagLev system.
- Control of a discrete transport process with electro-pneumatic components.
- Microcontroller-based control of an electrically driven throttle valve.
- Identification of a 3 mass oscillator.
- Process control using PLC.

2 Learning objectives
After this lab tutorial the students will be able to practically apply the modelling and design techniques for different dynamic systems presented in the lecture ”System dynamics and control systems I” to real lab experiments and to bring them into operation at the lap setup.

3 Recommended prerequisites for participation
System Dynamics and Control Systems I

4 Form of examination
Module exam:

- Module exam (Study achievement, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

The students work in small groups, supervised by a scientific staff member, on individual problems taken from the field of automatic control. A compulsory training course is part of the project course and will cover the topics

1. team work and project management,
2. professional presentation skills, and
3. scientific writing skills.

2 Learning objectives

After attending the project course, a student is capable of:

1. planing a small project,
2. organizing the work within a project team,
3. searching for scientific background information on a given project,
4. creating ideas on how to solve problems arising in the project,
5. presenting the results in a scientific report, and
6. giving a talk on the results of the project.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

1 Teaching content

Teams of 2-4 students work on different mechatronic projects under the guidance of a project coordinator from the institute.The projects mainly cover the following subject areas:

- Modeling, analysis, and design of mechatronic systems
- Robust control design
- System analysis, supervision and fault diagnosis
- Modeling and identification

Application areas are mechatronic actuators, machine tools, production lines, test benches, automobiles, quadrocopters.

2 Learning objectives

After completing the project, the students will be familiar with the individual steps of investigating a mechatronic project. This includes in particular the compilation of a system specification as well as critical discussions and systematic selection of appropriate mechatronic solutions and their real technical implementation. Doing so, the students learn the practical application of mechatronic methods taught in the lectures to real world problems. Additionally, in this project course, the students are supposed to improve their professional skills. These skills include e.g. teamwork, presentation techniques and systematic information retrieval.

3 Recommended prerequisites for participation

Lectures „System Dynamics and Automatic Control Systems I“, „System Dynamics and Automatic Control Systems II“

4 Form of examination

Module exam:

- Module exam (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Study achievement, Optional, Weighting: 100 %)

7 Usability of the module

MSc ETiT, MSc MEC, MSc iST

8 Grade bonus compliant to §25 (2)

9 References

Handouts will be distributed at start of the project (e.g. hints for writing project documentation, etc.)

Courses

Course Nr. 18-ko-2130-pj	**Course name** Project Course Practical Application of Mechatronics	
Instructor M.Sc. Julian Zeiß, Prof. Dr.-Ing. Ulrich Konigorski	**Type** Project seminar	**SWS** 4

Module name Computational Electromagnetics and Applications III					
Module nr. 18-dg-2020	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German/English			**Module owner** Prof. Dr.-Ing. Herbert De Gersem		

1	**Teaching content** Finite Difference, Finite Volume and Finite Element Methods for the solution of Maxwell equations in the time domain. High order Discontinuous Galerkin methods. Stability and convergence analysis. High performance computing. Particle based simulations for beams and plasmas.
2	**Learning objectives** Students lern the theoretical basis of advanced simulation techniques for time dependent electromagnetic fields. Furthermore, the lecture mediates practical skills for the implementation, analysis and application of simulation codes for common problems of Electrical Engineering
3	**Recommended prerequisites for participation** Maxwell's equations, infinitesimal calculus, vector calculus. Basics of differential equations and linear algebra
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture slides, matlab scripts, various literature sources

Course Nr. 20-00-0186-iv	**Course name** Optimization of static and dynamic systems		
Instructor		**Type** Integrated course	**SWS** 6

Module name Computer Aided Design (CAD)					
Module nr. 16-07-5020	**Credit points** 4 CP	**Workload** 120 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr. Reiner Anderl		

1	**Teaching content** Parametric 3D CAD systems, PDM systems, 3D hand sketching, geometric models, design of single parts with geometric elements, features and parametrics, assembly modeling, bill of materials, tolerances and surface fits, technical product documentation, drawing standards, product development in teams.
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Understand and apply parametric 3D CAD and PDM systems. 2. Design parametric single parts and complex assemblies. 3. Create engineering drawings for documentation. 4. Manage generated product data using PDM processes. 5. Work on and solve advanced tasks in virtual product development in teams.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Special form, Default RS) Product modelling project (continuous assessment procedure: Reports on component modeling, assembly.
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Special form, Weighting: 100 %)
7	**Usability of the module** Bachelor MB Pflicht Bachelor WI-MB WP Projekte Bachelor Mechatronik
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture notes can be purchased in the institute's secretarial office. Exercises and background theory are available on the website.

Module nr. 16-23-5050	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Summer term
Language English			**Module owner** Prof. Dr.-Ing. Jürgen Beyer		

1	**Teaching content** Navigation principles, Earth models, Coordinate systems, Radio navigation, Basics and instruments (ADF, VOR, DME, ILS), dead reckoning, functional principles and error analysis, satellite navigation, Introduction into GPS, signal description and measurement principles, Dilution of Precision (DoP), Differential GPS, Augmentation systems (RAIM, GIC, WAAS, LAAS, EGNOS).
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Explain the physics associated with the navigation of the earth. 2. Classify common coordinate systems and map projections. 3. Judge the methods of radio, coupling, and satellite navigation with respect to performance and applications.
3	**Recommended prerequisites for participation** Recommanded: Control Engineering
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS) Oral exam (in a group with 3 students) 60 min
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** WPB Master MPE III (Wahlfächer aus Natur- und Ingenieurwissenschaft) WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik) Master Mechatronik
8	**Grade bonus compliant to §25 (2)**
9	**References** Course notes available.

Module name Machine Learning and Deep Learning for Automation Systems					
Module nr. 18-ad-2100	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

- Concepts of machine learning
- Linear methods
- Support vector machines
- Trees and ensembles
- Training and assessment
- Unsupervised learning
- Neural networks and deep learning
- Convolutional neuronal networks (CNNs)
- CNN applications
- Recurrent neural networks (RNNs)

2 Learning objectives

Upon completion of the module, students will have a broad and practical view on the field of machine learning. First, the most relevant algorithm classes of supervised and unsupervised learning are discussed. After that, the course addresses deep neural networks, which enable many of today's applications in image and signal processing. The fundamental characteristics of all algorithms are compiled and demonstrated by programming examples. Students will be able to assess the methods and apply them to practical tasks.

3 Recommended prerequisites for participation

Fundamental knowledge in linear algebra and statistics
Preferred: Lecture “Fuzzy logic, neural networks and evolutionary algorithms”

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 7 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Module name Hands-On HCI					
Module nr. 20-00-1116	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Arjan Kuijper		

1	**Teaching content** You might have previously heard of or even tried out virtual/augmented reality, 3D printing, wearable or tangible user interfaces. The area of Human-Computer Interaction covers all these exciting topics and offers an opportunity to build new prototypes and try them out with people in the user studies. If you would like to better connect theory and practice in the area of Human-Computer Interaction (HCI), then the course of Hands-On Human-Computer Interaction (Hands-On HCI) is for you. The goal of the class is to walk you through the whole research cycle in HCI. It can play a great preparation role for your future bachelor/master thesis in HCI or lay a first brick in your academic path after finishing your studies.
2	**Learning objectives** After completing the module, students can - differentiate between and apply three approaches to HCI research. - distinguish three types of empirical research. - effectively read a scientific publication. - differentiate between types of HCI contributions. - Formulate and define research questions, hypotheses and experimental variables. - create a suitable study design based on the previously developed research questions. - conduct a study using quantitative and qualitative methods to collect data. - Analyze, evaluate and interpret quantitative data on the basis of statistical methods. - Analyze and interpret qualitative data on the basis of grounded theory. - Understand the peer review process and write reviews for a scientific publication. - Understand and apply evaluation techniques with and without users. - Write the knowledge gained as a scientific publication and present it to a specialist audience.
3	**Recommended prerequisites for participation** Recommended: Human-Computer Interaction (TK2)
4	**Form of examination** Course related exam: • [20-00-1116-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1116-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

Module name Model Predictive Control and Machine Learning					
Module nr. 18-fi-2040	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language English			**Module owner** Prof. Dr.-Ing. Rolf Findeisen		

1	**Teaching content** *Lecture:* Introduction and basics of optimal control, Linear Quadratic Regulator (LQR) in discrete and continuous time, basics of model predictive control (cost functions, constraints, receding horizon), nominal model predictive control for linear systems, robust and stochastic model predictive control, model predictive control of nonlinear systems, combination of machine learning and model predictive control. *Group work:* In a group project, the students will apply the learned. The group project evolves a review of state of the art for the selected task, the selection of suitable model predictive control approach, and the implementation using python/Matlab. It includes a project report and is concluded by a project presentation.
2	**Learning objectives** The students will understand the basics concepts of model predictive control. Furthermore, they are familiarized with machine learning approaches that can support model predictive controllers and possibly enhance the controller performance. This entails knowledge about theoretical questions such as stability in the nominal case, as well as extensions to the case of uncertain and disturbed systems. The students are enabled to design and implement model predictive controllers based on first principle/physical or data-based/machine learning based models. This entails the setup and design of the control structure as well as the tuning and identification of suitable parameters and cost functions of the controller.
3	**Recommended prerequisites for participation** Basic concepts of control theory. Fundamentals of linear algebra, differential, and difference equations. Knowledge in Python and/or Matlab.
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS) The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc etit, BSc/MSc iST, MSc MEC, MSc WI-etit
8	**Grade bonus compliant to §25 (2)** Yes. Possibility to improve the grade by a group work/exercise.

	Instructor		**Type** Integrated course	**SWS** 4

Module name Physical Layer Security in Wireless Systems					
Module nr. 20-00-0745	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Dr.-Ing. Michael Kreutzer		

1	**Teaching content** Physical layer security techniques promise information theoretic security on the physical layer for wireless communication. This integrated course discusses the theory and practice of physical layer security. The underlying theory is introduced and the application of these fundamentals towards practical solutions is discussed. Attacks against (practical) physical layer security techniques are presented. Theoretical and practical exercises as well as the presentation of selected recent research results by seminar talks of students further deepen the understanding of the subject matter. Course contents: - Properties of the physical layer - Fundamentals of information theoretic security and delineation from cryptography - Physical layer security techniques (such as cooperative jamming, orthogonal blinding, zero-forcing, interference alignment, key extraction) - Practical aspects of physical layer security techniques - Practical implementations of physical layer security techniques using software-defined radios - Selected current approaches to physical layer security
2	**Learning objectives** After successfully attending the course, students have a basic theoretical knowledge and an in-deep practical knowledge in the area of physical layer security. They are able to describe the most important information-theoretic basics as well as theory and practice of physical layer security techniques. They are able to analyze practical physical layer security techniques and describe their weaknesses. Students have competencies in the practical realization of physical layer security techniques using software-defined radios. They can independently acquire the current state of research on physical layer security and present the aquired knowledge in a comprehensible fashion.
3	**Recommended prerequisites for participation** Basics Mobile Networking
4	**Form of examination** Course related exam: • [20-00-0745-iv] (Technical examination, Oral/written examination, Default RS)

Language German/English			**Module owner** Prof. Dr.-Ing. Matthias Hollick		

1	**Teaching content** The integrated course Secure Mobile Systems covers the topic area of security in wireless and mobile networks and communication systems. Fundamental topics will be enriched by current research. Course contents: - Security analysis and modelling of security threats in mobile and wireless systems - Selected attacks and security mechanisms specific to mobile and wireless systems - Security in wireless sensor networks - Security in wireless mesh networks - Threats against privacy and privacy-preserving mechanisms in mobile and wireless systems - Security in cellular networks (GSM, UMTS, LTE) - Security on the physical layer in mobile and wireless systems - Selected research topisc in mobile and wireless systems
2	**Learning objectives** After successfully attending the course, students have a specialized knowledge in the domain of security with emphasis on mobile, distributed, wireless communication networks. Students are able to apply and transfer the most important fundamentals from IT security, cryptography and traditional network security to the field of mobile systems. Students obtain a thorough understanding of security mechanisms on the different network layers (application layer, transport layer, network layer, link layer, physical layer). As a result, they are able to thoroughly discuss the characteristics and principles in the area of mobile system security and exhibit detailed theoretical and practical knowledge in this field.
3	**Recommended prerequisites for participation** Grundlagen der Netzsicherheit und der Mobilen Netze

1	**Teaching content** The Lab Exercise on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile networks and wireless communications as well as the combination of these. Goal is the solving of a given problem by implementation in software or hardware/software in a team. Course contents: - Solving of a problem in the area of communication networks, IT security, mobile networks and wireless communications - Survey on solution alternatives and discussion of pros and cons - Conception of a software architecture or a combined hardware-software architecture - Software/hardware design for the target platform - Prototypical realization on the target platform - Evaluation of the system with respect to performance aspects - Documentation of the implemented solution
2	**Learning objectives** After successfully attending the course, students have aquired the ability to solve problems in the area of secure mobile networking using software technology. The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile netwokrs and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. Students are able to document the developed software artefacts and to present the project progress and outcomes.
3	**Recommended prerequisites for participation** Successfull participation in an lecture of SEEMOO.
4	**Form of examination** Course related exam: • [20-00-0552-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0552-pr] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

9	**References** Will be given in lab.

Courses

Module name Project on Secure Mobile Networking					
Module nr. 20-00-0553	**Credit points** 9 CP	**Workload** 270 h	**Self study** 180 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. rer. nat. Karsten Weihe		

1	**Teaching content** The Project on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile netwokrs and wireless communications as well as the combination of these. Goal is to independently carry out a development project in a team. Course contents: - Independent solving of a development project in the area of communication networks, IT security, mobile netwokrs and wireless communications - Project planning and project management - Survey on solution alternatives and discussion of pros and cons - Conception of a software architecture or a combined hardware-software architecture - Software/hardware design for the target platform - Prototypical realization on the target platform - Evaluation of the system with respect to performance aspects - Documentation of the implemented solution as well as extensive documentation of the project management
2	**Learning objectives** After successfully attending the course, students have aquired the ability to solve complex problems in the area of secure mobile networking using software technology. To this end, the students are able to independently define, manage and carrry out a project. The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile netwokrs and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. The students are able to document the project planning and management, the developed software artefacts and to present the project progress and outcomes.
3	**Recommended prerequisites for participation** Successfull participation of an lecture of SEEMOO.
4	**Form of examination** Course related exam: • [20-00-0553-pp] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0553-pp] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module**

Courses

Course Nr.	**Course name**		
20-00-0362-iv	Formal Methods for Information Security		
Instructor		**Type**	**SWS**
		Integrated course	6

Module name Network Security					
Module nr. 20-00-0512	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Dr.-Ing. Michael Kreutzer		

1 Teaching content

The integrated course Network Security covers the principles and practice of computer and telecommunication network security with particular emphasis on Internet security. After transferring the fundamentals of IT security and cryptography to the networking domain, we follow a top-down approach to network security. Starting with the application layer, the course provides a detailed discussion of network security principles and protocols. In addition to well known mechanisms, selected recent developments in the area of network security will be examined.

Course contents:
- Network security: introduction, motivation, and challenges
- Fundamentals: a reference model for network security, security standards for networks and the Internet, security threats, attacks, services, and mechanisms
- Cryptographic foundations for networking security: symmetric crypto and its use in networks, public-key crypto and its use in networks, support functions to implement network security
- Application layer security
- Transport layer security
- Network layer security
- Link layer security
- Physical layer security and physical security
- Operational network security: firewalls, intrusion detection systems
- Selected topics in network security

2 Learning objectives

After successfully attending the course, students have aquired an in-deep knowledge in the domain of communication network security with emphasis on Internet security. Students are able to apply and transfer the most important fundamentals from IT security and cryptography to the field of communication networks. Students are able to distinguish the most important basic techniques for securing communication networks. They have a thorough understanding of security mechanisms on the different network layers (application layer, transport layer, network layer, link layer, physical layer). As a result, they are able to thoroughly discuss the characteristics and principles in the area of network security and exhibit detailed theoretical and practical knowledge in this field. Additionally, students are able to describe recent developments in the area of network security (e.g. peer-to-peer security, mobile network security, etc.). The exercise deepens the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.

3 Recommended prerequisites for participation

Knowledge in the area IT Security, Introduction to Cryptography and Communication Networks

4 Form of examination

Course related exam:
- [20-00-0512-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:
- [20-00-0512-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

	B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.

1	**Teaching content**				

1. Security Goals
1. Confidentiality
2. Integrity
3. Authenticity of Data
4. Entity Authentication/Identification
5. Non-repudiation
6. Availability
7. Other Goals
2. Public Key Cryptography
1. Encryption (symmetric, assymetric, hybrid, cryptosystems, key exchange, performance, security, computational problems)
2. Cryptographic Hash Functions
3. Message Authentication Codes
4. Digital Signatures (performance, standards)
3. Certificates
1. X.509 Public Key Certificates (properties, content, extensions)
2. PGP
3. WAP Certificates
4. Attribute Certificates
4. Trust Models
1. Direct Trust (fingerprints, examples of)
2. Web of Trust (key legitimacy, owner trust, trusted introducers)
3. Use of PGP
4. Hierarchical Trust (trusted list, common root, cross-certification, bridge)
5. Private Keys
1. Software Personal Security Environments (PKCS#12, Java Keystore, application specific)
2. Hardware Personal Security Environments (smart cards, hardware security modules, java cards)
3. Private Key Life-cycle
6. Revocation
1. Revocation (reaons for, requirements, criteria)
2. Certificate Revocation Lists
3. Delta Certificate Revocation Lists
4. Other Certificate Revocation Lists (over-issued, indirect, redirect)
5. OCSP
6. Other Revocation Mechanisms (NOVOMODO)
7. Policies
1. Certificate Life-cycle
2. Certificate Policy and Certification Practice Statement
3. Set of Provisions
8. Validity Models
1. Shell Model
2. Modified Shell Model
3. Chain Model
9. Certification Path Validation
10. Trust Center
1. Registration Authority (registration protocols, proof-of-possession, extended validation certificates)
2. Certification Authority
3. Certificate Management Authority
11. Certification Paths and Protocols
1. Construction
2. LDAP and other methods
3. SCVP
4. Timestamping
5. Long Term Archiving Signatures

2	**Learning objectives** After attending the lecture Public Key Infrastructures, the students are able to - understand the IT security goals and the cryptographic primitives to realize these goals. - understand and explain the foundations of Public Key Infrastructures, in particular the different components (e.g., private keys, certificates, policies), actors (e.g., Trust centers, key owners) and processes (e.g., certificate request, certificate issuance, validation of certificates, revocation). - understand, explain and apply the underlying theoretical models (e.g., trust models, validity models. - use Public Key Infrastructures in practice (e.g., for Email signing and encryption, validation of the authenticity of web sites).
3	**Recommended prerequisites for participation**
4	**Form of examination** Course related exam: • [20-00-0063-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Security of Critical Infrastructures					
Module nr. 20-00-0720	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Dr.-Ing. Michael Kreutzer		

1	**Teaching content** Critical infrastructures are organisations or institutions of major importance to the state community, their failure or impairment would result in long-term supply shortages, significant disruption to public security or other dramatic consequences (BMI, 2009). The lecture focuses on different critical infrastructures and their security challenges. After an introduction into some basics, speakers from research institutions, companies, authorities or operators of critical infrastructures are lecturing on specific facets of the topic. A self-study of selected articles complements the lectures. In the past years, speakers from the German Bundestag, the Federal Office of Civil Protection and Disaster Assistance (BBK), the Federal Office for Information Security (BSI), the German Federal Agency for Technical Relief (BBK), the Hessen Cyber Competence Center (Hessen 3C), Siemens AG, Deutsche Bahn, Deutsche Börse, German Air Traffic Control, as well as from universities and research institutions have given lectures.
2	**Learning objectives** After successfully attending the course, students are familiar with the most important IT security problems in critical infrastructures. They understand techniques that allow to secure critical infrastrures and are able to apply them in different sectors (such as the smart grid, the transportation or the telecommunications sectors).
3	**Recommended prerequisites for participation** Computersystemsicherheit
4	**Form of examination** Course related exam: • [20-00-0720-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Courses

	Course Nr. 20-00-0720-iv	**Course name** Critical Infrastructure Protection		
	Instructor Dr.-Ing. Michael Kreutzer		**Type** Integrated course	**SWS** 2

Module name Seminar on Networking, Security, Mobility, and Wireless Communications					
Module nr. 20-00-0582	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Matthias Hollick		

1	**Teaching content** The Seminar on Networking, Security, Mobility, and Wireless Communications covers current research in the given topic areas. Under supervision of the tutors, the seminar imcludes studying, critically analyzing and discussing, summarizing, and presenting selected research articles. Deliverables are a short presentation, a final presentation, and a seminar paper. Course contents: - Indepentent exploration of a topic in the area of networking, security, mobility, and wireless communications (typically in english) - Own, enhanced literature study, gudided by tutor - Interpretation and classification of the literature study, gudided by tutor - Preparation of an introductory talk as well as a final talk including presentation slides, gudided by tutor - Presentation of both talks for a heterogenous audience (experts/non-experts) - Technical discussion after the talks - Feedback to the speakers and the talks (including presentation skills) and technical content
2	**Learning objectives** After successfully attending the course, students are able to work in a scientific manner under guidance. They know the fundamental techniques for scientific literature work and can apply them to a well-defined topic area. They have aquired intermediate knowledge on selected mechanisms, methodologies as well as applications for the investigated topic area. Students can present this aquired knowledge to a heterogeneous audience and explain the technical details of the investigated topic.
3	**Recommended prerequisites for participation** Successfull participation in a lecture of SEEMOO.
4	**Form of examination** Course related exam: • [20-00-0582-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

1	**Teaching content** The students will gain an insight into the challenges of multimedia security and the established solution approaches. These include concepts such as media integrity, confidentiality and authenticity. The students already know the procedures used in digital watermarking, robust hashing, partial encryption, multimedia forensics and DRM. Choosing the appropriate solution from a full panoply of solution mechanisms they will be able to respond optimally to the multimedia security challenges depending on the respective requirements. - Partial encoding procedures for video and audio to ensure confidentiality and authenticity - Digital watermarks for images and audio - areas of application, methods and procedures - Digital Rights Management and Copyright protection procedures - Visual cryptography Besides discussing different algorithms, i.e. their possibilities, limitations and weaknesses, the commercial and societal aspects of protective measures will also be part of the lecture.
2	**Learning objectives** The students get an overview of the challenges posed by multimedia security as well as known solutions. This includes concepts of digital watermarks, robust hashes, partial encryption, multimedia forensics, and DRM. The student is able to address challenges of multimedia security by applying appropriate solutions.
3	**Recommended prerequisites for participation** Basic knowledge in Multimedia-Formats and IT Security.
4	**Form of examination** Course related exam: • [20-00-0093-iv] (Technical examination, Oral/written examination, Default RS)

They learn to judge the significance and limitations of security models and security proofs for practical purposes.
3	**Recommended prerequisites for participation** Einführung in die Kryptographie
4	**Form of examination** Course related exam: • [20-00-0993-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0993-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree progams.
8	**Grade bonus compliant to §25 (2)**
9	**References**

Courses

Course Nr. 20-00-0993-iv	**Course name** Real World Cryptography	
Instructor Prof. Dr. techn. Stefan Katzenbeisser	**Type** Integrated course	**SWS** 4

Module name Practical Lab on System and IoT Security					
Module nr. 20-00-0615	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Dr.-Ing. Michael Kreutzer		

1	**Teaching content** In this practical course, the students deal with different aspects of smartphone security. The project tasks specifically target the open-source Android OS and comprise the following areas: - Design and implementation of selected software attacks (ethical hacking) - Design and implemenation of secure user apps - Modifications of the Android Middleware and Kernel to build security architectures - System programming in general
2	**Learning objectives** After successfully completing this lab students will have gained knowledge and hands-on expercience with security mechanisms in modern smartphone operating systems. Futhermore they gain experience in system programming in general.
3	**Recommended prerequisites for participation** - Basics operating systems - Knowledge in C++ and Java
4	**Form of examination** Course related exam: • [20-00-0615-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0615-pr] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**
9	**References** Will be given in lab.

Language			**Module owner**		
English			Prof. Dr. techn. Stefan Katzenbeisser		

1	**Teaching content** In this lab we will learn the basic and advanced aspects of network security. We will review the foundational protocols, such as BGP and DNS, infrastructure modules, such as routers, switches and firewalls, and will also discuss applications security. We will discuss and demonstrate attacks and defences. Each of the students will receive a specific topic on which they will work during the semester, and on which they will be guided.
2	**Learning objectives** At the end of the course the students will acquire a good knowledge in Network security, and in particular in topics on which they will prepare projects. The grade is based on the quality of the submitted project.
3	**Recommended prerequisites for participation** The students should have a background in networking and in operating systems - these are prerequisite courses.
4	**Form of examination** Course related exam: • [20-00-1018-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1018-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

Module nr. 20-00-0969	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. techn. Stefan Katzenbeisser		

1	**Teaching content** - Protection in Networked Systems: background, motivation, challenges - Trust (Computational Trust): models and mechanisms - Trust (Computational Trust): application in PKI, Cloud Computing, Reputation Systems, and Web Services - Trust: regret management and device comfort - Privacy: privacy definitions, models, data anonymity, communication anonymity - Privacy & Trust: privacy-preserving trust models, mechanisms, and application to IDM - Security & Economics - Resilience: models, network intrusion detection systems, collaborative intrusion detection systems, honeypots - Resilient networks
2	**Learning objectives** The integrated lecture Protection in Networked Systems ? Trust, Resilience, and Privacy covers the topics of computational trust, resilient and anonymous networks, and collaborative defense mechanisms. By attending this course, the students will be able to understand the problems and solutions in the context of networked systems. The course content will consider the concept of End-to-End systems emphasizing on users, devices, networks, and applications or services.
3	**Recommended prerequisites for participation** - Trust and Reputation for Service-Oriented Environments: Technologies For Building Business Intelligence And Consumer Confidence, Elizabeth Chang, Tharam Dillon, and Farookh K. Hussain, 374 pages, 2006. ISBN: 978-0-470-01547-6 - On anonymity in an electronic society: A survey of anonymous communication systems, Matthew Edman and Bülent Yener, ACM Computing Surveys, Vol. 42, Issue 1, 2009. - Taxonomy and Survey of Collaborative Intrusion Detection, Emmanouil Vasilomanolakis, Shankar Karuppayah, Max Mühlhäuser, Mathias Fischer, ACM Computing Surveys, Vol. 47 Issue 4, 2015. - Selected book chapters and scientific publications
4	**Form of examination** Course related exam: • [20-00-0969-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0969-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Module nr. 20-00-1022	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Stefan Katzenbeisser		

1	**Teaching content** The Seminar on Protection in Infrastructures and Networks is a cycle of seminars where students are given the chance to read, analyze and summarize current scientific publications. The topics are related to the areas of: - Trust - Privacy - Resilience in the domain of infrastructures and networks.
2	**Learning objectives** Students participating in the seminar will have the opportunity to learn and conduct research in the direction of these topics. Your task will be to understand state-of-the-art scientific publications in order to explain their contributions. Furthermore, you are expected to write a survey in relation to the topic assigned to you.
3	**Recommended prerequisites for participation** Basic knowledge about it-security and distributed systems. Lectures: Computersystemsicherheit (CSS) Computer-Netzwerke und verteilte Systeme (CNuvS)
4	**Form of examination** Course related exam: • [20-00-1022-se] (Study achievement, Oral/written examination, Default RS)

Cryptographic Protocols					
Module nr.	**Credit points**	**Workload**	**Self study**	**Module duration**	**Module cycle**
20-00-1032	6 CP	180 h	120 h	1 Term	Every 2. Semester
Language			**Module owner**		
English			Prof. Dr. techn. Stefan Katzenbeisser		

1	**Teaching content** Cryptographic protocols allow parties with potentially conflicting interests to jointly perform certain tasks. This course covers basic and advanced constructions for cryptographic protocols and their applications, including Commitments, Secure Coin Flipping, Zero-Knowledge Proofs, Mixnets, Anonymous Credentials, Private Information Retrieval, Secure Multiparty Computation, and Hardware-assisted Cryptographic Protocols.
2	**Learning objectives** Students know basic and advanced cryptographic protocols, can assess and compare their efficiency and security, and know their basic applications.
3	**Recommended prerequisites for participation** Basic knowledge in cryptography is strongly recommended, e.g., by successfully completing the course "Introduction to Cryptography".
4	**Form of examination** Course related exam: • [20-00-1032-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1032-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Module name Mobile Security					
Module nr. 20-00-0652	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Ahmad-Reza Sadeghi		

1	**Teaching content** In this seminar different security aspects of mobile devices (especially smartphone) will be analyzed and discussed. Students will process, summarize and evaluate a number of current scientific publications for a certain topic in form of an essay. Additionally, each student will present his work in front of the group at the end of the semester. Possible topics include: - Security models of current smartphone operating systems (e.g. Android, iOS, Windows Phone, MeeGo, Symbian, RIM) - Security analysis and comparison of current app store models - Usage of mobile devices in enterprises - Security extensions for Android - Kernel security - Application security (e.g. mobile malware and runtime attacks) - Privacy aspects in mobile devices - Security of mobile networks
2	**Learning objectives** This seminar covers several topics in the area of mobile security with the focus on smartphone security. Through this course students will gain detailed knowledge on the security and privacy aspects of mobile operating systems, devices, infrastructures and end-user applications. Moreover, they learn to examine current research in this area, to dive into a scientific topic and present their results in a short paper as well as an oral presentation.
3	**Recommended prerequisites for participation** Grundlagen der Informatik
4	**Form of examination** Course related exam: • [20-00-0652-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0652-se] (Study achievement, Oral/written examination, Weighting: 100 %)

Language German/English			**Module owner** Prof. Dr. techn. Stefan Katzenbeisser		

1	**Teaching content** The lab course offers development projects relevant to the current research of the research group “Science and Technology for Peace and Security” (PEASEC). In addition to a broad overview, students will gain insight in a specific area of development. These topics are linked to the specializations of the members of the re-search group and provide the students with technical and scientific insight. The topics will be worked on in small groups. Examples for topics are available at www.peasec.de/lehre
2	**Learning objectives** Acquiring the qualification for solving a practical task in a team or by oneself and presenting the results, such as: - Resolution of an issue in the domain of peace, security and crisis informatics - Requirements engineering and empirical studies - Research of solution alternatives and assessment of their (dis)advantages - Design, prototypical implementation and maintenance of innovative applications - Evaluation of existing applications with regard to different assessment criteria - Documentation of the developed solution
3	**Recommended prerequisites for participation** Foundations of Computer Science/Functional and Object-oriented Programming Concepts
4	**Form of examination** Course related exam: • [20-00-1020-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1020-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

Further literature will be provided in the course dependent on the selected topic.

Courses

	Course Nr. 20-00-1020-pr	**Course name** Lab Peace-, Security and Crisis Informatics		
	Instructor Prof. Dr. techn. Stefan Katzenbeisser		**Type** Internship	**SWS** 4

Module name Crisis, Security and Peace Technologies					
Module nr. 20-00-1019	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. techn. Stefan Katzenbeisser		

1 Teaching content

During the course of this seminar advanced theories and subjects from the field of "Science and Technology for Peace and Security" (PEASEC) will be developed. Based on the introduction and repetition of the princi-ples in scientific research, contemporary project topics which are related to PEASEC research will be offered by us and addressed by students applying scientific methods. During the semester scientific articles ("pa-pers") will be developed and presented. As usual in scientific work, students will constructively review each other's work in a peer-review process. Subsequently, the papers will be revised for the finalization and sub-mission.

EXEMPLARY THEMATIC AREAS
- Safety-critical human-computer interaction, social media and collaborative technologies in conflict and crisis situations, usable security and privacy
- Information technology for peace and security, information warfare, manipulation of opinions, fake news, cyber war, cyber peace, dual-use in computer science, conscientious digitalization, computer science and society
- Resilient IT-based (critical) infrastructures, particularly communication, agriculture, energy

Topics for the current semester are available at www.peasec.de/lehre

PROCEDURE:
- Technical introduction including the presentation and assignment of topics
- Writing and submitting a short exposé
- Methodological lecture
- Short presentation of the own topic and constructive feedback
- Submission of a first complete version of the paper
- Assessment within a students‘ peer-review process
- Final submission of the paper
- Grading

A mandatory introduction („kick-off“) is the first date, the mandatory methodological lecture is the second date. The assignment of topics and formation of groups will take place collaboratively during the kickoff and, if necessary, in the following week.

2 Learning objectives

- Autonomous familiarization with a topic in the field of peace, conflict and security research from the per-spective of computer science
- Further autonomous literature research, interpretation and classification
- Preparation and presentation of the topic to a heterogenous audience and subsequent expert discussion
- Writing a scientific article
- Assessment of scientific articles („peer-review“) with constructive feedback
- Knowledge of the procedures of academic research and publication

3 Recommended prerequisites for participation

Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies; basic knowledge in the topics of PEASEC

4 Form of examination

Course related exam:
- [20-00-1019-se] (Study achievement, Oral/written examination, Default RS)

5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1019-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

1	**Teaching content** This course is aimed at students who have attended the lecture Cryptocurrencies and want to understand and examine some aspects of this topic in more detail. It provides a platform to check novel applications based on Blockchain technology for their feasibility and usefulness. Complex cryptographic systems and ideas from the lecture Cryptocurrencies should be understood in team work and implemented in a decentralized system. The students are asked to develop a project plan and outline, which should be implemented over the course of the semester. The students get first experiences with the implementation of a more complex development project.
2	**Learning objectives** Participants of this course will learn about the technical and practical implications of distributed cryptographic systems. These include first hands-on experiences in the following areas: • Development of smart contracts and distributed applications • Communication of systems through decentral peer-to-peer networks • Development of software using cryptographic building blocks • Security and anonymity of users of cryptographic currencies • Possible attacks on smart contracts and cryptocurrencies
3	**Recommended prerequisites for participation** This course is directed at students that finished the cryptocurrencies lecture with good marks and programming skills.
4	**Form of examination** Course related exam: • [20-00-1031-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module nr. 20-00-1025	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. techn. Stefan Katzenbeisser		
1	**Teaching content**				

	This course provides a sound and practice-oriented introduction and an overview of the foundations, meth-ods, and applications of human-computer-interaction (HCI) in the context of security, emergencies, crises, disasters, war, and peace. Addressing this, interactive, mobile, ubiquitous and cooperative technologies, as well as social media, are presented. Here, classical topics such as usable (IT) security, industry 4.0, civil pro-tection, medicine, and automotive, as well as augmented reality, crowdsourcing, shitstorm management, so-cial media analytics and cyberwar all find their place. Methodologically, the spectrum from usable safety to usable security engineering is covered from analysis through design to evaluation. CONTENT: - Foundations and Methods (Usable Safety; Usable Security; Analysis, Design, Implementation, Evaluation; Law, Ethics and Culture) - Safety-critical Interactive Systems (Business Information Systems, Crisis Management Systems, Medical Engineering, Warning Systems and Assistance Systems) - Safety-critical Cooperative Systems (Social Media, Cooperative Systems, Voluntary Participation, Peace and Security) STRUCTURE: Part I: Introduction and Overview Part II: Foundations and Methods - Usable Safety (Usable Safety-Engineering of Safety-critical Interactive Systems, Usability-Engineering and User Experience of Safety-critical Systems, Quantitative Evaluation of Human-Computer-Interaction) - Usable Security (Human Factors in Security, Tools for Usable (Cyber-)Security, Usable Solutions for Data Protection) - Law, Ethics and Culture (Selected Legal Implications for Safety-critical IT, Ethical, Legal and Social Implica-tions (ELSI), International and Intercultural Aspects of Safety-critical Systems) Part III: Safety-critical Interactive Systems - Business Information Systems (Critical Infrastructures and Business Continuity Management, Safety-critical Human-Machine-Interaction in Industry 4.0, IT-Systems for Crisis Management: Requirements, Functionalities and Categories) - Crisis Management and Medical Engineering (IT-Support of Standard and Exceptional Operations of Emer-gency Services, Safety-critical Human-Machine-Interaction in Medical Technology, Warnings of the Population in Disaster Situations) - Warning Systems and Assistance Systems (Human Factors in the Development of Driver Assistance Sys-tems, From Driver Information to Driver Assistance and Autonomous Driving) Part IV: Safety-critical Cooperative Systems - Social Media (Social Media in Emergency Situations, Crises and Catastrophes, Social Media Analytics for Companies and Authorities, Corporate Shitstorm Management: Confrontations in Social Media) - Cooperative Systems for Mission Situations (Resilience through Cooperative Technologies, IT-based Pro-cess Support for Safety of Major Events, Situational Awareness in Augmented and Virtual Reality Simulation Games) - Technology for Voluntary Participation (Humanitarian Aid and Concepts of Digital Aid, Involvement of Emergent Volunteers for the Mastery of Loss Events, Mobiles Crowdsourcing for the Integration of Volun-teers) - Peace and Security (Computer Science for Peace and Security, Social Media in Political Conflict Situations) Part V: Outlook: The Future of Safety-critical Human-Computer-Interaction Details for the current semester can be found at www.peasec.de/lehre
2	**Learning objectives**

	- Understanding of safety-critical HCI and the underlying disciplines HCI as well as crisis and security management - Overview of selected basics and methods of safety-critical HCI (usable safety, usable security, analysis, design, implementation, evaluation, law, ethics, and culture) - Orientation in application domains and fields - Knowledge about safety-critical interactive systems (business information systems, crisis management sys-tems, medical engineering, warning and assistance systems) - Knowledge about safety-critical cooperative systems (social media, cooperation systems, voluntary partici-pation, peace, and security)
3	**Recommended prerequisites for participation** Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies
4	**Form of examination** Course related exam: • [20-00-1025-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1025-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

1 Teaching content

Technological and scientific progress, especially the rapid development in information technology (IT), plays a crucial role regarding questions of peace and security. This course addresses the significance, potentials and challenges of IT for peace and security. For this purpose, the course offers an introduction to peace, conflict, and security research, thereby focusing on natural-science, technical and computer science perspec-tives. It thereby sheds light on cyber conflicts, war and peace, cyber arms control, cyber attribution and infra-structures as well as culture and interaction before an outlook is given.

CONTENT:
- Introduction to Natural-Science/Technical Peace Research and IT Perspectives of Peace, Conflict, and Secu-rity Research
- Cyber War, Espionage, Defense, Darknets, Critical Infrastructures, Cultural Violence
- Cyber Peace, Dual-Use, Confidence and Security Building Measures, Arms Control, Unmanned Systems, Verification, Attribution

STRUCTURE:
- Part I: Introduction und Foundations (Introduction and Overview, IT in Peace, Conflict and Security Research (Natural-Science/Technical Peace Research))
- Part II: Cyber War and Conflict (Information Warfare, Cyber Espionage and Cyber Defense, Darknets as Tools for Cyber Warfare)
- Part III: Cyber Peace (From Cyberwar to Cyberpeace, Dual-Use and Dilemmas of Cybersecurity, Confidence and Security Building Measures for Cyber Forces)
- Part IV: Cyber Arms Control (Arms Control and its Applicability to Cyberspace, Unmanned Systems: The Robotic Revolution, Verification in Cyberspace)
- Part V: Cyber Attribution and Infrastructures (Attribution of Cyber Attacks, Resilient Critical Infrastructures, Security of Critical Information Infrastructures)
- Part VI: Social Interaction (Safety and Security, Cultural Violence, Social Media and ICT Usage in Conflict Areas)
- Part VII: Outlook (The Future of IT in Peace and Security)

Characteristics for the current semester are available at www.peasec.de/lehre

2 Learning objectives

- Knowledge of basics of computer science for peace, conflict and security research
- Assessment of IT to promote or prevent peace and security
- Knowledge in the design and development of IT for peace

3 Recommended prerequisites for participation

Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies

4 Form of examination

Course related exam:
- [20-00-1026-iv] (Technical examination, Oral/written examination, Default RS)

1 Teaching content

In the lecture, an exemplary, fictitious organization is used to demonstrate how information security is established in all processes of the organization.

The following topics are considered, among others:
* Maturity level assessment regarding information security of the organization
* Capability Maturity Model Integration (CMMI) Framework
* Establishment of a Cyber Security Strategy
* Information Security Governance
* Establishment of an Information Security Management System (ISMS) according to ISO/IEC 27001:2013 and IT-Grundschutz
* Security Awareness within the organization
* Key Performance Indicator to measure information security
* Asset Management, information networks and process analyses
* Protection requirement analyses and business impact analyses
* Qualitative and quantitative risk management
* Risk analysis, treatment and monitoring processes
* Vulnerability Management (dealing with IT vulnerabilities in own and outsourced systems)
* Business Continuity Management (BCM)
* Business Continuity Planning (BCP)
* Secure IT operations, securing operational processes
* Secure development
* Securing cloud services
* Management of service providers
* Incident Management: securing, detecting and responding to security incidents
* Audit Management
* Review of compliance and governance

2 Learning objectives

The main objective of this course is to learn how IT and information security is managed in an organization, focusing on management rather than technical or formal IT security.

* Knowledge, contents and structures of an Information Security Management System (ISMS)
* Overview of common procedures regarding information security management, e.g. ISO 27001, IT-Grundschutz, NIST Cybersecurity Framework.
* Identification and protection requirement analysis of assets in the organization
* Knowledge of common risk management procedures
* Systematic assessment of information security in the organization using metrics
* Establishment of processes relevant to information security such as vulnerability management, BCM processes, incident management and audit management

3 Recommended prerequisites for participation

Attendance of the course "Computer Security" is recommended.

4 Form of examination

Course related exam:
- [20-00-1123-vl] (Technical examination, Oral/written examination, Default RS)

5	**Prerequisite for the award of credit points** Pass exam (100%)			
6	**Grading** Course related exam: • [20-00-1123-vl] (Technical examination, Oral/written examination, Weighting: 100 %)			
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.			
8	**Grade bonus compliant to §25 (2)**			
9	**References**			
Courses				
	Course Nr. 20-00-1123-vl	**Course name** Information Security Management		
	Instructor Prof. Ph.D. Sebastian Faust		**Type** Lecture	**SWS** 2

Module name Side-channel resilient cryptography					
Module nr. 20-00-1088	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Ph.D. Sebastian Faust		

1	**Teaching content** Cryptographic schemes are classically secure against black-box attacks, where an attacker exploits weaknesses of the underlying cryptographic algorithm. When cryptography is implemented in practice, so-called side-channel attacks are a further threat to their security. Most of cryptography can be broken by side-channel attacks and countless examples illustrate that almost all the devices that are in use today are affected by them. Starting in the late 1990s, when Kocher showed that smart cards can be broken using timing or power analysis attacks, there has been a plethora of different side-channel attacks been discovered. Most recently, examples such as Foreshadow illustrate that even advanced computing machinery is vulnerable to side-channel attacks. Leakage resilient cryptography is the discipline that formalises these practical attacks in order to use formal methods for demonstrating security against them. In particular, it defines new security models, so-called leakage models, that incorporate side-channel attacks into the classical security models, and design cryptographic schemes that are provable secure within them.
2	**Learning objectives** The goal of this seminar is reading the most influential papers on side-channel attacks and leakage resilient cryptography in order to: - Present and understand popular side channel attacks (e.g., power analysis attacks, timing attacks, foreshadow etc.) - Present and understand common countermeasures against side-channel attacks (e.g., constant time cryptography, randomized execution, masking schemes, algorithmic countermeasures, etc.) - Present security models in leakage resilient cryptography and the formal security analysis of side channel countermeasures (e.g., memory leakage models and computation leakage models)
3	**Recommended prerequisites for participation** The seminar is aimed at master students. Basic lecture IT security or basic knowledge in cryptography are recommended, but not mandatory.
4	**Form of examination** Course related exam: • [20-00-1088-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1088-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**

2.7 Optional Subjects AIS-VC: Visual Computing

Module name Capturing Reality					
Module nr. 20-00-0489	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** This course covers a broad range of techniques to capture and model our world with a focus on application in computer graphics and computer vision. This includes: - basic tools and calibration techniques required in capturing applications - capturing and modeling techniques for various object properties (such as geometry and reflectance) - basic set of relevant mathematical modeling and optimization techniques - implementation and practical application of several techniques
2	**Learning objectives** After successful completion of the course, students are able to analyze digitization and modeling problems for objects and scenes in computer graphics and computer vision as well as the underlying techniques. They are able to develop new setups, perform experiments and evaluate the results.
3	**Recommended prerequisites for participation** Recommended: Participation in lecture Graphische Datenverarbeitung I or Computer Vision I Basic knowledge in C/C++
4	**Form of examination** Course related exam: • [20-00-0489-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0489-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik B.Sc. Computational Engineering M.Sc. Computational Engineering M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Module name Computer Vision I					
Module nr. 20-00-0157	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** - Basics of image formation - Linear and (simple) nonlinear image filtering - Foundations of multi-view geometry - Camera calibration and pose estimation - Foundations of 3D reconstruction - Foundations of motion estimation from video - Template and subspace methods for object recognition - Object classification with bag of words - Object detection - Basics of image segmentation
2	**Learning objectives** After successfully attending the course, students are familiar with the basics of computer vision. They understand fundamental techniques for the analysis of images and videos, can name their assumptions and mathematical formulations, as well as describe the resulting algorithms. They are able to implement these techniques in order to solve basic image analysis tasks on realistic imagery.
3	**Recommended prerequisites for participation** Particiation of lecture Visual Computing is recommended.
4	**Form of examination** Course related exam: • [20-00-0157-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0157-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Module name Computer Vision II					
Module nr. 20-00-0401	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** - Computer vision as (probabilistic) inference - Robust estimation and modeling - Foundations of Bayesian networks and Markov random fields - Basic inference and learning methods in computer vision - Image restoration - Stereo - Optical flow - Bayesian tracking of (articulated) objects - Semantic segmentation - Current research topics
2	**Learning objectives** After successfully attending the course, students have developed a more in-depth understanding of computer vision. They formulate image and video analysis tasks as inference problems, taking challenges of real applications into account, e.g. regarding robustness. They solve the inference problem using discrete or continuous inference algorithms, and apply these to realistic imagery. They quantitatively evaluate the application specific results.
3	**Recommended prerequisites for participation** Participation of lecture Visual Computing and Computer Vision I is recommended.
4	**Form of examination** Course related exam: • [20-00-0401-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Geometric Methods of CAE/CAD					
Module nr. 20-00-0140	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. rer. nat. Oskar von Stryk		

1	**Teaching content** - parametric curve models - parametric surface models - topology and volumetric CAD models - CAD operations on surfaces - tesselation - approximation of curves and surfaces - finite element method and computational fluid dynamics - various applications from the area of CAD
2	**Learning objectives** After successfully attending the course, students understand the foundations of computer-aided methods for geometric modelling and simulation. They understand multiple parametric representations for curves and surfaces and are able to analyze and compare them. They know classical data structures and algorithms from computer aided design (CAD). They can use the presented techniques to model and visualize 3D geometry.
3	**Recommended prerequisites for participation** Basic knowledge in Computer Science.
4	**Form of examination** Course related exam: • [20-00-0140-iv] (Technical examination, Oral/written examination, Default RS)

Courses

Course Nr. 20-00-0537-pr	**Course name** Advanced Visual Computing Lab		
Instructor Prof. Dr.-Ing. Michael Gösele		**Type** Internship	**SWS** 4

Module name Virtual and Augmented Reality					
Module nr. 20-00-0160	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** This course starts to detail the principal concepts of Augmented and Virtual Reality in relation to Computer Graphics and Computer Vision. Starting from here basic principles, methods, algorithms as well as relevant standards are discussed. This includes - VR/AR specific requirements and interfaces - Interaction technologies (e.g. interaction with range camera technologies) - Rendering technologies (in particular real-time rendering) - Web-based VR and AR - Computer-Vision-based Tracking - Augmented Reality with range camera technologies - Augmented Reality on smartphone platforms The technologies will be illustrated and discussed with the results of actual research projects including in application fields „AR-maintenance support“ and „AR/VR based Cultural Heritage presentation“.
2	**Learning objectives** After successfully attending the course, students are familiar with the challenges and the requirements of Virtual and Augmented reality applications. They know the standards used for the specification of VR/AR-applications. In particular, the students understand the potential of Computer Vision based tracking and they can decide which methods can be applied in with environment.
3	**Recommended prerequisites for participation** Grundlagen der Graphischen Datenverarbeitung (GDV)
4	**Form of examination** Course related exam: • [20-00-0160-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Hardware Design for Video Processing					
Module nr. 20-00-0958	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Andreas Koch		

1	**Teaching content** These labs introduce the use of hardware accelerators to process realtime video streams. Such problems are highly relevant in industrial use cases, the labs will cover them in context of autonomous cars, using a Corner Detector as an example. The hardware accelerators will be implemented in a hardware description language, validated in simulation, and then integrated into a real FPGA-based hardware system. In contrast to other teaching and research activities at the ESA group, these labs will use VHDL as a language and FPGA technology by Altera, especially the Quartus and Qsys design tools. The labs start with introductory lectures covering the basics of VHDL and the tools, but participants are expected to become familiar with the details by self-study of the background material provided.
2	**Learning objectives** Successful participants are able to design hardware accelerators for realtime video processing in VHDL and validate them in simulation. They are able to map their designs to reconfigurable systems-on-chip using EDA/CAD tools. They are able to evaluate the resulting systems and use the observed characteristics to guide further hardware development.
3	**Recommended prerequisites for participation** Recommended: Successful completion of „Digital Design“, „Computer Organisation“, and „Architecture and Design of Computer Systems“, ideally also „Visual Computing“ and „Computational Engineering and Robotics“ or similar competencies obtained in other study programmes
4	**Form of examination** Course related exam: • [20-00-0958-pr] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0958-pr] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module**

Module nr. 20-00-0216	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** This seminar focuses on current research topics and the latest results in the areas of physically-based simulation, animation, real-time rendering and visualization. - participants independently familiarize themselves with the assigned seminar topic by working with the provided scientific papers (usually texts written in English) - classification and interpretation of the gathered research results - preparation of a textual summary and a slide-based presentation on the subject - presentation in front of an audience with mixed prior knowledge on the topic and discussion
2	**Learning objectives** Successful participation in the course enables students to get expertise by working with scientific papers. They can extract the essential aspects of the examined works and are able to concisely present them as textual form and presentation, targeting an audience with mixed prior experience on the subject. The students are able to actively participate in a scientific discussion on the presented topics.
3	**Recommended prerequisites for participation** GDV I, (GDV II)
4	**Form of examination** Course related exam: • [20-00-0216-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Module name Ambient Intelligence					
Module nr. 20-00-0390	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** The course will provide an overview of a new vision for Human-Computer-Interaction (HCI) in which people are surrounded by intelligent and intuitive interfaces embedded in the everyday objects around them. In specific the course addresses the emergence of Ambient Mobility and the ubiquitous, pervasive information access, retrieval and display on mobile devices. It will focus on understanding enabling technologies and studying applications and experiments, and, to lesser extent, it will adress the sociocultural impact. Additional topics of the lecture include system architectures for distributed systems, context awareness and management, user models and their implications, sensing and interaction in smart environments. The lecture discusses recent topics and research projects in the domain of Ambient Intelligence.
2	**Learning objectives** After successfully attending the lecture, the students will be able to describe technology trends and research results in the domain of Ambient Intelligence. The most important concepts to create smart environments - intelligent networks and objects, technologies for mobile, augmented reality, ubiquitous and pervasive information spaces, nomadic communications, real-time communication and related middle ware, embedded systems, sensor networks and wearable computing - can be discussed and classified. After completing the practical part, students will be able to plan and realize the different project phases required to develop an Ambient-Intelligence solution.
3	**Recommended prerequisites for participation** Master-Students Participation in lecture “Visual Computing“ and „Multimodale Interaktion mit intelligenten Umgebungen“
4	**Form of examination** Course related exam: • [20-00-0390-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)

Courses	

	Course Nr. 20-00-0155-iv	**Course name** Image Processing		
	Instructor		**Type** Integrated course	**SWS** 2

Module name Computer Vision in Engineering					
Module nr. 18-ad-2090	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr.-Ing. Jürgen Adamy		

1 Teaching content

A Basics

- Scene Representation 2D and 3D Geomtery
- Image Acquisition
  - Geometric Projections Camera Calibration
- Objective and Illumination
- Discrete 2D signals
  - Separability, Sampling
  - Transformation, Interpolation
  - Convolution, Correlation
  - Discrete Fourier Transformation

B Basics of Image Analysis

- Filtering
  - Basics2D Filter Design
  - Linear Filtering
  - Nichtlinear Filtering
- Image Decompositions
  - Multi-scale Representation
  - Pyramids
  - Filter Banks
- Image Features
  - Structure
  - Moments, Histograms

2 Learning objectives

After successful completion, the module teaches mathematical basics needed to solve computer vision problems in the field of engineering. The focus is on methods that are relevant for measuring and control tasks. Applications range from visual quality inspection, visual robotics, photogrammetry, visual odometry up to visually guided driver assistance etc.

The students should obtain a good understanding for the relations between the three-dimensional world and its two-dimensional projection onto the image plane of a camera. They also should learn about methods that exist to infer knowledge from the world given image data. They should develop some feeling for the different kinds of problems that arise in computer vision and how to choose an efficient solution in terms of algorithms.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

	Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc iST, MSc CE, MSc iST
8	**Grade bonus compliant to §25 (2)**

Module name Information Visualization and Visual Analytics					
Module nr. 20-00-0294	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1 Teaching content

This lecture will give a detailed introduction to the scientific topics of information visualization and Visual Analytics, and will cover current research areas as well as practical application scenarios of Visual Analytics.

- Overview of information visualization and Visual Analytics (definitions, models, history)
- Data representation and data transformation
- Mapping of data to visual structures
- Introduction to human cognition
- Visual representations and interaction for bivariate and multivariate Data, time series, networks and geographic data
- Basic data mining techniques
- Visual Analytics - Analytics reasoning - Data mining - Statistics Analytical techniques and scaling
- Evaluation of Visual Analytics Systems

2 Learning objectives

After successfully attending the course, students will be able to

- use information visualization methods for specific data types
- design interactive visualization systems for data from various application domains
- couple visualization and automated methods to solve large-scale data analysis problems
- apply knowledge about key characteristics of the human visual and cognitive system for information visualization and visual analytics

chose evaluation methods are used for specific situations and scenarios

3 Recommended prerequisites for participation

Interesse an Methoden der Computergrafik und Visualisierung

Die Veranstaltung richtet sich an Informatiker, Wirtschaftsinformatiker, Mathematiker in Bachelor, Master und Diplomstudiengänge und weiteren interessierten Kreisen (z.B. Biologen, Psychologen).

4 Form of examination

Course related exam:

- [20-00-0294-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:

- [20-00-0294-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

Module name Probabilistic Graphical Models					
Module nr. 20-00-0449	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Ph. D. Stefan Roth		

1	**Teaching content** - Refresher of probability & Bayesian decision theory - Directed and undirected models and their properties - Inference in tree graphs - Approximate inference in general graphs: Message passing and mean field - Learning of directed and undirected models - Sampling methods for learning and inference - Modeling in example applications, including topic models - Deep networks - Semi-supervised learning
2	**Learning objectives** After successfully attending the course, students have developed an in-depth understanding of probabilistic graphical models. They describe and analyze properties of graphical models, and formulate suitable models for concrete estimation and learning tasks. They understand inference algorithms, judge their suitability and apply them to graphical models in relevant applications. Moreover, they determine which learning algorithms are suitable to estimate the model parameters from example data, and apply these.
3	**Recommended prerequisites for participation** Recommended: Participation in “Statistisches Maschinelles Lernen”.
4	**Form of examination** Course related exam: • [20-00-0449-iv] (Technical examination, Oral/written examination, Default RS)

Courses

Course Nr. 20-00-0418-pr	**Course name** Lab Visual Computing		
Instructor		**Type** Internship	**SWS** 4

Module name Scale Space and PDE methods in image analysis and processing					
Module nr. 20-00-0469	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** Image analysis & processing deals with the investigation of images and the application of specific tasks on them, like enhancement, denoising, deblurring, and segmentation. In this course, mathematical methods that are commonly used are presented and discussed. The focus will be on the axiomatic choice for the models, their mathematical properties, and their practical use. Some key words: - Filtering (Edge detection, enhancement, Wiener, Fourier, ...) - Images & Observations: Scale space, regularisation, distributions - Objects: Differential structure, invariants, feature detection - Deep structure: Catastrophes & multi-scale hierarchy - Variational Methods & Partial Differential Methods: Perona Malik, anisotropic diffusion, total variation, Mumford-Shah, Chan-Vese, geometric PDEs, level sets - Curve Evolution: Normal motion, mean curvature motion, Euclidean shortening flow.
2	**Learning objectives** After successful participation in the course students are able to describe the foundational mathematical concepts as well as the basic models and methods of image analysis and processing. They explain important approaches for scale space and PDE methods and can evaluate, transfer, and explain representative technical papers.
3	**Recommended prerequisites for participation** Da Bildanalyse und -verarbeitung eine Mischung aus verschiedenen Disziplinen, wie Physik, Mathematik, Vision, Informatik und Engineering, ist, ist dieser Kurs gezielt auf ein breites Publikum zugeschnitten. Daher werden nur Grundkenntnisse in Analysis angenommen. Weitere notwendige mathematische Werkzeuge werden in den Sitzungen skizziert.
4	**Form of examination** Course related exam: • [20-00-0469-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0469-se] (Study achievement, Oral/written examination, Weighting: 100 %)

Language German/English			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1	**Teaching content** In this project the students will design concepts and implement prototypes in the field of serious games (e.g. in education, health and sports). The topics relate to current research questions in the field, partly in cooperation with partners from the games industry and/or Serious Games users.
2	**Learning objectives** After successfully attending the course, the students can conceptualize and prototypically implement practical tasks in the context of “Serious Games”. Additionally they acquire practical knowledge in the area of project management, which they can apply to their own topic as well as transfer it to future projects. Besides, the students are able to present their findings in front of an audience applying a number of different presentation techniques and to actively participate in a scientific discussion on their topic.
3	**Recommended prerequisites for participation** Programming skills (the language will depended on the topic and may be chosen at will for certain topics).
4	**Form of examination** Course related exam: • [20-00-0649-pp] (Study achievement, Oral/written examination, Default RS)

Module nr. 20-00-0344	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Bernt Schiele		

1	**Teaching content** The students will be enabled to create animations of algorithms and data structures to enhance the learning process. The contents will be usable for studying the topics covered and can be used in the ICS / GdI 2 lecture. The competencies gained especially include: * Becoming familiar with a complex software system for animating algorithms and data structures * Familiarization with a scripting language, a Java-based API and a framework for generators for creating animations. * Design and implementation of at least two generators for algorithm or data structure animations * Learning criteria for determining if animations support learning processes * Creation and provision of contents ready for use in teaching and self-study * Competent use of the CS learning platform for submitting feedback and finished tasks
2	**Learning objectives** After taking part in this lab, students will be able to... - use the provided API for animating algorithms. - analyze a given algorithm with regard to its central elements. - construct one visualization each for the central elements of two chosen algorithms. - generalize the generated visualizations by an appropriate support of adjustable parameters. - critically reflect whether the created visualization will support the learning process of the viewer.
3	**Recommended prerequisites for participation** Participants need good Java programming skills and should be familiar with the algorithms and data structures taught in ICS 2.
4	**Form of examination** Course related exam: • [20-00-0344-pr] (Study achievement, Oral/written examination, Default RS)

1	**Teaching content** Introduction to the topic of ""Serious Games"": scientific and technical foundations, application areas and trends. Individual lectures include: • Introduction to Serious Games • Game Development, Game Design • Game Technology, Tools and Engines • Personalization and Adaptation • Interactive Digital Storytelling • Authoring and Content Generation • Multiplayer Games • Game Interfaces and Sensor Technology • Effects, Affects and User Experience • Mobile Games • Serious Games Application Domains and Best Practice Examples The exercise consists of theoretical and practical parts. Students are taught how to use a Game Engine.
2	**Learning objectives** After successfully completing this course the students are able to explain the concept of “Serious Games” and can transfer it to different application domains (like education or health). They can describe the general approach for developing computer games and can apply basic principles of game design, personalisation / adaptation and interactive digital storytelling. Aside from that students are able to sketch out other current research questions regarding Serious Games as well as their solutions.
3	**Recommended prerequisites for participation**

Language German			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1	**Teaching content** Selected papers from the following fields of computer graphics: - Visualization / Rendering - Simulation - Geometry processing and modeling - Semantics and 3D
2	**Learning objectives** After successfully completing the course, students know selected current topics in computer graphics. They are able to independently analyze the content of a scientific publications, to understand and to present the problem as well as the proposed solution. Furthermore, they can analyze and present directions for further improvements in the area.
3	**Recommended prerequisites for participation** Prior knowledge of GDV or geom. methods of CAD/CAE is advantageous
4	**Form of examination** Course related exam: • [20-00-0724-se] (Study achievement, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-0724-se] (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik B.Sc. Computational Engineering M.Sc. Computational Engineering M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)**
9	**References** Will be given in seminar.

Module name User-Centered Design in Visual Computing					
Module nr. 20-00-0793	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1 Teaching content

Developing user-centered software leads to a more efficient usage and increases the acceptance by the human user. The higher acceptance leads to a better dissemination and exploitation of the developed solutions. The lecture "User Centered Design in Visual Computing" aims at enabling students from the department of computer science to acquire knowledge about models, methods, and techniques for user-centered development of visualizations and interactive visual representations. This course will introduce methods that lead to designing more efficient solutions with higher acceptance. Furthermore, the lecture will explain evaluation methods that allow measuring acceptance and efficiency. User Centered Design introduces the mentioned topics with a special focus on visual computing and graphical user interfaces.

Content:

- Usability
- User experience
- Task analysis
- User interfaces
- Interaction design
- Prototyping
- Graphics design and information visualization
- Evaluation during and after software development
- Applications and examples

2 Learning objectives

After a successful participation, students will be able to:

- Identify and argue about adequate methods for developing user-centered software
- Apply techniques for user-centered visual interfaces
- Identify and choose adequate evaluation methods for the chosen techniques in the different stages of software development
- Recommend improvements for information acquisition and navigation based on studies and evaluations

3 Recommended prerequisites for participation

- Basics of visual computing, as e.g. taught in the introductory course HCS and in the course GDV I

4 Form of examination

Course related exam:

- [20-00-0793-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

6 Grading

Course related exam:

- [20-00-0793-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

	B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT M.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.
8	**Grade bonus compliant to §25 (2)** In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

Module name Physically based Simulation and Animation					
Module nr. 20-00-0682	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German/English			**Module owner** Prof. Dr.-Ing. Michael Gösele		

1	**Teaching content** - Basics of physically based simulation and animation - Equations of motion and modeling of rigid bodies, mass-spring systems, deformable bodies and fluids - Approximate numerical methods for the efficient solution of ordinary and partial differential equations - Parallel computing for physically based simulations - Collision detection and resolution
2	**Learning objectives** After completing the module successfully, the students can - Describe requirements for methods of physically based simulations for computer animation - Apply concepts of physically based simulations - Transfer learned concepts to other simulation applications - Evaluate the suitability of algorithms and numerical methods for physically based simulation - Describe open research questions in physics-based simulation and animation
3	**Recommended prerequisites for participation** - Basic knowledge of numerical computing, algorithms and data structures, computer graphics
4	**Form of examination** Course related exam: • [20-00-0682-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam of Modul (100%)
6	**Grading** Course related exam: • [20-00-0682-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik Can be used in other degree programs.

Courses

Course Nr. 20-00-0682-iv	**Course name** Physically based Simulation and Animation	
Instructor Prof. Dr.-Ing. Michael Gösele	**Type** Integrated course	**SWS** 4

Module name Hands-On HCI					
Module nr. 20-00-1116	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language English			**Module owner** Prof. Dr. Arjan Kuijper		

1	**Teaching content** You might have previously heard of or even tried out virtual/augmented reality, 3D printing, wearable or tangible user interfaces. The area of Human-Computer Interaction covers all these exciting topics and offers an opportunity to build new prototypes and try them out with people in the user studies. If you would like to better connect theory and practice in the area of Human-Computer Interaction (HCI), then the course of Hands-On Human-Computer Interaction (Hands-On HCI) is for you. The goal of the class is to walk you through the whole research cycle in HCI. It can play a great preparation role for your future bachelor/master thesis in HCI or lay a first brick in your academic path after finishing your studies.
2	**Learning objectives** After completing the module, students can - differentiate between and apply three approaches to HCI research. - distinguish three types of empirical research. - effectively read a scientific publication. - differentiate between types of HCI contributions. - Formulate and define research questions, hypotheses and experimental variables. - create a suitable study design based on the previously developed research questions. - conduct a study using quantitative and qualitative methods to collect data. - Analyze, evaluate and interpret quantitative data on the basis of statistical methods. - Analyze and interpret qualitative data on the basis of grounded theory. - Understand the peer review process and write reviews for a scientific publication. - Understand and apply evaluation techniques with and without users. - Write the knowledge gained as a scientific publication and present it to a specialist audience.
3	**Recommended prerequisites for participation** Recommended: Human-Computer Interaction (TK2)
4	**Form of examination** Course related exam: • [20-00-1116-iv] (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Pass exam (100%)
6	**Grading** Course related exam: • [20-00-1116-iv] (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** B.Sc. Informatik M.Sc. Informatik May be used in other degree programs.

2.8 Optional Subjects AIS-EC: Economics

Please note that the following modules are availably only in the Master of Science: 01-22-0M05/6, 01-63-0M02/6, 01-14-6200/6

Module name Introduction to Business Administration					
Module nr. 01-10-1028/f	**Credit points** 3 CP	**Workload** 90 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. rer. pol. Dirk Schiereck		

1	**Teaching content** This course serves as an introduction into studies of business administration for students of other siences. The course will provide a broad spectrum of knowledge from the "birth" of business administration as an university science field until its fragmentation into many specialized disciplines. Core topics will include basics of business administration (definitions and German legal forms), some Marketing concepts, introduction into Production Management (business process optimization and quality management), basic knowledge of organisational and personnel related topics, fundamental concepts of finance and investment as well as internal and external reporting standards.
2	**Learning objectives** The couse encourages students who have not been confronted with business studies before to think economicially. Furthermore, it should enable students to better understand actions of managers and corporations in general. After the course students are able to • comprehend the development in the history of business administration, • apply essential marketing concepts, • use fundamental methods in production management, • economically valuate investment alternatives and • understand important interrelations in financial accounting.
3	**Recommended prerequisites for participation** None
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Default RS)
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module**
8	**Grade bonus compliant to §25 (2)**
9	**References**

1 Teaching content

Accounting: Fundamentals of accounting based on the rules of the German Commercial Code (HGB), accounting concepts, purpose of accounting, bookkeeping, inventory, recognition and measurement of assets and liabilities, income statement, notes, management report

Financing: Financial decision-making by corporations faces two broad financial questions: What investments should the firm make? And how should it pay for those investments? The focus of the first question involves spending money; the second involves raising it

2 Learning objectives

After the courses the students are able to

- understand the steps prior to the preparation of annual financial statements according to the German Com-mercial Code (HGB).
- analysze the recognition and measurement of assets and liabilities.
- understand income statements, notes and management reports.
- solve accounting cases in the context of the German Commercial Code (HGB).
- understand financial decision-making processes by individuals.
- apply simple tools for rational financial decision-making.

3 Recommended prerequisites for participation

Bookkeeping

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

1	**Teaching content** Students will be taught in the field of management. In addition students will be teach in the usage of management instruments and methods. They will learn how to use the instruments in the broad field of business management. In marketing students will learn about basics, strategic basics, and perspectives of marketing. Furthermore, they will learn about the institutional perspective of marketing.
2	**Learning objectives** After the course students are able to • implement basic knowledge in the management of companies. • impart theoretical knowledge and possibilities of implementation. • connect the different fields of knowledge in management and marketing. • know about basic knowledge of marketing theories and concepts and to apply theories and concepts on extant problems in marketing practice.
3	**Recommended prerequisites for participation** Grundlagen der Betriebswirtschaftslehre I und II

Language German/English			**Module owner** Prof. Dr. rer. pol. Christoph Glock		

1 Teaching content

Operations Research: Basic terms and development of operations research, optimization models, linear programming (Simplex - algorithms, duality, transportation problems), fundamentals of graph theory, project planning, solution principles of mixed integer and combinatorial optimisation, dynamic optimization, OR and spreadsheet analysis (Excel), standard OR software, fundamentals of simulation

Production and Supply Chain Management: Introduction (basics, production and supply chain types, modeling, planning), strategic and tactical planning (planning concepts, design of production systems and supply chains), mid-term operational planning (forecasting, aggregate production planning, master planning), short-term operational planning (material requirements planning, lot-sizing, job release and scheduling, inventory management)

2 Learning objectives

After the courses the students are able to

- describe decision problems in terms of mathematical optimization models.
- understand fundamental mathematical methods to solve such optimization models and to assess its versatility to solve certain classes of optimization models.
- to apply modern standard software of operations research.
- to identify the most important concepts and problems for production planning.
- to apply basic solution methods on their own.
- describe computer-based concepts for production planning and control.
- judge the possible application of commercial software such as Enterprise Resource Planning or Advanced Planning Systems.

3 Recommended prerequisites for participation

Grundlagen der Betriebswirtschaftslehre I und II

4 Form of examination

Module exam:

1 Teaching content

Economic and financial policy:

- Efficiency and equity as objectives for economic policy making
- Market failures and policy implications
- Fiscal policies
- Rule-based versus discretionary monetary policy
- Collective decisions
- Theory of economic policy reforms

2 Learning objectives

After the course students are able to

- identify goals of economic policy making and to compare them critically.
- explain the various proliferations of market failure, devise economic policies, and evaluate them on the backdrop of the goals of economic policy making.
- describe fiscal and monetary policies and to reason about their application.
- understand the problem of collective decisions and apply simple models of collective decision making to the area of economic policy reforms.

3 Recommended prerequisites for participation

Prerequisites: none

Previous Knowledge: see initial skills and basics in economics

4 Form of examination

Module exam:

Module name Management Accounting					
Module nr. 01-14-6200/6	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. rer. pol. Reiner Quick		

1 Teaching content

Strategic Management Accounting: Objectives of management accounting, overview of operational management accounting, concept of strategic management accounting, instruments to prepare future prospects, instruments to analyze strategic business environment (e. g. PEST analysis, Porter's Five Forces, SWOT analysis), instruments to develop strategies for business segments (e. g. Porter's generic strategies, portfolio analyses)
Operational Management Accounting: Introduction: basic principles - budgeting and deviation analysis, activity based costing, innovation controlling: target costing, life cycle costing, controlling with key performance indicators and balanced scorecard

2 Learning objectives

After the courses the students are able to

- understand the functions, objectives and challenges of management accounting.
- evaluate the benefits and limitations of management accounting instruments.
- evaluate the pros and cons of innovation management accounting.
- explain different decisions of management accounting from a theoretical perspective and search for solutions.

3 Recommended prerequisites for participation

Prerequisites: none
Previous Knowledge: see intial skills

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points

Passing the Examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

M.Sc. Wirtschaftsingenieurwesen, M.Sc. Wirtschaftsinformatik, M.Sc. Entrepreneurship and Innovation Management, M.Sc. Logistics and Supply Chain Management

8 Grade bonus compliant to §25 (2)

Module nr. 01-15-1027/12	**Credit points** 12 CP	**Workload** 360 h	**Self study** 240 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. rer. pol. Peter Buxmann		

1 Teaching content

IT-Project Management:

- Definition of Project and Management
- Tasks of the project management
- Phases and processes of project management
- work breakdown structure
- Project scheduling
- Project Risk Management
- Project Controlling
- Characteristics of IT projects

IT-Project Management practical course:

- Experience with autonomous implementation of a software project under practice-oriented conditions,
- to train the use of modern development methods and tools,
- To get soft skills in dealing with clients and with other team members,
- fulfill various tasks within the project team.

2 Learning objectives

After the course students are able to

- Name and define relevant terms regarding IT project management (e.g. project, IT project, stakeholder)
- Explaine relevant concepts and models regarding IT project management (e.g. sequential and agile process models, open source)
- Apply planning methods (e.g. GANTT diagrams) and estimate time requirements
- Apply modern development methods
- Organize IT projects and evaluate available solutions

3 Recommended prerequisites for participation

Prerequisites: none

Previous Knowledge: see intial skills

- IT-Project Management: General knowledge of business studies
- IT-Project Management practical course: Basic Knowledge of process, data and object modeling (according to study plan), knowledge of at least one computer language.

4 Form of examination

Course related exam:

- [01-15-0004-pr] (Study achievement, Presentation, Default RS)
- [01-15-0003-vl] (Technical examination, Written examination, Duration: 90 Min., Default RS)

Supplement to Assessment Methods:

IT Project Management - practical course: Written paper and presentation (participation in discusson).

5 Prerequisite for the award of credit points

Passing the examination

6 Grading

	Course related exam: • [01-15-0004-pr] (Study achievement, Presentation, Weighting: 75 %) • [01-15-0003-vl] (Technical examination, Written examination, Weighting: 25 %)

1	**Teaching content** The lecture Technology and Innovation Management is designed for the students to learn about the challenges of managing innovation. Organizational change and innovation are the basic requirements for competitiveness and success of businesses. However, in most industries innovation is often paired with organizational challenges and barriers. In this lecture, students get to know the fundamental concepts and design of Innovation Management and the innovation process (form initiative to implementation), as well as the interaction of central actors. Furthermore, this lecture provides insights into the specialisations Innovation Behaviour and Strategic Technology and Innovation Management.
2	**Learning objectives** After the course the students are able to • identify and evaluate problems emerging from managing innovation. • explain, evaluate and apply theories of Technology and Innovation Management. • evaluate fundamental design factors of corporate innovation systems. • derive improvement procedures for innovation processes in firms. • apply tools of technology management. • make relevant recommendations for corporate practice.
3	**Recommended prerequisites for participation** Prerequisites: none Previous Knowledge: see initial skills
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Default RS) Supplement to Assessment Methods Oral/written: Type and duration of exam are announced by the beginning of the course Written: exam (duration 60 - 90 minutes) Oral: team or individual exam (duration 15 - 20 minutes per participant)
5	**Prerequisite for the award of credit points** Passing the Examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

1	**Teaching content** The lecture offers students an introduction to the topic of innovation management in companies. In times of disruptive and radical innovations, well-founded knowledge in innovation management is an elementary core competence of companies in order to stay competitive. After learning the conceptual basics, students learn about managing the different stages of the innovation process, from initiative to the adoption of an innovation. In addition, strategic aspects and the human side of innovation management will be introduced. The lecture thus forms an excellent thematic orientation and introduction for undergraduate students for the advanced courses of the master studies.
2	**Learning objectives** After the course students are able to • give an overview of the components of the innovation process and management. • identify and evaluate problems that arise in the management of innovations. • explain, evaluate and apply theories of technology and innovation management. • assess the basic design factors of a firm's innovation system. • derive actions to improve innovation processes in companies. • apply the concepts to practice-relevant questions.
3	**Recommended prerequisites for participation** Prerequisites: none Previous Knowledge: see initial skills and basics in business administration
4	**Form of examination** Module exam: • Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)

1 Teaching content

This course serves as an introduction into studies of business administration for students of other siences. The course will provide a broad spectrum of knowledge from the "birth" of business administration as an university science field until its fragmentation into many specialized disciplines. Core topics will include basics of business administration (definitions and German legal forms), some Marketing concepts, introduction into Production Management (business process optimization and quality management), basic knowledge of organisational and personnel related topics, fundamental concepts of finance and investment as well as internal and external reporting standards.

2 Learning objectives

The couse encourages students who have not been confronted with business studies before to think economically. Furthermore, it should enable students to better understand actions of managers and corporations in general.

After the course students are able to

- comprehend the development in the history of business administration,
- apply essential marketing concepts,
- use fundamental methods in production management,
- economically valuate investment alternatives and
- understand important interrelations in financial accounting.

3 Recommended prerequisites for participation

None

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Passing the examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Language German/English			**Module owner** Prof. Dr. jur. Janine Wendt		

1 Teaching content

The lecture provides a broad insight into the most important legal fields of daily life - e.g.:

- The law of sales contracts
- Tenancy law
- Family law
- Employment law
- Corporate law etc.

These will be illustrated by means of practical cases. Important points of how to frame a contract will be discussed.

2 Learning objectives

The students will acquire knowledge of the basic principles of German civil law.

3 Recommended prerequisites for participation

Module name Venture Valuation					
Module nr. 01-27-2M01/6	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr. rer. pol. Carolin Bock		

1	**Teaching content** In the course, special attention is put on valuation techniques for start-up companies (ventures) while also considering the special environment these firms operate in. Students will receive an overview of different valuation techniques applicable for the valuation of entrepreneurial ventures. The course will elaborate on generic and commonly used practices but also introduce students into case-specific valuation methods. Further, standard valuation methods will be analysed as to their applicability in different contexts. Valuation methods include the discounted cash flow and multiple approach. In addition, context-specific approaches to new venture valuation are considered. Furthermore, students are offered the opportunity to collect hands-on experience while applying the methods taught in exercises and case studies.
2	**Learning objectives** After the course students are able to, • Objectives: Students gain in-depth knowledge on theoretical concepts and methods in the field of valuing young companies. After the course, students are able: • to understand different valuation methods for young companies and to apply them according to practical examples, • to discuss the advantages and disadvantages of valuation techniques for young companies, • to understand the challenges of determining "the right value" for young companies.
3	**Recommended prerequisites for participation** Prerequisites: none Previous Knowledge: see initial skills
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Default RS) Supplement to Assessment Methods Oral/written: Type and duration of exam are announced by the beginning of the course Written: exam (duration 60 - 90 minutes) Oral: team or individual exam (duration 15 - 20 minutes per participant)
5	**Prerequisite for the award of credit points** Passing the Examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

1 Teaching content

Digital Product and Service Marketing: Selected topics in the context of digital marketing; including micro and macro environment, digital marketing strategies, the digital marketing mix, digital relationship marketing, communication strategies and channels for digital customers, and evaluation of approaches.

Digital Innovation Marketing:Selected topics in the context of digital innovation marketing, including basic information about innovation, key innovation strategies; important theoretical concepts of innovation management; customer integration in the innovation process; and new innovation types, such as user innovation.

2 Learning objectives

After the course students are able to

- recognize the role of digitization for marketing and to estimate potentials.
- evaluate approaches in the context of digital marketing.
- explain different phases and tools for digital marketing.
- explain the process and the organizational design elements of a holistic and customer-oriented innovation management.
- recognize the potential of user innovations and co-opetition
- critically reflect on ethical aspects of marketing.
- apply the concepts and instruments dealt with to practice-oriented questions using specific examples.
- transfer the learned contents to business practice through guest lectures.

3 Recommended prerequisites for participation

Marketing

Sufficient English skills to follow the lecture in English and to understand and answer the English-language written exam.

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points

Passing the Examination

6 Grading

Courses

Course Nr. 01-17-0005-vu	**Course name** Digital Product and Service Marketing		
Instructor ERROR ERROR ERROR, Prof. Dr. rer. pol., Dr. phil. Ruth Stock-Homburg		**Type** Lecture and practice	**SWS** 2
Course Nr. 01-17-0007-vu	**Course name** Digital Innovation Marketing		
Instructor ERROR ERROR ERROR, Prof. Dr. rer. pol., Dr. phil. Ruth Stock-Homburg		**Type** Lecture and practice	**SWS** 2

Module name Leadership and Human Resource Management Systems					
Module nr. 01-17-6201/6	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr. rer. pol., Dr. phil. Ruth Stock-Homburg		

1 Teaching content

Leadership:

- Central approaches and theories of employee and team leadership
- Methods of leadership research
- Success factors of employee leadership
- Leadership of the future
- Special application areas of leadership (e.g. regional distributed or virtual leadership)

Future of Work:

- Influence of new technologies and digitization on the world of work
- Future development and design approaches in human resources management
- Approaches to measuring the sustainability of companies and individuals
- Special challenges of the future of work (e.g. telework/well-being, electronic accessibility, new technologies)

2 Learning objectives

After the course students are able to,

- explain, compare and contrast the key theoretical concepts of employee and team leadership.
- apply the instruments and tools available for leading employees and teams.
- assess the challenges of leading employees and teams in an international environment.
- explain important theories, techniques, and concepts about the future of work.
- interpret and reflect on important parameters for the Future Fitness of employees, leaders, and companies.
- better assess where they personally stand in terms of their individual Future Fitness and face the future of work with curiosity.
- reflect on challenges in the future of work.
- apply learned concepts and instruments in case studies.
- connect their knowledge to business cases in presentations of experienced practitioners.

3 Recommended prerequisites for participation

Sufficient English skills to follow the lecture in English and to understand and answer the English-language written exam.

4 Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points

Passing the Examination

6 Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

	M.Sc. Wirtschaftsingenieurwesen, M.Sc. Wirtschaftsinformatik, M.Sc. Entrepreneurship and Innovation Management, M.Sc. Logistics and Supply Chain Management
8	**Grade bonus compliant to §25 (2)**
9	**References** Stock-Homburg, R. & Groß, M. (2019), Personalmanagement: Theorien - Konzepte - Instrumente, Wiesbaden, 4th Edition, Kap. IV. Stock-Homburg, R. Courses

Course Nr. 01-17-0004-vu	**Course name** Leadership		
Instructor Dr. rer. pol. Gisela Gerlach		**Type** Lecture and practice	**SWS** 2
Course Nr. 01-17-0008-vu	**Course name** Future of Work		
Instructor ERROR ERROR ERROR, Prof. Dr. rer. pol., Dr. phil. Ruth Stock-Homburg		**Type** Lecture and practice	**SWS** 2

Module name German and International Corporate Law					
Module nr. 01-42-1B01/4	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. jur. Janine Wendt		

1 Teaching content

The lecture is divided into two parts: The first part is an introduction to commercial law. The aim is to understand the importance of contract drafting in a company and to take into account the main aspects of commercial law regulations. The second part is devoted to company law, in particular the law of commercial partnerships and corporations. It also deals with the basic issues of good corporate governance and the importance of compliance. European company law will also be introduced.

Recitation: This course discusses practical cases concerning commercial law and general company law. In preparation for the exam, sample cases will be discussed.

2 Learning objectives

After the course students are able to

- recognise the conditions for the application of commercial law.
- distinguish between the different commercial intermediaries.
- understand the basic structures of the most important forms of partnerships and corporations as legal entities for companies.
- understand the importance of good corporate governance and the importance of compliance for companies.
- deal with different legal texts.
- understand the significance of European legal developments for German law and in particular for the protection of investors.
- understand the context of legal regulations (e.g. sales law + commercial law + company law).
- work on simple facts of the German commercial and company law, as well as the financial market law by applying a legal approach and to compile answers to simple legal questions independently.
- generally recognise, assess and respond to the possibilities and risks of liability in legal matters.

3 Recommended prerequisites for participation

Prerequisites: none
Previous Knowledge: see initial skills and contract law

4 Form of examination

Module exam:

- Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the Examination

6 Grading

Module exam:

- Module exam (Technical examination, Written examination, Weighting: 100 %)

7 Usability of the module

B.Sc. Wirtschaftsingenieurwesen, B.Sc. Wirtschaftsinformatik

8 Grade bonus compliant to §25 (2)

1 Teaching content

Specific topics in a focus area law and economics or informations management.

2 Learning objectives

After the course/s the students are able to

- identify a specific topic in the fields of business studies, economics or law or information management and elaborate it by means of scientific methods.
- research, identify and exploit relevant literature (particularly research literature in English).
- structure the topic and establish a line of arguments.
- evaluate pros and cons in a comprehensible way.
- record the results according to scientific criteria.
- present the topic to the group and discuss it.

3 Recommended prerequisites for participation

Background knowledge: see initial skills and defined by indiviudal examiner and announced in advance.

4 Form of examination

Course related exam:

- [01-01-0M01-se] (Technical examination, Presentation, Default RS)

Supplement to Assessment Methods

Written paper and presentation (participation in discusson)

5 Prerequisite for the award of credit points

Passing the Examination

6 Grading

Course related exam:

Courses

Course Nr. 01-01-0M01-se	**Course name** Master Seminar	
Instructor	**Type** Seminar	**SWS** 2

Module name Project Management					
Module nr. 01-19-1350/6	**Credit points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language English			**Module owner** Prof. Dr. rer. pol. Andreas Pfnür		

1	**Teaching content** Project management I: Basics of planning and decision making for projects, project goals, generation of project alternatives, separation basics in configuration management, project definition, program - portfolio, stake-holder management and communication, quality management, scope and change management, human re-sources management for projects / project managers Project management II: Strategic goals, separation and linking of projects; project portfolio planning; multi project management; organizational structures of multi project management; tools to select project alterna-tives; tools for project controlling; project management as professional service.
2	**Learning objectives** After the course students are able to • understand the strategic goals of project management, the methods of choosing realization alternatives and the methods of project controlling • understand the various subsystems of project management (e.g. Configuration Management, Human Resource Management, Stakeholder Management, Risk Management) • understand the principles, methods and organization of multi project management
3	**Recommended prerequisites for participation** Prerequisites: none Previous Knowledge: see initial skills
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral/written examination, Default RS) Supplement to Assessment Methods Oral/written: Type and duration of exam are announced by the beginning of the course Written: exam (duration 60 - 90 minutes) Oral: team or individual exam (duration 15 - 20 minutes per participant)
5	**Prerequisite for the award of credit points** Passing the Examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** M.Sc. Wirtschaftsingenieurwesen, M.Sc. Wirtschaftsinformatik, M.Sc. Entrepreneurship and Innovation Manage-ment, M.Sc. Logistics and Supply Chain Management
8	**Grade bonus compliant to §25 (2)**
9	**References** Project Management Institute (2013): A Guide to the Project Management Body of Knowledge (PMBOK Guide) 5th Edition Further literature will be announced in the lecture.
Courses	

	Course Nr. 01-19-0001-vu	**Course name** Project Management I		
	Instructor		**Type** Lecture and practice	**SWS** 2

Module name Financial Accounting and Reporting					
Module nr. 01-14-1B01	**Credit points** 5 CP	**Workload** 150 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. rer. pol. Reiner Quick		

1	**Teaching content** Financial Accounting: Fundamentals of accounting and bookkeeping, inventory, balance sheet, recording of assets and debt, recording of expenses and revenues, selected transactions (sales and purchases, non-current assets, current assets, accruals, wage and salary, distribution of earnings), annual closing entry. Financial Reporting: Fundamentals of accounting based on the rules of the German Commercial Code (HGB), accounting concepts, purpose of accounting, bookkeeping, inventory, recognition and measurement of assets and liabilities, income statement, notes, management report.
2	**Learning objectives** After the course students are able to • understand the core principles of bookkeeping, inventory and preparation of the balance sheet • book stocks and profit • solve specific bookkeeping problems in the fields of sales and purchases, non-current and current assets, accruals, wage and salary, distribution of earnings • understand of the steps prior to the preparation of annual financial statements according to the German Commercial Code (HGB) • analyze of the recognition and measurement of assets and liabilities • understand of Income statements, notes and management reports • solve accounting cases in the context of the German Commercial Code (HGB)
3	**Recommended prerequisites for participation** Prerequisites: none Previous Knowledge: see initial skills
4	**Form of examination** Module exam: • Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS) • Module exam (Study achievement, Oral/written examination, Duration: 45 Min., Default RS) Supplement to Assessment Methods: The academic achievement needs to be passed to take part in the module exam.
5	**Prerequisite for the award of credit points** Passing the Examination
6	**Grading** Module exam: • Module exam (Technical examination, Written examination, Weighting: 2) • Module exam (Study achievement, Oral/written examination, Weighting: 1)
7	**Usability of the module** B.Sc. Wirtschaftsingenieurwesen, B.Sc. Wirtschaftsinformatik

2.10 Optional Subjects AIS-TE: Technology

Module name Microelectronic Devices					
Module nr. 18-pr-1030	**Credit points** 4 CP	**Workload** 120 h	**Self study** 75 h	**Module duration** 1 Term	**Module cycle** Winter term
Language German			**Module owner** Prof. Dr. rer. nat. Sascha Preu		

1	**Teaching content** 1. Introduction: Semiconductor Devices & Microelectronic 2. Semiconductor: Materials, Physics & Technology 3. PN-Junction 4. Metal-Oxide-Semiconductor Capacity 5. Schottky Contact 6. MOS-Field-Effect-Transistor (MOSFET) 7. CMOS: Digital Applications 8. MOS-Memory 9. Bipolar- Junction-Transistor 10. Outlook: Scaling Limits & SET,...
2	**Learning objectives** • Understand the physical properties and processes in semiconductor devices and materials • the operation of basic semiconductor devices like diode, MOS-Transistor and bipolar transistor • Understand functionality of basic circuits like rectifier circuit , 1-transistor amplifier and inverter from the device point of view. • Goal: Understand state-of-the art semiconductor devices and circuits as a basis for a successful engineering career
3	**Recommended prerequisites for participation** Electrical Engineering and Information Technology I, Electrical Engineering and Information Technology II, Laboratory ETiT, Laboratory Electronics, Mathematics I, Mathematics II, Physics
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** BSc ETiT
8	**Grade bonus compliant to §25 (2)**

Language German			**Module owner** Prof. Ph.D. Thomas Burg		

1	**Teaching content** To explain production processes of parts like: casting, sintering of metal and ceramic parts, injection moulding, metal injection moulding, rapid prototyping, to describe manufacturing processes of parts like: forming processes, compression moulding, shaping, deep-drawing, fine cutting machines, ultrasonic treatment, laser manufacturing, machining by etching, to classify the joining of materials by: welding, bonding, soldering, sticking, to discuss modification of material properties by: tempering, annealing, composite materials.
2	**Learning objectives** Provide insights into the various production and processing methods in micro- and precision engineering and the influence of these methods on the development of devices and components.
3	**Recommended prerequisites for participation**
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** BSc ETiT, MSc MEC, MSc WI-ETiT
8	**Grade bonus compliant to §25 (2)**
9	**References** Script for lecture: Technology of Micro- and Precision Engineering

Courses

	Course Nr. 18-bu-1010-vl	**Course name** Technology of Micro- and Precision Engineering		
	Instructor M.Sc. Niko Faul, Prof. Ph.D. Thomas Burg		**Type** Lecture	**SWS** 2
	Course Nr. 18-bu-1010-ue	**Course name** Technology of Micro- and Precision Engineering		
	Instructor M.Sc. Niko Faul, Prof. Ph.D. Thomas Burg		**Type** Practice	**SWS** 1

Module name					
Sensor Technique					
Module nr.	**Credit points**	**Workload**	**Self study**	**Module duration**	**Module cycle**
18-kn-2120	4 CP	120 h	75 h	1 Term	Winter term
Language			**Module owner**		
German			Prof. Dr. Mario Kupnik		

1	**Teaching content**
2	**Learning objectives** The Students acquire knowledge of the different measuring methods and their advantages and disadvantages. They can understand error in data sheets and descriptions interpret in relation to the application and are thus able to select a suitable sensor for applications in electronics and information, as well process technology and to apply them correctly.
3	**Recommended prerequisites for participation** Measuring Technique
4	**Form of examination** Module exam: • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc WI-ETiT, MSc MEC, MSc Medizintechnik
8	**Grade bonus compliant to §25 (2)**
9	**References** • Slide set of lecture • Script of lecture • Textbook Tränkler „Sensortechnik“, Springer • Exercise script

Module name Introduction 3D-Printing and Additive Manufacturing					
Module nr. 16-17-3253	**Credit points** 4 CP	**Workload** 120 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Every 2. Semester
Language German			**Module owner** Prof. Dr. Edgar Dörsam		

1	**Teaching content** Terminology, process chains, process types, industrial technologies, materials, design, engineering strength, data workflow and data models, potential
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Explain all terms of 3D-Printing and Additive Manufacturing. 2. Follow through with a systematic comparison of alternative production methods. 3. Analyze the influence of the materials on the quality of products. 4. Explain the design demands of 3D-parts. 5. Distinguish important aspects of CAD models and voxel models. 6. Show and discuss the potentials of Additive Manufacturing.
3	**Recommended prerequisites for participation** Recommended modules are: 16-09-5010 Production Technology, 16-08-3241/5251 Material Science & Engineering I and II, 16-07-3011 Information and Communication Technology in Mechanical Engineering and 16-07-5020 Computer Aided Design.
4	**Form of examination** Module exam: • Module exam (Technical examination, Optional, Default RS) Facultative (written 90 min or oral exam 30 min) Will be announced at the beginning of the term depending on the circumstances (number of students, pandemic etc.).
5	**Prerequisite for the award of credit points** Passing the examination
6	**Grading** Module exam: • Module exam (Technical examination, Optional, Weighting: 100 %)
7	**Usability of the module** WP Bachelor MB
8	**Grade bonus compliant to §25 (2)**
9	**References** The current lecture notes can be downloaded from the moodle web pages while the semester is in session.

Courses

	Course Nr. 16-17-3253-vl	**Course name** Introduction 3D-Printing and Additive Manufacturing	
	Instructor	**Type** Lecture	**SWS** 2

Module name Tutorial in 3D-Printing					
Module nr. 16-17-3264	**Credit points** 4 CP	**Workload** 120 h	**Self study** 60 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German			**Module owner** Prof. Dr. Edgar Dörsam		

1	**Teaching content** Classification of 3D printing in manufacturing technology; requirements; selection; workflow; independent realization of products; justification of approach and chosen production process
2	**Learning objectives** On successful completion of this module, students should be able to: 1. Identify application areas for 3D printing. 2. Choose a suitable 3D printing production process to manufacture parts. 3. Modify part geometry regarding the specific production process. 4. Use common software from the 3D printing workflow. 5. Analyze typical printing errors and modify print parameters. 6. Justify the chosen approach in written form.
3	**Recommended prerequisites for participation** Participation of lecture „Introduction 3D-Printing and Additive Manufacturing“
4	**Form of examination** Module exam: • Module exam (Technical examination, Special form, Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Special form, Weighting: 100 %)
7	**Usability of the module**
8	**Grade bonus compliant to §25 (2)**
9	**References** Gebhardt, Andreas. 3D-Drucken: Grundlagen und Anwendungen des Additive Manufacturing (AM). Carl Hanser Verlag GmbH Co KG, 2014. http://www.hanser-elibrary.com/isbn/9783446442382

Module name					
Lighting Technology I					
Module nr.	**Credit points**	**Workload**	**Self study**	**Module duration**	**Module cycle**
18-kh-2010	5 CP	150 h	90 h	1 Term	Winter term
Language			**Module owner**		
German			Prof. Dr.-Ing. Tran Quoc Khanh		

1	**Teaching content** Structure and functionality of the human eye, terms and unit in lighting technology, photometry, radiometric and photometric properties of materials, filters, physiology of vision, colour theory, lighting, light sources. Measurement of luminous flux, luminous intensity, illuminance, luminance, determination of the spectral responsivity function of the human eye, colorimetry colour rendering, colour as traffic signals, measuring of optical material characteristics, LED properties
2	**Learning objectives** To list and connect terms, units and radiometric and photometric properties of materials in lighting technology, to describe and understand structure and functionality of the human eye and the physiology of vision, to illustrate basics of lighting, measuring methods and application. Being able to measure base items in lighting technology, applying knowlegde of lighting and enhance them with experiments. Developing a better understanding for light and color.
3	**Recommended prerequisites for participation** MSc ETiT, MSc Wi-ETiT, MSc MEC
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc Wi-ETiT, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** Script for lecture: Lighting Technology I Excersisebook: laboratory: lighting technology I

Instructor M.Sc. Babak Zandi, Prof. Dr.-Ing. Tran Quoc Khanh		**Type** Internship	**SWS** 2

Module name Advanced Lighting Technology					
Module nr. 18-kh-2020	**Credit points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Module duration** 1 Term	**Module cycle** Summer term
Language German			**Module owner** Prof. Dr.-Ing. Tran Quoc Khanh		

1	**Teaching content** Chosen topics in lighting technology - current developments and applications: Street lighting, Physiology: Detektion / Glare / Lighing and Health, LED - Generation of white Light / State of the Art, Modern Methods of Light Measurement, Interiour Lighting, Display Technologies, Non-visual Light Impacts,UV-Applications, Automotive Lighting, Solar Modules.
2	**Learning objectives** To know current developments and applications, list and connect terms, to illustrate special topics of lighting, measuring methods and application. Beeing able to measure base items in lighting technology, applying knowlegde of lighting and dedicated applications and further to enhance them with experiments. Developing a better understanding for light, color, perception and lighting situations.
3	**Recommended prerequisites for participation** Lighting Technology I
4	**Form of examination** Module exam: • Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Technical examination, Oral examination, Weighting: 100 %)
7	**Usability of the module** MSc ETiT, MSc Wi-ETiT, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** Excercisebook: laboratory: lighting technology II

Module name Project seminar Spintronic Devices					
Module nr. 18-me-2030	**Credit points** 6 CP	**Workload** 180 h	**Self study** 135 h	**Module duration** 1 Term	**Module cycle** Every Semester
Language German/English			**Module owner** Prof. Dr. rer. nat. Markus Meinert		

1	**Teaching content** In the project seminar, students have the opportunity to deal with various aspects of spintronic devices. These range from the development of measurement systems for the characterization of spintronic devices, to the fabrication and characterization of functional thin film systems, to the lithographic preparation of spintronic sensor devices or memory cell (MRAM) prototypes. Students gain valuable insights into the entire chain of device fabrication from the deposition of atomically thin film systems to their basic characterization and lithography under clean room conditions.
2	**Learning objectives** Students learn the basics of fabrication and application of spintronic devices as sensors or magnetic memory cells. Individual projects are carried out in small groups. The students deepen the material learned in the lectures in the form of a project work and learn and deepen their knowledge in the application of electronic measurement technology to answer concrete questions from research and development.
3	**Recommended prerequisites for participation** • Introduction to Spintronics (desirable) • Materials of Electrical Engineering (desirable)
4	**Form of examination** Module exam: • Module exam (Study achievement, Oral/written examination, Default RS) Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.
5	**Prerequisite for the award of credit points** Passing the final module examination
6	**Grading** Module exam: • Module exam (Study achievement, Oral/written examination, Weighting: 100 %)
7	**Usability of the module** MSc iCE, BSc/MSc iST, MSc MEC
8	**Grade bonus compliant to §25 (2)**
9	**References** Lecture notes Introduction to Spintronics (Meinert), subject-specific literature and publications.
